Tropospheric index : This was nil within a 500 km radius (at the very least). I would expect much better results during a summer bandscan. I think it's critical to take note of the tropo index and include that when compiling a bandscan in FM List, otherwise it tends to be misleading. Accordingly, there is also a risk of losing credibility if it is not labeled appropriately.

Ideally if taking a bandscan during summer tropo, I would undertake a bandscan in a location I was familiar with. That way, it's much easier to discriminate between the permanent reception and the rest. If you are a long way from home on vacation (especially if you have to fly to get there!) this is of course completely impractical.

For me, it comes down to answering the question: What is the purpose of a bandscan? My answer would be that it is ultimately about assessing the suitability of any particular spot for DX.

So if that’s my target, my bandscan ideally would canvass:

* the number of 'empty' channels available;

* the ability of the terrain to attenuate nearby major broadcast sites (e.g. 25-30 km away);

* any effects of hills/mountains or waterways in creating/obscuring paths;

* testing noise levels (e.g. interference, urbanization/number of nearby households, nearby TX images etc.);

* different azimuths;

* signal strengths (e.g. RDS decoding levels) &

* antenna/receiver sensitivity testing.

I guess one could take this any of these factors to the absolute Nth degree, e.g. denote dBm signal strengths beside each logging or perhaps measure noise levels on completely empty channels and compare these with the city. I would only consider going to that trouble for a totally unpopulated location that might be truly exotic.

With only an hour maximum of laptop battery power I was fortunate to be able test the antenna on the W, NW & N azimuths. Normally on a mountain I rarely have time to test more than one azimuth, especially if using a car radio in a tourist spot. I guess that the average bandscan is probably always going to be biased toward particular directions. To be comprehensive, it might be worth noting the direction the car antenna/external antenna faced on a compass/GPS and include it with the bandscan. Having said that, I admit I have rarely remembered to do that!

Ideally, the goal (for me anyway) is to achieve a compromise between a bandscan ending up simply too generous (tempting, but potentially misleading) and just plain ‘dull’. A bandscan should involve little effort IMHO, otherwise you might as well punch in the coordinates into FM Scan and do a projection from the comfort of a warm house! (FM Scan projections are extremely useful of course; I would be lost without them).

At the end of the day, I dare say even compiling the most flawed or unconventional bandscan (especially in a remote location that nobody else has been to) into FM List is better than none at all!

Good DX!
Leigh

Hi Beat,

Did a test import with the new DXCC sql. All great apart from one thing ☐ I have 2 calls logged :

N1MY/KH2 and DF1NC/HC

Both of these were logged to their home countries i.e. K and DL, instead of KH2 and HC respectively.

Hope this helps.

73/Jim.

34191. Is this normal or enhancement?

Yahoo group: SkywavesDX (2014)
Date: 2014-08-28 20:05:14 UTC
From: sniffingmoose@...
Topic: 34191 Message: 34191

Hello

I am staying on the Lincolnshire coast at the moment, just 15 miles north of John. I went to Huttoft Car Terrace (near Sutton on Sea) at 6pm this evening.

On the car radio I heard:-

87.7 Radio 10 from Leystad - 223 miles
88.0 NPO Radio 2 from Smilde - 256 miles

95.6 BBC Radio Norfolk, from the low power West Runton.

97.3 LBC - it comes from Croydon I think.

It was pooring with rain at the time. None were up to RDS levels and all faded up and down. Smilde was the strongest.

Also Pontop Pike, Sutton Coldfield, and Wrotham were audiable.

I can see the empty band here is such an advantage.

Chris T

Hello Chris.

There's no tropo enhancement here at all but scatter is good. Nothing more than typical summertime conditions though. I am still getting used to knowing what conditions like at the new QTH as it's very different from the previous one. If anything I'd say the scatter is a little above average.

Scatter has been appalling for the last few weeks so it's been nice to have things back to normal again today. You timed your visit just right! Let me know if you come into Skegness.

Good DX!

John

34193. Re: [SkywavesDX] Re:: Bandscans

Yahoo group: SkywavesDX (2014)
Date: 2014-08-28 23:09:09 UTC
From: John Faulkner, Skegness
Topic: 33976 Message: 34193

That would be useful if Günter can add this.

I have already started work on adding a colour-coded system to my bandscan and will post as soon as I have decided which station fits into each category. This is not as easy as it seems.

In my interpretation I group stations thus:

1. Regular stations. These stations are constantly audible. They don't fade out. Locals and semi-locals.

Below these will be stations which come in via aircraft scatter. So:

2. Transmitters which are present virtually all the time, such as Lille, Langenberg, Egem and so on. They are present year round and only rarely drop out when conditions are VERY subdued. They typically reach RDS levels without
tropospheric enhancement. These are the 'bankers' or 'dead certs'.
3. Transmitters which are received via aircraft scatter on a daily basis but are below RDS thresholds. They are weaker than the 'bankers' and may not appear so often each day.
4. Transmitters which are received less commonly / even rarely via aircraft scatter. They are not daily occurrences.

Stable tropospheric enhancements, sporadic E, aurora, etc. would not be included. Although I see aircraft scatter as a mode of propagation, I see it as consistent enough to be considered 'regular' or even 'constant' in some cases.

I even tried to have some order of signal strength conversion from the XDR-GTK display. For instance, Anything below 15dBf I class as very weak. 15-24dBf = weak. 25-34dBf = Fair. 35-44dBf = Good. 45-54dBf = Very good. 55-64dBf - Strong. 65-74dBf = Very strong / excellent. Anything above that I think it would be reasonable to use the word "powerhouse". The sort of signals you cannot null, even with large beams. Belmont doesn't peak above 73dBf here, so it's not the strongest of signals of a local transmitter. At the low end of the scale, signals at 14dBf (very weak) can be virtually noise-free when the band is nice and quiet.

So this is my general rule of thumb but other DXers will have different opinions. It's going to be difficult for us all to be consistent with our bandscans. Hopefully there might be some guidelines included so people can report more accurately.

John

34196. OIRT - Belarus/Russia - UNID recording

Yahoo group: SkywavesDX (2014)
Date: 2014-08-29 08:53:14 UTC
From: davebunyan@...
Topic: 34196 Message: 34196

A brief, well focussed, opening delivered all the transmitters from Myzadel, Belarus at good strength, along with a couple of Russian stations in the Kalingrad.

I received the following on 70.22 - can anyone identify it? I missed the announcement which was "???? radio" and only got the short clip before it all faded out. LTU is a possible as it's in the same direction

Thanks

David

Noticed it. What a wonderful tool FM-List list is J

Using a RTL-SDR dongle and TVSharp I had a nice reception of Pershiy Natsionalniy, Ukraine on TV channel R2.

First real TV-DX reception since almost 25 years !

34203. Sony ST-SA5ES tuner

Yahoo group: SkywavesDX (2014)
Date: 2014-08-29 19:33:29 UTC
From: nick gilly
Topic: 34203 Message: 34203

I bought one of these on Monday from a seller in Germany and it arrived today so I have been putting it through its paces. I have been curious about these tuners as my first 'proper' tuner for DXing was an ST-SA3ES and this tuner is its 'big brother', so to speak. Apparently it has had some adjustments to the distortion levels (THD I assume and the signal strength readout - I was chatting to Andy about this in the Skywaves chat and he can probably explain this bit in more detail.

Anyway, it is very solidly built, weighing 6.3 kg (compared to the 4.5 kg for the SA3ES) and has the same set of features including full RDS (PS, PTY, CT, PI, Traffic, News, EON) and I must say it is good to have access to PI codes back again for the first time since late December 2006! A very useful feature, particularly during Sporadic E openings, of course. There are a couple of other minor features added on top of those on the SA3ES but not of relevance to DXing. The selectivity of this tuner is also a pleasant surprise, as it is definitely better than my old ST-SA3ES (a UK model) despite the selectivity specs for the SA3 and SA5 being the same. I wonder if the Euro models have slightly narrower filters installed than the UK ones (I'm not even sure if the SA5ES was available in the UK). Todd Emslie reports that the SA5 has 180 and 150 kHz filters installed and this sounds about right to me. I can tune 200 kHz either side of the Wrotham BBC nationals (about 27-28 dBf) without splatter, something that wasn't quite possible with my old SA3. Sensitivity as you would expect is excellent.

There is a slight quirk with this particular tuner (isn't there always?) in that there appears to be a small amount of 'MPX leakage' when mono is selected. So it doesn't quite shut down the stereo circuitry with the result that there is a low-level hiss on marginal signals and a vague sense of stereo separation. I seem to remember reading something about this on the Yahoo FM tuner forum regarding another Sony tuner but I can't remember where. It isn't a big problem though. I'd guess that something needs adjusting somewhere. Maybe it happened when the tuner was tweaked?

The sound quality is very good, but again, it seems to have a slightly rolled-off upper treble compared to the Denon TU-800L. It is more ruggedly built though and looks very attractive.

I was hoping to test it out during E-skip today so I could assess how quickly I could get PI codes and PS names from continuously varying signals but alas it was not to be as the Es cloud was just a little bit too far east for me to tap into. I hope there will be at least one more opportunity to test this before the end of the season.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

34204. A couple of UNIDs from tonight's Es

Very good scatter to the north-east today. Scatter has been well below
par for the last two or more weeks. This may well tie in with our recent
unseasonal weather. Unseasonal? I mean, how can we have temperatures of
freezing point and a ground frost in the middle of summer? It's a joke!

** Personal Skegness 'First' via this mode

I have removed a couple of Dutch stations, 87.9 Omroep Zeeland and 88.0 NPO2, from this log as I originally thought they were received via aurora. Their signals peaked to the NNW, the same direction as the aurora at the time, and sounded very scratchy. There was a definite distinction in directivity with their signals fading away completely between N and E and then returning to their regular scatter. After some studies I am still not 100% certain that they could just have been received 'off the back', so I have removed them from the log.

Good DX!

Hi John,

first recording sounds Roumanian to me and what I hear when they ID is "... opa FM" so it could be Radio Europa FM from Botosani.

The second one I think it's Polish with sport news (Vuelta a España, Tennis US Open and football Europa League) so it could be PR1 Krosno-Sucha Gora.

Alessandro
Trieste, Italy

Subject: [SkywavesDX] A couple of UNIDs from tonight's Es

Thanks if anybody can tell me who these are.

The first recording contains an ID but it came at the wrong time - on a fade! Part of it remains but I cannot make it out.

https://app.box.com/s/8tt95vhgbycifllll56ju

Thank you.

John

Thank you very much Alessandro. Very helpful.

I wondered if the second might have bee Polish, though this language always catches me out. I used to have Polish neighbours many years ago and I became familiar with many world s and sounds, or so I thought. Maybe they had strong accents. I didn't recognise anything in this brief recording. PR1 Krosno was in fact received shortly after this.

Best wishes!

John

good question re: Moldova
maybe a similar situation to Znad Wili 103.8 in Vilnius which i was
curious about.

do they have RDS? maybe people forget about MDA and assume they must
be hearing Romania?

you're nicely placed for MDA but its tricky here in the bleak north west
I've had R3 a few times (not this year though) but OIRT wasn't common
and i've never had band 2

34217. 90.4 "S" shaped drift pattern

Yahoo group: SkywavesDX (2014)
Date: 2014-08-30 12:46:53 UTC
From: Tim Bucknall
Topic: 34217 Message: 34217

Dear all,
like Dave i've started looking for unusual tx signatures that may help with identification

can anyone help with the above?
i ruled out Egem, Epping Green, Truskmore, Crosshaven and at least one radio 3 tx, prob nailsworth

condx were awful so the signal must be UK or very near continent, Vertical polarisation and audio type rule out Germany

can anyone have a look at the London Pirate on 90.4, the Eiffel Tower tx and/or their local radio 3 relays for an "s" shaped drift pattern?

if theres any txs up in t'grim north that you want measuring let me know and i'll return the favour

yes FM Carrier measurement - its not quite as much of a "thing" as mw carrier monitoring but i shall continue battering away until i've exhausted the dx potential!

i've been adding offset data to my bandscans for a while in the hope that it may help others to id stuff

Well Moldova made it here in the bleak Northwest England on 02/06/14 Radio Stil 87.6 with a PI:5057.

Here is a recording of it.

https://www.youtube.com/watch?v=JHdOM1t03gs

I don't believe anything else needs to be added to the bandscans
anyone with enough interest to look at the bandscans will know that a
700km station is likely to fade in and out and not provide local
reception!

I feel like we're going backwards, people seem to have forgotten how
to do a bandscan!

OK. How do you suggest we do a bandscan? What's would your own criteria be? I think we both have slightly differing ideas of what we would include in our bandscans.

Since other DXers have differing opinions too, there would probably be a need to break things down into sub-headings. The only problem with that would be that we would all have our own ideas of what is classed as "regular" and "semi-regular", etc.

Just trying to establish some kind of standardisation, if possible.

John

absolutely
no offence meant to anyone on my part either

I guess we've had a lot of membership churn since 2007 so i shouldn't
be so surprised that we need to clarify this again

I've banged on enough about my idea of a bandscan- have a look at my 3
congleton bandscans to get some idea of what i consider acceptable

basically everything that FMlist says shouldn't go in your log book
should go in your bandscan

you (JF) used to follow the same guidlines too before living on the
coast turned your head ;-)
I miss our old friendly bandscan competitions of old - though i know
you'd leave me for dust if you did a thorough bandscan from your new
place

I notice some bandscans in FMlist have clearly included E skip &
meteor and they're just confusing for newcomers- perhaps there should
be corporal punishment for such people?

A bandscan should show me info i can't get from the automatically
generated (predicted) bandscans for a particular location

This is what caught my eye the most in your message. I think it should
include the same and other stations which help to clarify things
regarding what you should */expect/* to hear. This, I think, is the key
distinction. The word /*expect*/.
If it's not the norm for a particular location then it probably

shouldn't be included in a general bandscan. Newcomers, rightly or wrongly (there are no strict rules about this), might include something they heard via meteor scatter in a bandscan, just because it happened to come in while they were at that location.

The bandscans we conducted at Middleton Top and Alport Heights, etc., were */cumulative/* bandscans and stations were added as they were received. These included scatter and tropo though. /*Cumulative*/ means that it keeps growing. What a bandscan should probably not include is additions due to propagation. It should include stations you would /*expect*/ to hear, be they solid regulars, almost regulars, occasionals or rarities.

I have a noose at the ready. Oh ... is that my name on it? ;O)

holiday bandscans etc will often include a bit of tropo to give an
idea of whats possible
or to give a snapshot of the band on the day you were there
if its somewhere you don't live 24/7 you don't know whats normal

but home bandscans shouldn't include pure tropo reception that isn't daily

no i definitely didn't include you in the guilty list :D
..but theres some people in north europe whos bandscans include algeria

34225. Bandscans in FMLIST

Yahoo group: SkywavesDX (2014)
Date: 2014-08-30 17:16:07 UTC
From: Günter Lorenz
Topic: 34225 Message: 34225
Attachments: 1 described; binary payloads are missing from this source WARC

Hi,

there is a variety of ways how bandscans are created. All of them are useful because somebody spent his time, and FMLIST benefits because we know that a station exists and where it has been heard. For example, we have many bandscans from people on vacation. They will just stop their car, hit a "scan" button on the radio, and take a list of stations, perhaps 40 or 50. Or they will use a portable radio and spend one evening or two. If you were living in the same location, with a descent antenna, tuner and could spend a lot of time, your bandscan may get 500 stations or more.
Some bandscans are real snapshots. DXers been there once, done quickly. Others are continuous work, built up over years.

All that could/should be visible from reading the bandscan header.

FMLIST is not putting up rules. Everyone may use the features as he likes. I know that there are some bandscans which include Sproadic E. These DXers may have their reasons, I have explained to them why they should not do it, but I can only make recommendations. Some people put their 100 kW 10 km local into their logbook!

My personal view, shared by many others, is that a bandscan should contain everything except Sporadic E, MS, F2 and other long-distance, ionospheric stuff. These items should go only into the logbook.
The bandscan should be built up from local and regular stations. It may also contain stations received via other atmospheric phenomens, including aircraft reflection, and all kind of tropo.

As only logbook entries are sent to the DX-Clusters and into alerting systems, I put my tropo results both in the bandscan and in the logbook. I avoid to put "regular" aircraft scatter into the logbook. But I log tropo-ducting, when it happens.

I have now implemented a "coding" or "categorization" tool. This allows you to create your individual system to categorize your bandscan entries. To create your scheme, go to the "MyFM configuration page". I've created two schemes for demonstration, you can create your own. The color codes can be picked from apage like this:
http://www.colorspire.com/rgb-color-wheel/ <http://www.colorspire.com/rgb-color-wheel/>
Use the 6 digits without the # sign.
Assigning the "category" is currently possible by editing the bandscan entry.

73,
Günter

34226. bandscans

Yahoo group: SkywavesDX (2014)

From: Tim Bucknall
Topic: 34226 Message: 34226

I see the suggested addition to fmlist has been made (drop down box)

so which option do i select for tropo scatter reception?
if "regular" then all my bandscan stations are regular so this seems redundant!

i was happy with the site before, this seems a pointless complication

Congrats, John
Can you explane what "cheryl Cole" does mean? (look at RDS 88'0 Megaparty)
For me this season has been the poorest concerning sporadic DX, just a dozen of catches!!!
73 & DX
Pedro

can you explain the difference between tropo inversion and tropo ducting?

i understand tropo (goes in logbook) and tropo scatter (goes in bandscan)

how do i tell whats tropo ducting and whats tropo inversion

is ducting only at coastal locations?

if so i understand

What the man says!

There probably shouldn't be any hard rules for our hobby. After all, it is a /hobby/, but helpful /guidelines/ are of great use to beginners. It's back to the creme egg analogy - "How do you eat yours?" We all do things in our own way, pure and simple. Nobody is right or wrong, well, sort of. ;O)

I agree 99% with you G?nter. The aircraft scatter is a semi-permanent mode for some signals, but can also be worthy of inclusion in the logbook, in my humble opinion. The perfect example here would be Lille. It never really drops out because of the amount of air traffic in the skies at the appropriate reflection point, but if such a mode is included in a bandscan it is better if that aspect is clarified. The coding system is perfect for this. Thank you for adding it.

But I would never /*log*/ Lille, unless there was something exceptional about it, i.e. it was seriously enhanced and I considered that fact was worthy of reporting/logging. It's also interesting that people have said I /*should*/ report my daily scatter as it gives those people an idea of what receptions is like, but this links nicely back to the point about it being included in a /*bandscan*/ and not in a /*logbook*/.

John

From: nick gilly
Topic: 34225 Message: 34231

I think ducting, or at least, elevated ducting can happen inland as well Tim. A very good example is my reception of Untersberg on 87.8 during September last year. The tx site is on top of a mountain in the Alps and got 'carried' to central southern England by such an elevated duct. Nearer txes on the same channel didn't make it because they are lower down and so below the ducting zone. For the same reason Salzburg/Gaisberg (just a few kms away from Untersberg) didn't make it in either as this site is lower. It probably explains cases of strong signals from a specific site or area whereas closer parts aren't received, almost like a skip zone.

I hope this helps.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

can you explain the difference between tropo inversion and tropo ducting?

i understand tropo (goes in logbook) and tropo scatter (goes in bandscan)

how do i tell whats tropo ducting and whats tropo inversion

is ducting only at coastal locations?

if so i understand

Hello Pedro.

I agree. Definitely the worst Es season in my memory.

Cheryl Cole is a grossly overpaid singer who 'performs' with the group Girls Aloud. If you are unaware of her solo work it's probably best to keep it that way ;O)

When I received the signal from Megaparty the only RDS which came up was _Cheryl_ _Cole___. I had no idea who this was until the PI code appeared. I found it amusing that the PS name was _Cheryl_ _Cole___ and so I included it in with my log to indicate that Megaparty use scrolling RDS. Eventually the PS "Megaparty" appeared and so I added this to the log.

Further reading:

https://www.youtube.com/watch?v=Qr31Vhu01fc

Sorry I am unable to provide sick buckets. ;O)

John

your lille point raises another issue - if i didn't include it in the
bandscan it would clog up my log book and make my logs even more
boring than they already are

IMO get your daily scatter reception in the bandscan then you can
forget it and start looking for real dx

can someone just confirm that the new "ducting" option refers to the
coastal stuff that dies as soon as you go inland?

if so i doubt i'll be using that option anytime soon :(

not sure if i've ever experienced true ducting on Band II apart from
me, JF & PTs possible 87.75 in cornwall in 2000

that is to say i don't think i've id'ed anything on Band 2 via ducting

I've had ducting at UHF in the days of analogue. on Llandudno seafront
i could watch Caldbeck, Chatton etc on a handheld tv and reception
faded if i moved a few hundred feet inland

i might have had some ducting on FM at a beach called porthcolman
a load of Lancashire stuff was coming in at sea level, 107.4 tower fm etc
but i have no idea if it was true ducting

Thanks Nick, i think i get it now

i can think of one example where condx seemed flat except for Le Mans
(and nothing closer)

> if so i understand

I think I cannot fully explain that difference. Perhaps I can explain some theory, but I would have some problems attributing these modes to many reception situations. This would be my starting point: http://www.dxinfocentre.com/propagation/tr-modes.htm
I do not agree with the terminology used there: "Aircraft Scatter (AS)..(a.k.a. Tropospheric Reflection) ": First, it is not scatter, as the aircraft reflects the signal, it does not scatter it. Second, the reflection has nothing to do with troposphere - it would happen with any object similar to an aircraft, independent of its altitude. The point is: The reflection has no natural cause.

OTOH, I doubt I could distinguish tropo scatter from aircraft reflection, with so many aircrafts in the sky. We would need some more volcanic help to find out that tropo scatter is rather rare.

73,
Günter

> i was happy with the site before, this seems a pointless complication

Don't stick to the default scheme. You can use any kind of clustering, for example, you can categorize stable and unstable transmitters, or favorite and unfavorite stations. Just click on "Create new..." and define your own scheme.
But all this is just an option. If you don't need it, just ignore it.
I will provide an option so it can be switched on / off.

73,
Günter

34238. Spanish tropo in Devon

Yahoo group: SkywavesDX (2014)
Date: 2014-08-31 07:04:30 UTC
From: Ian Kelly
Topic: 34238 Message: 34238

92.8 RNE5 is in, near Kingsbridge near the south coast of Devon.

Here on a holiday for a few days and I've sneaked in my Sony XDR and 3 ele beam!

Ian Kelly

Nice work Ian ;-) The charts are suggesting tropo between SW England and Galicia on & off for the next few days.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Hi Nick. Not a huge amount from Spain, but now conditions picking up to Ireland. Mullaghanish off the side of the horizontal beam, so will have to swap planes!

I'm a little out of touch. Getting "The Hub" from Cornwall on both 106.1 and 106.4, a little tropo enhanced. Anyone know the sites and power for these? Nothing on FMLIST.

34245. Re: AW: [SkywavesDX] bandscans

Yahoo group: SkywavesDX (2014)
Date: 2014-08-31 09:25:31 UTC
From: John Faulkner, Skegness
Topic: 34226 Message: 34245

I made another attempt to compile a comprehensive bandscan this morning, only to give up once again as it's just too complicated to work out. There is so much happening on FM here, it will take me a long time to decide to pigeonhole each station. There's also the question of "Do I still keep old stations and transmitters which have since closed or moved?". Well, I think they would be useful, if perhaps greyed out to indicate that they were once around and often heard.

I have got into the habit of including aircraft scatter and troposcatter (collectively called General Scatter in my own case), that I have had to ask myself the question of whether this should be included in a bandscan. It is clear that we all see the various modes of propagation in a different way. Aircraft scatter is the obvious man-made mode, but it is such a part of our daily life that I would argue it is constant.

I will still attempt to conduct a full and meaningful bandscan, but it will take some time. Once I have done this, I doubt I will be keen to re-type it for FM List as that would also take a considerable amount of time. The problem there is that I have created my own lists for my website. Typing everything out twice is going to be a ball ache. IDEALLY (and please take note of this) it would be much better to start your bandscans on FM List and then you can export them for your own use in a variety of ways. FM List is the way forward. Maybe G?nter would be able to import some of our lists and logs, but we would probably asking way too much.

So, just to throw in a few more thoughts and spanners. I know this topic won't be of interest to everybody but it's a part of the hobby and it's good to discuss like this. (How I wished we had a bulletin board type forum - hint, hint moderators)

Cheers

John

Thanks Gunter,
you make an excellent point about Aircraft reflection
i well remember 2010 when the band was horribly dead and we suddenly
realised how big a contribution aircraft reflection made

Gunter,
just to clarify- my recent quibbles about the new additions to fm list
in no way change my opinion that its the greatest tool for fm dxing
EVER!
I could not exist without it!

some people are foolish enough to attempt to compile bandscans
outside of FM list- but i would never do such a thing ;-)

since people are telling you to add functions to fm list, can i
re-pitch my old idea for speeding up bandscans?

ie: an option to add in bulk every station from a particular tx?

just imagine if you're on holiday on the Birmingham riviera compiling
a bandscan from this exotic sunkissed location!

if you could add every station from sutton coldfield to your bandscan
by ticking a box when you add the 1st one - you would save valuable
seconds which could be spent sipping cocktails on the veranda!

Echo this ☐ though with Sutton Coldfield I can hear the powerhouses but not the low power locals, so the ability to deselect those would be good. So..
click one, window comes up with all stations with a tickbox next to each one for us to deselect the flea powered ones.

On the subject of bandscans ☐ for me, if I can hear a station on more than about 50% of the days, it goes in.

==========

Jim, Bournemouth, Dorset. IO90BR.

Elad FDM-S2, Perseus/FM+ and Funcube Dongle SDR Recievers

8-element OP-DES for Band 2, 12-ele ZL Special for 2m, plus wideband vertical.

Thanks for that info Nick.

The tropo is persisting here, despite the sun burning off the dawn mist quickly. Both Spain and Ireland doing well, as we approach local noon.

I'm keeping tally on FMLIST, if anyone wants to follow. Are thse conditions getting further inland?

Ian Kelly
South Devon

Looks like you have a nice hilltop location there Ian. Some nice loggings.

Can't wait to see what else comes in.

Good DX!

John

As above some excellent logs there Ian. I look forward to seeing what else comes in.

Maybe Portugal would be a possibility with these conditions. Fingers crossed.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

G'day Balazs

I also received that Yahoo Groups error also when attempting to searching the forum over the weekend. Google still works, however.

site:https://uk.groups.yahoo.com/neo/groups/SkywavesDX query

Let's say for example, you want to search SkywavesDX posts on the topic of aircraft scatter. Simply type the following into the Google search field:

site:https://uk.groups.yahoo.com/neo/groups/SkywavesDX "aircraft scatter"

Hint: To search really old messages (e.g. from 2011) the following query works:

site:https://uk.groups.yahoo.com/group/SkywavesDX "aircraft scatter"

Good DX!
Leigh

Last days (weeks ?) "Search Conversations" function does not work in the group.

It says: Whoops ! Polls feature not enabled

What could be the reason?

Balazs

Been out for the afternoon, but on returning, Spain has now strengthened to RDS level, three bars on the XDR (106.4 RPA FM, Gamoniteiro). Very steady signals.

My location is about 2 miles inland but we have a distant sea view from upstairs in the cottage. Loads of blue sky, warm and breezy.

i don't think this is my normal reception - the reason for my
uncertainty is that 107.5 is a real headache channel even with narrow
filters
i don't spend much time there

its in a special circle of hell with 96.3, 99.0, 102.5, 106.8, 107.0

As darkness falls over Devon, conditions have taken a massive dive. Spain has disappeared after being in for most of the day, and France tailing off in levels too.

Subject: Re: [SkywavesDX] 102.1 HAFREN__ V Pol only

almost certainly Llandinam in that case :-)

who else is getting it?
surely our Shropshire contingent? Wigan?, stockport?

when i heard birdsong on fm i thought i'd somehow travelled back to 1992!

driving home from the roaches yesterday it was coming in well on the
Eastern side (wrong side) of the peaks, but on the West side
Manchester 102.0 completely splattered it out of existence

at the roaches i ignored this suspiciously strong signal on 102.1 for
ages assuming it was a mixing product of 102.6 + 103.1 (wrekin is
visible to the naked eye from there)

There's a weather front that has gone through Devon so that's probably why conditions have deteriorated.

Maybe as the front moves east the ducting to Spain will also move east across southern England.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

From: Ian Kelly
Topic: 34238 Message: 34269

Must have been a very weak front, no rain on it here and only closed over slightly. A couple of Spanish stations on different frequencies to earlier appeared late this evening, but didn't ID them, but conditions still subdued compared to this afternoon, when some of the Spaniards came up with 3 bars and RDS on the XDR.

can't remember the last time i had a london pirate on tropo!

very weak but luckily mod is low so i can use the 14k filter
freq is slightly LF of nominal

Absolutely no tropo getting through to the east coast this evening apart from BBC Radio Devon which picked up slightly around 19:00 - not strong enough for RDS.

unstable carrier on 90.407 peaking up towards london, maybe woah fm, faded now

btw fm list won't let me log stuff- says my logs are in the future!

This also happens to me when I want to make loggings between midnight
and 1am local time. I can usually get around it by changing to the
previous day's date and then editing back to the correct one afterwards.
I don't know why it happens.

Hi Tim. Raw Radio isn't quite a London pirate. It's somewhere west of London, maybe East Berkshire or South Bucks, from my observations.

The Spanish tropo continues this mornong, despite being grey and a little drizzly. Lots to be had from the Asturias area. Rock FM from Ovideo/Llanera on 97.9 is in with RDS on the XDR, despite listed power of just 0.5kW.

34276. RE: [SkywavesDX] UK Raw Radio 87.5 //www

Yahoo group: SkywavesDX (2014)
Date: 2014-09-01 10:43:51 UTC
From: Martin Payne
Topic: 34270 Message: 34276

Hi Tim,

This one seems to get out really well. Not only does it cover London, but I've heard it reaches Hampshire and the Sussex coast too. I've found the signal strength in South London to be fairly average, and it tends to get wiped out by Sala Al Hawa—an Arabic station which is also on 87.5.

Regarding your 90.4 catch, I can't really help you on that one other than to say that Whoa is currently active.

Regards,

Martin

Subject: [SkywavesDX] UK Raw Radio 87.5 //www

can't remember the last time i had a london pirate on tropo!

very weak but luckily mod is low so i can use the 14k filter
freq is slightly LF of nominal

Thanks Ian & Martin for your pirate info

seems the 87.7 carrier heard sunday morning was Soundz in oxfordshire
who don't start programming till midday

so is the "party" over?
its drizzling but pressure is still high

34278. A bit of tropo this morning

Yahoo group: SkywavesDX (2014)
Date: 2014-09-01 10:57:33 UTC
From: John Faulkner, Skegness
Topic: 34278 Message: 34278

The path to Spain tried to open this morning with a tentative RNE5 on 105.0 but it turned out to be France Bleu Touraine - this one is a regular at Suffolk. Toulouse struggled in on 87.9 for a time but most of the activity has been towards Holland and Belgium. Conditions have tapered off a little now - midday.

Good DX!

John

The party's not over at all, horrible drizzle in South Devon all morning,
yet plenty of Spain.

Out for the day, so will miss the fun till this evening.

I'm too busy to dx
- i know i swear i never thought i'd say that sentence!
but i'm helping organise a conference in Warsaw - only 2 weeks left
and our manager is incapacitated aaagh!

got the radio on 87.7 in the background though, something was in this
morning with very low mod, faded now

From: Tim Bucknall
Topic: 34285 Message: 34285

check out what they're using!
Baofeng UV-5R - with the DSP 65-108mhz FMBC rx built in!
pic.twitter.com/wwLlRaKqcN

i own one myself and find it much more robust than the tecsun
portables- which i'm always breaking
they also make excellent UHF/VHF "scanners"

I was initially skeptical about its FM performance, but that was
probably my crappy urban location- when i took one to Cyprus last sept
it performed brilliantly

34291. Re: [SkywavesDX] A bit of tropo this morning

Yahoo group: SkywavesDX (2014)
Date: 2014-09-01 19:27:46 UTC
From: Ian Kelly
Topic: 34278 Message: 34291

I'm afraid
to report that the party is over here in Devon, after returning from our trip out today. It seems the rain finally washed out the path to Spain. The powerhouse signals from Brest are now much more subdued.

Last day here tomorrow, the Hepburn map suggests improving conditions again for dawn tomorrow.

personal 1st!

it should be easy to spot being this far off freq but just in case it
also has a minor but noticeable "wobble"

34300. Re: : Re: : Re: [SkywavesDX] Spanish tropo in Devon

Yahoo group: SkywavesDX (2014)
Date: 2014-09-02 07:18:37 UTC
From: Ian Kelly
Topic: 34238 Message: 34300

Probably my last update from Devon. Tropo conditions again very subdued compared to the last few days, but certainly not flat. Spain has been in very weak on 95.4 and 100.9. This is despite the Brest stations, which have been powerhouses, being very much weaker today. Perhaps a prospect of hearing some more distant stations that might have otherwise been buried by French stations? However, as I type, the two Spaniards mentioned have wandered away.

Ian Kelly

34301. Streaming Live Tropo

Yahoo group: SkywavesDX (2014)
Date: 2014-09-02 08:36:30 UTC
From: John Faulkner, Skegness
Topic: 13306 Message: 34301

Some nice signals now appearing from the continent and other directions too, actually becoming stronger as the morning progresses!

I am streaming this via TeamViewer. User ID: 284684388, password: 9k51ek.

Good DX!

John

34303. Interesting non-response from Spark FM, Monkswearmouth

Yahoo group: SkywavesDX (2014)
Date: 2014-09-02 11:08:33 UTC
From: John Faulkner, Skegness
Topic: 34303 Message: 34303

107.0 Spark FM, access radio for Monkswearmouth, Sunderland, has been coming in here for the first time this morning. I contacted them via their Facebook page (it seems to be open for public comments and requests) and posted a video showing my reception.

Within 15 minutes my post was removed. I thought it might just be ignored at worst. Maybe they are worried that their signal might be seen as too powerful and worry about OFTWIT intervention. Interesting though.

This reminds me of a phone call I once made to Guildford Campus Radio some years ago, informing them that I was picking them up loud and clear in Nottinghamshire. The presenters commented on air about my call, saying something like "Here, this geezer's just phone us from Nottinghamshire and reckons he can pick us up there. No way." and there were comments of total disbelief and "it's a wind-up" from co-presenters who were also in the studio.

Anyway. I probably wasted an hour or more farting around with Facebook, YouTube, Vimeo, AnyVideoConverter and a variety of media players. What a waste of time.

The tropo has just about gone now. My web stream is off.

Good DX!

John

OK, it seems my post to Spark FM's Facebook page has been moved to another section.

Here is the video, which I meant to post last time:
https://www.youtube.com/watch?v=QwgZJ-hRlrU

Hopefully more tropo later!

John

442.275 a loop of Huw Edwards:
"this is bbc television, broadcasting house london identifying the
clean feed circuit...
this is the return sound circuit from bbc television news, london
telephone your countries international access code followed by 4420 3614 5000"

direction is NW so definitely not from London

that high pitched jingle really cuts through the noise when no other
audio is apparent
i checked the web feed and thats what i heard on 105.6

on the subject of 105.6 the 2 capital txs in yorkshire helpfully have
unique offsets

i don't know which is which yet - prob won't be able to nail it until
the tropo goes down and sheffield fades but one is 105.600 the other
is 105.602

34310. rtl dongle problem

Yahoo group: SkywavesDX (2014)
Date: 2014-09-02 15:16:14 UTC
From: Privat Patrice
Topic: 34310 Message: 34310

Hi

I'm quite new to SDR and it is still very mysterious to me.

I have a brand new RTL dongle (DVB-T+DAB+FM) but can't make it work with

SDR Console 2.2 .

That is when I try to "create a new radio" the scroll proposes "RTL Dongle TCP" (radio definition/me) but

not "RTL Dongle usb" (my type of connection) and I guess this is why no signal appears on the screen (totally mute).

Can someone help me?

Here's my configuration :

https://www.flickr.com/photos/100264456@N02/

many thanks Pat

BTW are SDR Console v2.2 and that precise dongle compatible with RDS Spy ?

34311. RE: [SkywavesDX] rtl dongle problem

You need to install the Zadig driver first.

IMHO It’s best to get SDR Sharp running first and then sdr console.

Regards

Stuart

Pat,

DON’T install the original software that came with the dongle (but I suppose you didn’t ?).

Insert the RTL-SDR stick

Install Zadig.exe (<http://sourceforge.net/projects/libwdi/files/zadig/>
http://sourceforge.net/projects/libwdi/files/zadig/)

Then choose OPTIONS and select LIST ALL DEVICES

Select RTL2832U or when it’s not there BULK-IN INTERFACE (Interface0)

Select driver WINUSB

Click REINSTALL DRIVER or REPLACE DRIVER

Close Zadig

Restart Windows

Start SDR-RADIO.COM

Definitions, Search, RTL SDR (USB)

OK

That’s how I did it a few monts ago as I remember J

Aye, I've been told that many times, but I can't install it on my laptop under Win8;

It just does not install itself,vanishes after a few minutes, I never figured out why...

Band 2 Meteor Scatter:
93.5 0816 CZE Frekvence 1, ?st? nad Labem/Bukov? hora (US) Pops, as
web 991km **
*
**Band 2 General Scatter:*
105.2 0836 D Radio RST, Sch?ppingen (nrw) OM (ads?) then pops, as web.
Own programme 482km

** Personal Skegness 'First'

Two other stations which I believe came through but which were too brief
to nail down were France Inter, probably from the Angers site, and the
BRF 2 from 5kW Herbesthal. Scatter from Teutoburger Wald and Liege was
also persistent.

That is correct. That happened to me too. It is normal.

The purpose of Zadig is to load the drivers. Windows cannot do this itself.

Hi John, but if Zadig refuses to open, there's no way i can reach
OPTIONS and select LIST ALL DEVICES

or am I wrong ?

Pat,

DON’T install the original software that came with the dongle (but I suppose you didn’t ?).

Insert the RTL-SDR stick

Install Zadig.exe (http://sourceforge.net/projects/libwdi/files/zadig/)

Then choose OPTIONS and select LIST ALL DEVICES

Select RTL2832U or when it’s not there BULK-IN INTERFACE (Interface0)

Select driver WINUSB

Click REINSTALL DRIVER or REPLACE DRIVER

Close Zadig

Restart Windows

Start SDR-RADIO.COM

Definitions, Search, RTL SDR (USB)

OK

That’s how I did it a few monts ago as I remember J

Pat,

DON’T install the original software that came with the dongle (but I suppose you didn’t ?).

Insert the RTL-SDR stick

Install Zadig.exe (http://sourceforge.net/projects/libwdi/files/zadig/)

Then choose OPTIONS and select LIST ALL DEVICES

Select RTL2832U or when it’s not there BULK-IN INTERFACE (Interface0)

Select driver WINUSB

Click REINSTALL DRIVER or REPLACE DRIVER

Close Zadig

Restart Windows

Start SDR-RADIO.COM

Definitions, Search, RTL SDR (USB)

OK

That’s how I did it a few monts ago as I remember J

Pat,

DON’T install the original software that came with the dongle (but I suppose you didn’t ?).

Insert the RTL-SDR stick

Install Zadig.exe (<http://sourceforge.net/projects/libwdi/files/zadig/>
http://sourceforge.net/projects/libwdi/files/zadig/)

Then choose OPTIONS and select LIST ALL DEVICES

Select RTL2832U or when it’s not there BULK-IN INTERFACE (Interface0)

Select driver WINUSB

Click REINSTALL DRIVER or REPLACE DRIVER

Close Zadig

Restart Windows

Start SDR-RADIO.COM

Definitions, Search, RTL SDR (USB)

OK

That’s how I did it a few monts ago as I remember J

34326. RE: [SkywavesDX] rtl dongle problem

Yahoo group: SkywavesDX (2014)
Date: 2014-09-02 17:55:20 UTC
From: Satnipper
Topic: 34310 Message: 34326

Run Zadig again, don’t reboot and install SDR#.

Run SDR# and see if you can see rtl sdr (usb).

If you can choose that option and see whether it works.

If you don’t see usb option in sdr# then there is a problem with the driver installation.

This is the crucial url: http://www.aa5sh.com/?page_id=65

I remember now how much more convoluted it is to getting the dongles to work in sdr console.

Run Zadig again, don’t reboot and install SDR#.

Run SDR# and see if you can see rtl sdr (usb).

If you can choose that option and see whether it works.

If you don’t see usb option in sdr# then there is a problem with the driver installation.

Run Zadig again, don’t reboot and install SDR#.

Run SDR# and see if you can see rtl sdr (usb).

If you can choose that option and see whether it works.

If you don’t see usb option in sdr# then there is a problem with the driver installation.

Pat,

DON’T install the original software that came with the dongle (but I suppose you didn’t ?).

Insert the RTL-SDR stick

Install Zadig.exe (<http://sourceforge.net/projects/libwdi/files/zadig/>
http://sourceforge.net/projects/libwdi/files/zadig/)

Then choose OPTIONS and select LIST ALL DEVICES

Select RTL2832U or when it’s not there BULK-IN INTERFACE (Interface0)

Select driver WINUSB

Click REINSTALL DRIVER or REPLACE DRIVER

Close Zadig

Restart Windows

Start SDR-RADIO.COM

Definitions, Search, RTL SDR (USB)

OK

That’s how I did it a few monts ago as I remember J

Hi

I've tried again the counsel regarding the TCP-exe file (under dos). i discovered that if i let that MS DOS screen open and running (C/program files / SDR-RADIO-pro.com/ RTL_TCP.EXE)

THEN after creating a new radio in radio configuration, the scroll gets alive, i can see the ATC voice on 128.42 AM,

they are simultaneous with the pilots' voices on my real scanner nearby, but i don't hear them thru the dongle only white noise, probably the smallish antenna they put on the parcel is too weak and not enough ?

Please have a look at my screengrab !

pat

34333. now with (good) sound !!!

Yahoo group: SkywavesDX (2014)

From: Privat Patrice
Topic: 34333 Message: 34333

it was a tuning problem, i got that AIRFRANCE 841E booming with London 128.425 !!

I'm on my way thanks to you all guys; I will test the FM band now; weird to be obliged to keep that ms dos screen open though !

thanks a million

pat

34334. Re: [SkywavesDX] rtl dongle problem

SDR# Does not need to be installed. Download the .zip for here - http://sdrsharp.com/downloads/sdr-install.zip Then extract it and run the .bat file, I recommend running as admin. This downloads a folder full of the parts needed to run SDR#. These do NOT need to be installed. When it's complete the console window will close and you can run the .exe file from the new folder. If you don't extract the files from the .zip it will not download, or may download but the files end up in a temp directory.

To make things really easy, I have downloaded the files you need in their entirety and have rezipped them and placed them in a dropbox folder just for you. This eliminates the convoluted problems of using .bat files and unusual methods to obtain the application. Just download from this link https://dl.dropboxusercontent.com/u/13429966/sdrsharp.zip and then unzip them to a folder on your desktop (if you have one?) or at least somewhere you can find it. Once done, click the file named SDRSharp.exe And it will run.

Having said this I suspect you may have a virus or some unwelcome software on your PC, it does appear to be behaving weird. If you would like me to assist in identifying the cause of you issues, let me know tonight and I can set up something, perhaps remote view your PC and fix it with you. Let me know sooner rather than later because I have a lot to do tonight.

I sent my last message to you before I realised you had sent this. Glad you have got it working. Yes the antenna's they provide are too small, but take a word of advice, don't get one too big either. These RTL dongles can be overloaded easily due to the wide bandwidth and lack of front end filters.

That's very kind of you and really neat ! Well if fact the 'SDR install folder' remains but empty as a shell after a few minutes. I don't suspect a virus really

as I'm protected by AVG and Norton (also i frequently run RogueKiller and ADW cleaner).

I will do as you advise tomorrow morning (I've had a hectic day) and keep you aware of the results.

I surely appreciate your concern and help.

Cheers from Beauvais

Run Zadig again, don’t reboot and install SDR#.

Run SDR# and see if you can see rtl sdr (usb).

If you can choose that option and see whether it works.

If you don’t see usb option in sdr# then there is a problem with the driver installation.

Pat,

DON’T install the original software that came with the dongle (but I suppose you didn’t ?).

Insert the RTL-SDR stick

Install Zadig.exe (http://sourceforge.net/projects/libwdi/files/zadig/)

Then choose OPTIONS and select LIST ALL DEVICES

Select RTL2832U or when it’s not there BULK-IN INTERFACE (Interface0)

Select driver WINUSB

Click REINSTALL DRIVER or REPLACE DRIVER

Close Zadig

Restart Windows

Start SDR-RADIO.COM

Definitions, Search, RTL SDR (USB)

OK

That’s how I did it a few monts ago as I remember J

34337. Re: [SkywavesDX] SOME progress at last !

Yahoo group: SkywavesDX (2014)
Date: 2014-09-02 20:26:29 UTC
From: Privat Patrice
Topic: 34332 Message: 34337

even if i got some results tonight thanks to this forum's dedicated members, i will try SDR sharp as people from all corners tell me it is
more "ignoramus compatible" and i'm a real nutcase in front of bat files, dll, you name it !!

from what i could gather, i only got the most powerful stations from my own city with the RTL dongle and they spread their wings 1 or 2 mhz both sides (guess i'll have to fumble with gain and soforth).

Also there's a RDS function too that detected 4 stations (the loudest ones) but i'd like to learn if RDS SPY can work in combination with SDR Console V2.2 and this 2832 dongle..

Many thanks again, i will try to hook a decent aerial to that dongle; the aim would be to set up a tropo watch in the fall while i'm busy at the salt mine , maybe by parking on a high channel like 104.5 and see in the evening if a distant PI code has popped up during the day.

I'm an amateur FMDXer with 235 stations to my name (Turkey 10 days ago during the last heroic skip) but the E season is so short, I'd like to have some trop fun, last year I had my first 2 tropo hits ever , I was terribly excited by that, cheers now

I sent my last message to you before I realised you had sent this. Glad you have got it working. Yes the antenna's they provide are too small, but take a word of advice, don't get one too big either. These RTL dongles can be overloaded easily due to the wide bandwidth and lack of front end filters.

34338. RE: [SkywavesDX] rtl dongle problem

Yahoo group: SkywavesDX (2014)
Date: 2014-09-02 20:27:13 UTC
From: Satnipper
Topic: 34310 Message: 34338

You’re probably extracting it to some default directory or another.

Do a PC wide search for SDRSharrp.exe.

From: SkywavesDX@yahoogroups.co.uk [mailto:SkywavesDX@...]
Sent: 02 September 2014 21:11
To: SkywavesDX@...
Subject: Re: [SkywavesDX] rtl dongle problem

That's very kind of you and really neat ! Well if fact the 'SDR install folder' remains but empty as a shell after a few minutes. I don't suspect a virus really

as I'm protected by AVG and Norton (also i frequently run RogueKiller and ADW cleaner).

I will do as you advise tomorrow morning (I've had a hectic day) and keep you aware of the results.

I surely appreciate your concern and help.

Cheers from Beauvais

SDR# Does not need to be installed. Download the .zip for here - http://sdrsharp.com/downloads/sdr-install.zipThen extract it and run the .bat file, I recommend running as admin. This downloads a folder full of the parts needed to run SDR#. These do NOT need to be installed. When it's complete the console window will close and you can run the .exe file from the new folder. If you don't extract the files from the .zip it will not download, or may download but the files end up in a temp directory.

>

To make things really easy, I have downloaded the files you need in their entirety and have rezipped them and placed them in a dropbox folder just for you. This eliminates the convoluted problems of using .bat files and unusual methods to obtain the application. Just download from this link https://dl.dropboxusercontent.com/u/13429966/sdrsharp.zip and then unzip them to a folder on your desktop (if you have one?) or at least somewhere you can find it. Once done, click the file named SDRSharp.exe And it will run.

>

Having said this I suspect you may have a virus or some unwelcome software on your PC, it does appear to be behaving weird. If you would like me to assist in identifying the cause of you issues, let me know tonight and I can set up something, perhaps remote view your PC and fix it with you. Let me know sooner rather than later because I have a lot to do tonight.

34339. Tropo starting

Yahoo group: SkywavesDX (2014)
Date: 2014-09-02 20:27:44 UTC
From: nick gilly
Topic: 1281 Message: 34339

It is starting to lift up now with the main Lille stations becoming more stable and reaching RDS levels. Vivacite was weak but stable on 101.8 from Tournai earlier on.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

34340. Re: [SkywavesDX] rtl dongle problem

Yahoo group: SkywavesDX (2014)

Just wanted to Thank Dennis, SatNipper & JF for their helpful posts on
installing the dongle
as an sdr rx

after reading these i can *almost face trying again to install it :-)

should have a new laptop next month for work etc so this laptop can be
purely dedicated to radio applications and i can strip out anything
that may clash with them

Very interesting, how are they on air band ? Do they cover OIRT / WFM ?

During yesterday's tropo to Ireland I also noticed Divis was not there.
Mount Leinster and Three Rock were at good levels, yet not even a hint
of Divis. It must have been off air or at least on reduced power.

John

What a bizarre slogan on City Talk, Liverpool's TALK station "_*Now... City Talk's Greatest Hits, the Biggest Songs on the Planet*_". It's a TALK station!

I have been careful to include as little music as possible in these videos so YT don't block them. They would have gone on Vimeo only they only allow a maximum of 10 uploads per day.

Great smashing super DX!

34346. South Devon FM tropo log - Tuesday 02/09/2014

Yahoo group: SkywavesDX (2014)
Date: 2014-09-03 12:39:32 UTC
From: Ian Kelly
Topic: 34346 Message: 34346

Just a few extra logs from yesterday, my final day on holiday in Devon.
Now back at work :-(

Conditions were far more subdued yesterday morning.

Going vertical seemed far more productive than horizontal during my trip.

Log
Ian Kelly, G-TQ7 St Ann's Chapel, Kingsbridge, Devon

34347. Re: [SkywavesDX] is divis 94.5 off?

Yahoo group: SkywavesDX (2014)
Date: 2014-09-03 12:44:10 UTC
From: Tim Bucknall
Topic: 34342 Message: 34347

Thanks John, good to know
I was very disoriented at first but what a stroke of luck during a tropo!

situation without Divis:
94.5 had Llandinam & Peterborough very close to each other and close
to nominal,(didn't bother figuring out which was which- will be able
to do that during flat condx)
Chatton was on 94.504 causing an audible het
there was also a BBC Radio Cymru relay with a really messy carrier-
like a childs scribble which actually reached audio levels at one
point

no way to tell if this was Llandyfriog or Dolgellau- both were on my
"hit list" so i'm still pleased. looking at my notes from my last
holiday in Wales Dolgellau didn't appear to have a fault but this was
over a year ago so who knows?

an unstable low power R4 actually briefly toppled the stable Llandonna
blowtorch on 103.6!
i've logged it as "Dolgellau?" aerial was pointing south at Croesrw
but nothing was heard on 93.4
again who knows!

aerial direction turned out to be almost irrelevant last night, the
direction providing best signal had more to do with where the unwanted
signal nulled than where the wanted signal was
Kilvey Hill 93.9 (another trace that looks like a scribble) was best beaming NW

had R4 104.4 that was either Conway or Llandyfriog & 103.5 which was
either Varteg Hill or Ffestiniog

I'm going to go hilltopping at at a good spot for the S/W while things are up

good dx

SDR# Does not need to be installed. Download the .zip for here - http://sdrsharp.com/downloads/sdr-install.zipThen extract it and run the .bat file, I recommend running as admin. This downloads a folder full of the parts needed to run SDR#. These do NOT need to be installed. When it's complete the console window will close and you can run the .exe file from the new folder. If you don't extract the files from the .zip it will not download, or may download but the files end up in a temp directory.

>

To make things really easy, I have downloaded the files you need in their entirety and have rezipped them and placed them in a dropbox folder just for you. This eliminates the convoluted problems of using .bat files and unusual methods to obtain the application. Just download from this link https://dl.dropboxusercontent.com/u/13429966/sdrsharp.zip and then unzip them to a folder on your desktop (if you have one?) or at least somewhere you can find it. Once done, click the file named SDRSharp.exe And it will run.

>

Having said this I suspect you may have a virus or some unwelcome software on your PC, it does appear to be behaving weird. If you would like me to assist in identifying the cause of you issues, let me know tonight and I can set up something, perhaps remote view your PC and fix it with you. Let me know sooner rather than later because I have a lot to do tonight.

Run Zadig again, don’t reboot and install SDR#.

Run SDR# and see if you can see rtl sdr (usb).

If you can choose that option and see whether it works.

If you don’t see usb option in sdr# then there is a problem with the driver installation.

Pat,

DON’T install the original software that came with the dongle (but I suppose you didn’t ?).

Insert the RTL-SDR stick

Install Zadig.exe (http://sourceforge.net/projects/libwdi/files/zadig/)

Then choose OPTIONS and select LIST ALL DEVICES

Select RTL2832U or when it’s not there BULK-IN INTERFACE (Interface0)

Select driver WINUSB

Click REINSTALL DRIVER or REPLACE DRIVER

Close Zadig

Restart Windows

Start SDR-RADIO.COM

Definitions, Search, RTL SDR (USB)

OK

That’s how I did it a few monts ago as I remember J

34349. Tropo trying to establish again

Yahoo group: SkywavesDX (2014)
Date: 2014-09-03 17:21:05 UTC
From: John Faulkner, Skegness
Topic: 34349 Message: 34349

After this morning's tropo let down I am at last seeing an enhancement to the near continent. Egem is peaking at 41dB and some other regular Holland/Belgian sites are lifting up to RDS level. It's just the regulars so far but hopefully it will build into something mind-bogglingly fantastic for us all.

Good DX!

John

Hello folks,
Just a quick note from Bruff ,Ireland. I'm inland, 20 km south of Limerick. The BBC North Hessary Tor and Wenvoe XMTR's have been full quieting, RDS, and stereo on a stock car radio during this current tropo opening.

I receive the North Hessary Tor transmitters 24/7 at the home QTH, thanks to a mountain ridge and refraction about 40 km from here, between the site and my home. Signals are usually strong, but there are occasional fades close to the noise level, but these past two days have provided outstanding reception.

You may know more about this than I do, but there is a dance music pirate now on in Cork. It was on 87.8 up to a week ago, but has now landed on 87.5. Of course I am north of Cork, but the low powered RTE 1 stations are very strong on 87.8 during tropo. and may have affected them in Cork as well.

I enjoy the group. Thanks!

no air band sadly (gap between 108 & 136- and no am mode)

they cover 65-108 with performance equivalent to the tecsun dsp
portables but with only 100khz tuning

i've not had OIRT e skip on it yet so i can't say whether its usable
with 100khz tuning instead of the 10khz option on the tecsun

full report on how useable it is after my visit to Lwow in october-
the local tx is 67.04 so i'll see if the dsp circuit allows me to
listen on 67.0 without distortion

There's not much happening here tonight this morning Pirate FM 102.2 was booming in and this afternoon I received Truskmore that's a first for me as it has to negotiate a big lump of rock to my N/W half a mile away.

North Hessay Tor has been booming in here for the past few days oh and an invasion of Hearts all riveting stuff lol.

Lets hope the tropo picks up but I won't hold my breath on that one.

Andy

very pleased with 96.7! as you know its directional
I've never had it this far inland before!
IIRC i've never even had it at Llandudno!

the channel was blocked my city fm so i went to 96.699 usb mode and
matched the audio gaps with the audio from the car radio which was
tuned to 95.2

Classic 21 in on 87.6 here. It is very weak as I type but about 15 minutes ago it was in good mono. Lille, Benfleet, Tacolneston (usuals) are enhanced.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

34358. Re: [SkywavesDX] Tropo trying to establish again

Yahoo group: SkywavesDX (2014)
Date: 2014-09-03 22:33:53 UTC
From: John Faulkner, Skegness
Topic: 34349 Message: 34358

I am so glad I used the word "trying" in my email title as the tropo did indeed /*try*/, but sadly failed. This tropospheric opening has not produced the distances I was hoping for. This is not to say there haven't been a few good spells but they have been on the brief side.

French and Dutch tropo has quietened down now but I have just noticed NRK Petre on 91.8. It's very weak but hopefully this is a sign of things to come for the sunrise period, as the charts predict.

Good DX!

John

34359. Re: [SkywavesDX] Tropo trying to establish again

Yahoo group: SkywavesDX (2014)
Date: 2014-09-04 09:37:11 UTC
From: Tim Bucknall
Topic: 34349 Message: 34359

i put on RTE 87.8 on in the background while i work- since the
enhancement has been in that direction since 31/8

RTE is currently listenable but not exceptional- fading now i wrote that!

will be watching group posts for suggestions on best way to point
aerial as i don't have time to properly investigate

looks like we get tropo til the weekend!

https://www.youtube.com/watch?v=rcJnpY4gBBs

I first thought this was Bel RTL from Oignies-en-Thi?rache but what I heard did not quite match up to the web stream, although it was very close. I am still not convinced either way. It was definitely not Banquise FM from Isbergues. Any help appreciated. Hopefully there will be some clues in the adverts. There is an ID in here too but the narrowing of the XDR made it difficult to hear.

** Personal Skegness 'First'

The tropo still doesn't match up to the tropo maps in terms of intensity.

Ireland here has been up and down so is unstable which I think is why there's been no long distance DX.

This morning is similar to the past few days just rubbish generally oh Heart 105.2 Carmel has just come up with RDS how cool is that lol.

Andy.

From: John Faulkner, Skegness
Topic: 34349 Message: 34362

Yep. Despite some good signals from a few regulars it's still very disappointing.

Expecting (nervously) Scandinavian tropo this morning I beamed north-east and logged a weak DR P3 on 97.2. That's all. Nice to hear it, but the tropo still hasn't hit the spot.

After reading your post Andy I swing south-west and notice a small enhancement to Wenvoe, but that's it.

Good DX!

John

Yes there is an enhancement to the South and S/W North Hessay Tor still solid.

I have had BBC R London 94.9 for the past 3 days but I have to beam South to null BBC R Lincs.

I rotated N/E last night as Bilsdale was booming in so hoping that DX from over the water might appear but it didn't.

Andy

34365. Re: AW: [SkywavesDX] Bandscans in FMLIST - Troposcatter and Aircraft Scatter Examples

Yahoo group: SkywavesDX (2014)
Date: 2014-09-04 12:17:45 UTC
From: John Faulkner, Skegness
Topic: 34225 Message: 34365

I found a video I recorded in January at the old QTH. This was when I had an FM3 one metre above the ground. horizontally, and the vertically polarised Q Music on 100.7 appeared like this:
https://www.youtube.com/watch?v=T16Hkb99s-E

Now then, this is what I presume to be troposcatter. One single fade in, one fade out. That's it. I would like to hear from you if you agree, or otherwise, that this is definitely troposcatter, because I have always assumed it to be.

This is aircraft scatter. See the difference:
https://www.youtube.com/watch?v=tehqcZO5W84

From: Tim Bucknall
Topic: 34366 Message: 34366

I need to watch Belsat (Belarusian Exile channel) for work

(BELSAT is available through the most popular satellite in Belarus -
Astra 4A (old Sirius 4), position 4,8 degrees E, polarization H,
frequency 12 380 MHZ.
It covers with its signal the entire Belarusian territory, both urban and rural.
Eutelsat 33B (position 33.0°E, frequency 12633, polarization V).

can i use a cheap aldi/ross portable satellite kit
like this
https://www.aldi.co.uk/en/specialbuys/hurry-while-stocks-last/hurry-while-stocks-last-product-detail-page/ps/p/hd-portable-satellite-kit/

or do i need a special satellite receiver?

Yahoo group: SkywavesDX (2014)
Date: 2014-09-04 16:45:09 UTC
From: Andrew Webster
Topic: 34349 Message: 34372

This afternoon I was parked outside our chemist and tuning around I came across RTE 1 88.2 Truskmore until the splatter from North Hessay Tor 88.1 wiped it out.
Yesterday was the first time I received Truskmore now it's 2 on the trot.

NHT has been extremely strong here for the past 3 days the homebrew FM 3 is receiving it with full RDS usually it does not receive it well I also received in Wigan yesterday also with Lincs FM 102.2 with RDS.

At the moment there's bit's of UK stuff hopefully it might pick up tonight as the high should be moving away by then.

Andy

Tropo is *trying* to become established again with a sudden enhancement
to south and south-eastern England. It's not exactly stable but it's
really trying hard again. Will it make it? I am not hopeful just yet.

Good DX!

Well the Hepburn charts have been downgraded so it looks like the dwindles have been at work again.

We will have to wait until next week maybe we will have some good tropo then unless that dwindles as well.

NHT has dropped off here now so it looks like the tropo is moving East as Classic FM 100.6 London is here along with Star Radio 107.9.

34379. Differences between the Kenwood KT-6040 and 6050?

Yahoo group: SkywavesDX (2014)
Date: 2014-09-04 19:47:30 UTC
From: nick gilly
Topic: 34379 Message: 34379

Apart from RDS on the 6050, does anyone know if there is any difference in performance between these two tuners? I read a long time ago that the 6050 has 10(!) ceramic filters compared to the 6040's 8, which seems a bit excessive. Does anyone else know any more?

Thanks and good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Topic: 34379 Message: 34380

Hi Nick, What a hard tuner to research, before l purchased a 6040, l seemed to remember reading that the 6050 had less filters, I honestly can't remember where l read it on the net, as this must have been 6 years ago. If you can't find a user, you could always ask Kenwood for a service manual and have a look at the circuit diagram. Let us know if you find anything else out Damien

Thanks Hannu. Yes I have seen this page before. Unfortunately there seems to be lots of info about the KT-6040 out there but almost nothing about the 6050. I did find an old post on the group by Mike Fallon who said that the 6050 was more sensitive than his 6040 and that it might have had 9 filters but that's about it. There are service manuals available on the net for a small fee but I don't have the background to interpret them and some real-world experience would be interesting to read.

I have managed to find an user manual for the 6050 in German and the specs for selectivity are inferior to the 6040 suggesting either wider filters or less of them, perhaps to allow RDS decoding?

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

34388. Best DX tuner yet? (pity about the price)

Yahoo group: SkywavesDX (2014)
Date: 2014-09-06 10:38:21 UTC
From: nick gilly
Topic: 34388 Message: 34388

A new tuner from Inovonics, the Aaron 650, is available which (allegedly) offers the best FM performance in difficult situations (i.e. DXing) yet according to this Youtube demo:

https://www.youtube.com/watch?v=boZIxsA5mgI

More info from Inovonics website here including specs:

http://www.inovonicsbroadcast.com/model/650

I was alerted to this via the WTFDA reflector group. Pity about the price though: $2390 for the 650 or $1890 for the 'value' 640!!!

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Thanks Nick
has anyone ever used a rebroadcast rx like this for dxing?

I'm fairly sure it won't beat an sdr where bandwidth can be varied infinitely

Thanks Ruud
i would feel blind if i had to lose the spectrum display now or
sacrifice user variable filter bandwidths

with the UK's annoying SFNs spec display is my only hope of id'ing the
tx i'm listening to
thank god so many txs are faulty!

on that subject I heard an unid stn with v wk tlk on 93.5855 at High
Oredish, Derbyshire, I checked //s and ruled out BBC R4, R Scotland &
Radio Cymru
I also ruled out a spur of any of the local stations receivable at the location
so keep an eye out for it if you live in Eastern England

my recent 92.389 R4 heard at Marsh Hill Common must be a spur of
some tx but i can't tell which,its not receivable at home due to the
radio leeds blow torch

can anyone in the south confirm whether Manningtree or Guildford have
a very small wobble on 90.3/92.5?

Wow thanks for that Ruud. I found the demo web page where you can manually tune the receiver and the performance seems to be the same as the XDR but with the added bonus you can see the PI code as well. This could be very interesting to check during a SpE opening.

I wonder what sort of aerial it's hooked up to?

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

34394. Re: [SkywavesDX] Best DX tuner yet? (pity about the price)

Yahoo group: SkywavesDX (2014)
Date: 2014-09-06 12:04:56 UTC
From: nick gilly
Topic: 34390 Message: 34394

PS I found a Turkish station on 92.0 but it's not quite strong enough to trigger the RDS.

I guess if the receiver is based in the headquarters in Burgas on the Black Sea coast this will be a good location for tropo.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

On Saturday, 6 September 2014, 13:01, "nick gilly nickgilly@... [SkywavesDX]" <SkywavesDX@...> wrote:

Wow thanks for that Ruud. I found the demo web page where you can manually tune the receiver and the performance seems to be the same as the XDR but with the added bonus you can see the PI code as well. This could be very interesting to check during a SpE opening.

I wonder what sort of aerial it's hooked up to?

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

On Saturday, 6 September 2014, 12:57, "Tim Bucknall tim.bucknall@... [SkywavesDX]" <SkywavesDX@...> wrote:

Thanks Ruud
i would feel blind if i had to lose the spectrum display now or
sacrifice user variable filter bandwidths

with the UK's annoying SFNs spec display is my only hope of id'ing the
tx i'm listening to
thank god so many txs are faulty!

on that subject I heard an unid stn with v wk tlk on 93.5855 at High
Oredish, Derbyshire, I checked //s and ruled out BBC R4, R Scotland &
Radio Cymru
I also ruled out a spur of any of the local stations receivable at the location
so keep an eye out for it if you live in Eastern England

my recent 92.389 R4 heard at Marsh Hill Common must be a spur of
some tx but i can't tell which,its not receivable at home due to the
radio leeds blow torch

can anyone in the south confirm whether Manningtree or Guildford have
a very small wobble on 90.3/92.5?

Interesting post Nick However, I doubt it will match the 6040,XDR or sdr, the problem with the demo, is they use units that nobody has heard of, so we can't really compare. Thanks for the interesting post Damien Stourport on Severn, UK

34396. Re:: Best DX tuner yet? (pity about the price)

The video is misleading for several reasons. The Inovonics is receiving in mono. Only the Crown receiver is operating in stereo. There is a technical issue involving the RF splitter. The whip is on the rack making the antenna pattern susceptible to nearby bodies. There is more. I have corresponded with the Inovonics CEO about these issues. The receiver may be better than the others, but the comparison in no way proves it. Finally, the Inovonics does not use the patented Sony stereo noise reduction.

Brian

Hi Damien. Apparently the BW Broadcast unit has the same chipset as the Sony XDR-F1HD so I would expect the same DX performance. After trying the Deva Broadcast unit online I have to say that the performance of this unit is also the same as the XDR. So the Inovonics units will be top DXers for sure.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

I've just been having a play with this Deva tuner online and agree, it's excellent. A lot of money though. You'd be better off getting an XDR on Ebay and paying their over-inflated prices.

John

This one is a bit more affordable :)

http://www.inovonicsbroadcast.com/model/633 http://www.inovonicsbroadcast.com/model/633

Not sure if the selectivity is as good, but it displays all RDS fields and covers 76-108 with either audio de-emphasis value selectable. It is 12V DC operated so not necessary to convert mains voltage.

Peter

I downloaded the manual it has selectable DSP bandwidths

IF Bandwidth Control (Menu Screen 19)
This menu is a bit of a misnomer, as this DSP-based receiver
really doesn’t have an intermediate frequency (IF) as such.
But the utility of this menu equates to the same function in
a traditional analog receiver.
The maximum reception
bandwidth of the 633 receiver
is ±110kHz. The
default setting, however
is
Auto
(automatic). In
this mode receive bandwidth
is subject to restriction based on signal reception
conditions. The receiver pulls in the band edges as either
the high-frequency noise component of the baseband signal
increases or as the signal from an adjacent channel encroaches.
Fixed bandwidth values may be manually selected as well.
Push and turn the knob to select: 110kHz, 84kHz,
60kHz
or
40kHz. Unlike AM radio, you won’t hear the high frequencies
roll off as receive bandwidth is reduced. Instead, stereo
separation and harmonic distortion performance will be
compromised to a greater or lesser extent. If the Auto setting
is not effective in lessening ‘splatter’ from an adjacent
channel, try the lower cutoff frequencies to reduce interference.
When a setting is selected, push the knob again to set
in memory.
....

So the narrowest bandwidth is 80kHz (+/- 40kHz=80kHz)

Peter

Who is willing to buy on to try it out?

34404. memories of Red Patch round up (CFN)1956-58

Yahoo group: SkywavesDX (2014)
Date: 2014-09-06 16:13:42 UTC
From: Tim Bucknall
Topic: 34404 Message: 34404

Dear Sir,
I was sorry to hear about your forthcoming closure.
I pass on a few memories from my father David Bucknall who was a fan
of CFN when he was based at Osnabruck (and the Displaced persons camp
attached to it) with the British Army on the Rhine from 1956-1958
"Red Patch Roundup" was one of his fondest memories of the period
along with buying delicious home made Polish food from the displaced
persons.

"Canadian forces broadcasting had better reception and overall a
better mix of music than AFN- (except for the Jazz programmes where
AFN really shined)
British Forces Broadcasting was so pathetic as to not be worth mentioning

Thank you for 2 years of wonderful programming"

This is a bandscan taken from fmscan.org in Burgas Nick.
92.0 is indeed TRT which is a 'normal' one.

Thanks Ruud
i would feel blind if i had to lose the spectrum display now or
sacrifice user variable filter bandwidths

with the UK's annoying SFNs spec display is my only hope of id'ing the
tx i'm listening to
thank god so many txs are faulty!

on that subject I heard an unid stn with v wk tlk on 93.5855 at High
Oredish, Derbyshire, I checked //s and ruled out BBC R4, R Scotland &
Radio Cymru
I also ruled out a spur of any of the local stations receivable at the location
so keep an eye out for it if you live in Eastern England

my recent 92.389 R4 heard at Marsh Hill Common must be a spur of
some tx but i can't tell which,its not receivable at home due to the
radio leeds blow torch

can anyone in the south confirm whether Manningtree or Guildford have
a very small wobble on 90.3/92.5?

Surely if you are marketing a re-broadcast receiver it would have to have wide filters. Isn't the idea that you re-produce the original broadcast as faithfully as possible? For the price being asked - a mid-range SDR plus it's computer would be similar in price?

But these receivers don't use filters - it's all done in the digital domain like the XDR-F1HD. In auto tune mode no doubt it adjusts the bandwidth according to reception conditions like the latter.

What? Of course these receivers have filters! Whether it’s hardware (e.g. murata) or digital domain filtering has to be done – you need to study some receiver block digrams. Automatic bandwidth will reduce filter skirts depending on co-channel interference. The bandwidth algorithms don’t know about Hepburn lol.

One of the advantages of the Konrad XDR mod is that you can choose the filter bandwidth.

What I mean was there are no physical filters in the traditional sense. Plus digital filtering is symmetrical and can have sharper skirts than Murata filters so will probably produce better results. Although the Inovonics doesn't sound as selective as the XDR, you can choose from several bandwidths. According to the manual you can choose between ± 110, 84, 60 or 40 kHz (equivalent to 220, 168, 120 and 80 kHz total). That would be selective enough for most DXers I should think.

I do think the 'LOW SIGNAL' and 'AUDIO LOSS' blinking alarms on the screen could be a bit irksome for DXers though!

It is a pity that the higher-end receivers are so expensive though as I bet the chipsets they are based on are dirt cheap.

Good DX.

The fact these receivers are expensive is nothing to do with the chip sets. They are designed to operate 24/7 for years – MTBF of these professional units will be very different to hifi tuners.

34422. Receivers with known good perf under 88MHz

Yahoo group: SkywavesDX (2014)
Date: 2014-09-07 00:55:50 UTC
From: pu3hag.l@gmail.com
Topic: 34422 Message: 34422

Hello all!

Brazil has started the pilot of the so called Extended FM band. As part of the digital TV dividend, the range between 76-88MHz (TV channel 5 and 6 in Americas) will be used as new home if AM/MW/MF stations.

(Marketing wise, the new band would provide small stations better chance to outbreak modern RFI/QRM and availability in many mobile phones that offer FM reception).

Do you recall receivers with proven DX capabilities at this lower range? Top of my head, I recall De1103, PL390 and Tecsun 660 as good candidates. I wonder if Elad S2 succeeds?

Comments, suggestions, remarks, jokes are most welcome :)

Cheers!

Huelbe

This of course is the Japanese FM band, 76 - 90MHz so a Japanese car radio would be good. Anyone know someone with a Ford camper van here in the UK? These were (are?) a re-badged Mitsubishi conversion and Ford imported them with all the Japanese details changed to English so you can use them in the UK. They even had the controls on the radio changed to English - pity they never thought to specify the CCIR band :-[

From: Tim Bucknall
Topic: 34422 Message: 34425

so its 100% DEFINITELY happening?
awesome!!!!

if Brazil starts it then other countries will follow so we should get equipped
China already has stations below 87.5 btw

The Tecsun 300 & 380 are equal to the 390 & 660 from my experience

the Konrad-modded XDR tunes below 87, JF's OIRT logs from this year
would indicate its performance is good

in the event that the path opened to the UK I would be using the
R9500 but its filter options are limited 7/15/50/180khz and it doesn't
reject noise like the RDR54D1 i use for 50-54 & 87.5-108
so if the brazilian plan is confirmed i would def be in the market for
something more selective

when it rains Jodrell bank radiates garbage down to 82mhz but serious
dx hardly ever happens during the rain

Yes, the modified XDR is very good on the OIRT but starts to break up and act strange below about 63 MMz. It's not designed to tune down that far though so it does pretty well considering. The stumbling block here is the 9.2 antenna which obviously doesn't tune down to the OIRT range. You need a tuned dipole or something more appropriate. Despite this, I heard some very good signals in the OIRT range but mostly they were on the weak side, indicating the need for a suitable antenna. The

The Tecsun option would probably be the simplest and cheapest way to get started. The Tecsun portable I recently sold was not hyper-sensitive on its own telescopic antenna (like some are - the Degen DE1103 for instance) and so it didn't overload anywhere when I connected my 9.2 to it. Sensitivity was very good in fact.

I can confirm what JF says as I use the modded XDR with a Garry Smith HS Pubs VF-1004 45-70 MHz for OIRT. Apart from some images of the strong BBC Nationals here in London it performs well, though around 60-ish MHz is the practical low limit. The software will of course tune what frequency you want but the hardware tuning chip is certainly not rated for below OIRT.

Good Point

I know people who switch the rx on in may and don't switch off til oct
I think thats partly how i wore my SA3ES into the grave

the R9500 can cope with this duty cycle but heats up the room too much

From: sniffingmoose@...
Topic: 34437 Message: 34437

Hello all

I have seen this written on the Radio Today website, so I thought it ould be interesting for the group.
I wonder if this problem was because of high interference due to the tropo! It all helps the cause of keeping FM going kn so called digital britain!

Twitter is full of reports that DAB radio is failing this morning, with Digital Radio UK confirming there is a problem with DAB reception in some areas.
“Broadcasters are looking to resolve this and we will keep you updated.”
It appears to be a particular issue for BBC national stations, with reports of BBC Radio 2 and Radio 4 sounding like they are ‘underwater’. There are no reports of problems with commercial stations.
Some listeners are even having to switch back to FM to continue listening to Chris Evans. (!)
The BBC Says the issue is under investigation by Vodafone.

Unfortunately, there iwitter is full of reports that DAB radio is failing this morning, with Digital Radio UK confirming there is a problem with DAB reception in some areas.s a problem with DAB reception in some areas. Broadcasters are looking to resolve this and we will keep you updated.

I know even slight tropo knocks out the local Nottingham Mux because of interferance from South Wales but I thought that the Nationals were supposed to be syncronised networks so interferance should be no problem unless its coming from mainland europe.

There was a good short-range tropo going on here on the evening of the 3rd and morning of the 4th of September. There was a thread about this on Digital Spy and apparently it was due to a fault in the distribution chain within the Vodafone network:

http://forums.digitalspy.co.uk/showthread.php?t=2006166

Whether it was tropo-related, I don't know.

Good DX.

there is a weakness with DAB SFN's like the BBC mux,
SFNS can't cope with interference from txs over a certain distance away

anyone remember the article?
Jurgen or Julian can explain this so much better!

basically if you're listening to (for example) Sutton Common and
theres some signal from Mow Cop then the distance (delay) is within
acceptable limits for the DAB algorithm to cope with and it does
indeed reinforce the signal.

BUT if theres a tropo and Divis or blackhill starts coming in the
signal is too delayed for the dab algorithm to cope with and reception
breaks up

there doesn't need to even be a lift, if your house is slightly
elevated you may receive a delayed signal from some distant tx that
trashes reception

Hi Tim,

I'd be surprised if your 96MHz is being blocked by baby alarms (baby monitors). The old type TX on 49.xxxMHz, so harmonics at twice the frequency are on about 98.xxxMHz.
I also have a dead carrier at 96MHz which is caused by a desktop computer at my QTH. Even when said computer is in standby, I get the problem. The only way to remove the problem is to disconnect the PSU from the mains. Maybe this is causing your problem too?

Cheers,

Chris 2E0NDT

34447. Re: [SkywavesDX] Re: FM X-band log

From: Tim Bucknall
Topic: 34445 Message: 34447

its not on 49.xxx
the fundamental is somewhere in the range 40.700 i think

i've got harmonics on 144, 432, 96 etc

i can hear the family pottering around on 96.0 so i'm fairly confident

From: Chris Thatcher
Topic: 34445 Message: 34448

Hi Tim,

OK, so your neighbours are using illegal equipment. Great news for you that they're leaving! I had (for one weekend) a baby monitor on 49.832MHz, which ruined my Band 1 DXTV (R1 = 49.750MHz). It was reading 60dB over 9 on my amateur radio, but on the Sunday morning it was no more. I think it was caused by someone visiting one of my neighbours' for a weekend. I'm reliably informed that these 49MHz baby monitors are no longer available, in favour of the newer 1.8GHz DECT variety. So it's unlikely that it was newly bought.

73s,

Chris.

Still to receive this one here.

English and Irish DX is all over the place at the moment. It's impossible to know which way to beam at any moment. Some nice low power catches from the north-east and something Irish other than RTE coming in at last too.

Good DX!

John

UCB booms in here quite regularly this morning it was on the noisy side but picked up at lunchtime along with Mullaghanish RTE 1 90.0 2 FM 92.2 that's the best I have had that here.

Kippure must be on reduced power as it is very low compared to what it usually is.

Andy

Mullaghanish did come in good at lunchtime and yes Tim TV would be good if it was still going I miss the RTE technical broadcasts.

I had a brief French opening France Musique 89.4 Brest and France Info 105.6 Cherbourg so brief if I blinked I would have missed it.

Truskmore is booming in here now also Three Rock is also on the increase along with the other TX's except Kippure which is still below flat levels.

My reception of Truskmore has been helped by a tree across the road being cut down which was in the way.

** Personal Skegness 'First'

Very pleased with today's haul. Tim Bucknall still has the credit of hearing Radio 4 from Divis on 96.0 here while tuning my XDR remotely a week or two ago. I heard and logged it for the first time myself today. BBC Radio Ulster from Divis on 94.5 has no chance here with such a strong signal from Peterborough when beaming west-ish.

```
972 2000 KOR HLCA KBS Hanminjok Bangsong 1, Dangjin (ccg) Time signal,
piano music and ID. Almost equal strength Germany Weak 8740 km
1170 2000 KOR HLSR KBS Hanminjok Bangsong 2/KBS World Radio,
Gimje=Kimjae (jeb) Time pips, piano music, etc. as 972 Weak 8863 km
1413 2000 J JOIF KBC-Kyushu Asahi Hoso, Fukuoka (kyu-fuk) Time signal.
Possible KBC vocal ID in pile-up Weak 9225 km
1566 2000 KOR HLAZ FEBC, Jeju=Cheju (jej) Full ID. Clear. Good signal!
Good 9067 km

Tonight's Asiatic reception was better than I had expected. Some decent
signals, particularly from HLAZ which was blasting in:
https://app.box.com/s/0pz460c1dlqt92p9kk6z

Also heard clearly was Kuanghua Zhi Sheng on 981:
https://app.box.com/s/h1n9wi4fd8de7z9tc9lo

Much weaker, two Koreans made it through - 972 HLCA and 1170 HLSR, both
carrying the same programme which helped me identify them:
https://app.box.com/s/tkpsbqyxo2ve99motnlk and
https://app.box.com/s/3tx85ij99vvq4k6nkbss respectively. The time signal
gives it away but you can hear the presenter in the 972 kHz (first)
recording.

1359 had the usual Chinese pile-up, but busier than I have heard before:
https://app.box.com/s/a0zy30kn3ng30h223oql This even surpasses last
season's BOG DXing! I presume this is a CNR1 ID, but I don't know for
certain.

Finally, a mystery time signal on 738, also heard on a Finnish
DXpedition file: https://app.box.com/s/sk80kwuf44f2isevaesw It wasn't
strong enough to identify there either, but maybe somebody knows who
this is.

This season is really taking shape!

Good DX!

Thanks Tim

Did you hear the strength of HLAZ? Pretty good considering conditions
are still slightly disturbed.

I will upload the 2000 Perseus file from last night. Will post to the
other groups.

Cheers

John

34468. Engineering Mode: Vauxhall Insignia Navi 900 infotainment system

Yahoo group: SkywavesDX (2014)
Date: 2014-09-10 11:21:54 UTC
From: iankelly27@...
Topic: 34468 Message: 34468

I've taken delivery of a new company car in the last few weeks, a new Vauxhall Insignia, equipped with a the Navi 900 infotainment system, which includes FM and DAB.

Courtesy of a YouTube video, I have discovered how to enter into an engineering mode, here: .Insignia Intellilink Navi 900 Secret Menu https://www.youtube.com/watch?v=HonPgpqzWA8

https://www.youtube.com/watch?v=HonPgpqzWA8

Insignia Intellilink Navi 900 Secret Menu https://www.youtube.com/watch?v=HonPgpqzWA8 Opel Insignia Intellilink Navi 900 Secret Menu (Off+Home+Menu hold for 3 sec)

View on www.youtube.com https://www.youtube.com/watch?v=HonPgpqzWA8
Preview by Yahoo

However, I'm no further forward in accessing what we want, features like PI codes and signal strength readout, that I have accessed in previous models.

On the menu, there is an item "SBX-Tuner". However, under the entry for "AM FM Tuner", it says "AM FM Tuner Not Prese"(nt). This is the case whether or not you are in FM mode.

I noted in the video, when that menu is selected, it also says "AM FM Tuner Not Prese".

There is another menu item for "DAB FM Tuner", and this can be accessed, and gives all sorts of data. However, it only gives data for the DAB frequencies, and leaves out FM.

A further menu item is for the TMC tuner (traffic info receiver). This shows data for the two TMC-enabled networks I can receive here, Heart and The Eagle, and even shows their PI codes. But that's it.

Anyone have any ideas?

Ian Kelly

34469. 106.4 "Phoenix FM" (dublin)

34470. Irish tropo

Yahoo group: SkywavesDX (2014)
Date: 2014-09-10 12:44:25 UTC
From: Andrew Webster
Topic: 34470 Message: 34470

Ireland is coming in well receiving Today FM 100.6 Maghera along with all the other TX's and has been an interesting morning comparing reception with John Faulkners radio he is also receiving Ireland very good.

lot's of firsts here presumably due to the weakish signals not swamping the the tuner.

All the reception is via a dipole.

Andy.

Hi John

I see you logged my low power local 102.4 Touch FM. The TX is on the water tower just behind my house in Burton on Trent. Its a relay of Lichfield on 101.6. If Classic FM Wenvoe 101.7 is strong here it takes Touch FM off the air!

Getting a weak 94.0 Mount Leinister RTE Radio Rnag. First time I have heard this at my location as the Water Tower hill behind me blocks Ireland.

Chris Thomas

thats good info Chris!
I can't get 102.4 at home but there are some spots near here where it comes in
if i hear Classic FM on 102.4 i'll know why!

Hi Chris.

Both of those Touches near you used to be a pain when I lived in Nottinghamshire. It's the first time I had this one though. Even Touch 102.0 reaches here all the time. I guess it's the Trent Valley which allows them to travel.

The unstable tropo continues.

Another nice lift to Ireland during the late morning and to the London
area during the late evening, but it's a strange tropo this time.
Signals are good for a short time, then they dip right back and stay at
low level for most of the time. RDS has been a struggle too, requiring
more signal than usual. In the same way we've had a teasing E season
this year, this has been a teasing tropo.

Hi, Would you please tell me what the numbers in the second column represent? I'm thinking of trying my hand at FM DXing with a new PL-310ET. I am new to VHF and am interested in your reports. Can anyone point me to some good background information on FM DXing and propagation in that frequency range? Coming from MW and HF DXing I'm a bit lost. Thanks.

Hi everyone this is my first posting on this group.
I have just acquired a Sony ST-SE500 Tuner.

Is there any modifications available for it.
Like Narrowing filters , connecting it up to a pc etc.

Please forgive me if this has been covered before.

I checked the file area but could not find anything.

I await with interest.

Hi Andy looking at the circuit diagram for the Sony 500 the filters usually 3 of them will be in the tuner can similar to the Sony 520 which I have 2 of them.
I have not found any pictures of the inside so I don't how big the tuner can is on that tuner the 520 is about the size of a cig packet I fitted SIL sockets and then the filters just plug in into them.

The RDS decoder uses a SAA6579 chip which is suitable for connecting to a PC via the audio input details of this can be found in the RDSspy app so if you download RDSspy install it and look at the help pages.

The stock filters are usually 230 Khz and that will too wide for DXing I put 110's in mine as the band here is very crowded.

Andy

We're all learning, all the time. I love the practical side of the hobby but my technical knowledge is lacking.

My location on the east coast gives me a very quiet band and a lot of continental reception via aircraft scatter. In a sense, some of the continental stuff is 'on demand' and relatively uninteresting. I get the same thrill receiving inland DX too. It's about whatever floats your boat. There are no rules.

There can be quite a competitive side to the hobby too. I think I have become more this way inclined when I became active on the ham bands a few years ago. There is no pressure to conform to anything of course. I admit I like to 'collect' stations in my log and keep records. I plan to map out locator squares for everything I have heard here too,

There's plenty of archived material to read through here, but relax and enjoy!

Cheers

John

In a sense, some of the > continental stuff is 'on demand' and relatively uninteresting. I get the > same thrill receiving inland DX too. It's about whatever floats your boat. > There are no rules. Right now I am living in a place with many fairly strong FM stations and very few local AM stations. Since SWL and MW DX is usually a nighttime and winter thing I was interested to see FM DXing is good in the summer. Good to have a sport for each season. I do like the idea of trying to collect states/countries but only to compete against myself since like you said receiving location has a lot to do with what you can hear. > There's plenty of archived material to read through here, but relax and > enjoy!

Is there a website? I don't have a yahoo email so I can't view the group files. Thanks.

if you're a member of this group can read all our past posts- which is
what i think John was talking about

only marginally better than the normal "slush level" tropo scatter
signal but maybe a positive sign?

It's all at the Yahoo groups home page:
https://uk.groups.yahoo.com/neo/groups/SkywavesDX/info

Use the search box at the top of the page and click the purple "Search Groups" button to the right.

Cheers

John

I think this weird semi-tropo period has ended. at least that's the way it is here today. My guess is the tropo engine has been talking to the sporadic E engine and learnt how to tease us in the same way.

You might want to keep an eye on auroral activity over the next day or two as a G3 storm is forecast, particularly for some time tomorrow.

It wasn't me who invented DXing. I thought it was you???

John

Thanks. I believe you can only read past posts if the group's posts are public but if not you have to be a yahoo member. Hopefully the group is public. I'll check and see. Sorry for the way yahoo butchered my previous post. It was actually quoted correctly when I sent it. I'll try to fix it below.

Right now I am living in a place with many fairly strong FM stations and > very few local AM stations. 34496. Ireland lifting up

Yahoo group: SkywavesDX (2014)
Date: 2014-09-12 19:11:26 UTC
From: Andrew Webster
Topic: 34496 Message: 34496

Ireland is coming in well now UCB 87.6 noise free Q102 102.2 with RDS TXFM 105.2 not quite RDS level but good stereo.
I have upgraded my aerial system which I will explain in a seperate post

Andy

34497. Aerial upgrade

Yahoo group: SkywavesDX (2014)
Date: 2014-09-12 20:20:53 UTC
From: Andrew Webster
Topic: 34497 Message: 34497

I have altered my aerials again since I replaced the FM 3 with an FM 5 thanks to John Faulkner I had the FM 3 on my mast at the side of the house for a spell.
I decided to put the FM 3 horizontal above the FM 5 but a few days later it was on a slant due to pigeons so I though maybe I should try it vertical.
So yesterday I went up and found the clamp had slipped a thread so I used a new clamp so I mounted it vertical.

http://i593.photobucket.com/albums/tt15/radioredcat/My%20Aerials/100_1710_zpse151ab9c.jpg

So when I tried the aerial there was Q102 and TXFM and of course Mt Leinster/Truskmore non of these were there on the dipole so I was very pleased.
So after I finished some other jobs sat down to have a tune 87.5 had UK RAW London Pirate 87.5 virually noise free on 87.6 I was greeted by a Spanish station so checking web it was Radio Galega but by the time my recording PC booted up it was fading and then UCB came up. 87.7 had an asian Station which was Indus FM an RSL from Birmingham 87.8 had RTE R 1.

Non of these were on the dipole so I am pleased with the results well worth standing on top of the chimney to erect it lol.

Andy

The new yagi addition looks great, Andy! The view from atop the chimney isn't bad either; a very flat and grassy outlook compared to here (dirty capital city).

Hope the antenna system continues to yield excellent reception on your bands of interest.

Good DX!
Leigh

34500. Danish Scatter

Yahoo group: SkywavesDX (2014)
Date: 2014-09-13 08:25:55 UTC
From: John Faulkner, Skegness
Topic: 34500 Message: 34500

The forecast tropo is non-existent, so I have been beaming around north in the hope of catching some auroral scatter. While the antenna was facing north-east I noted the best scatter I have had from Denmark.

Video here: https://www.youtube.com/watch?v=eVZb3cHmZDU

Bjerkreim, Norway was also received via scatter but not as persistently as Rangstrup.

Keep a check for more auroral today too.

Good DX!

John

Thanks Leigh yes the aerial is working very well much better than the dipole which it should do.

I have had some very good DX with the dipole in the past.

Can't wait for a decent opening then I will have some fun.

Andy

34503. UK RAW Radio 87.5

Yahoo group: SkywavesDX (2014)
Date: 2014-09-13 16:36:09 UTC
From: Andrew Webster
Topic: 34503 Message: 34503

I have been receiving this London pirate most of this week so I have uploaded a video of it.

http://youtu.be/V1tORkLzTsU

At first I thought it was local but mentioning it to John Faulkner I listened to UK RAW on his radio and it was the same so I listened to their stream so that confirmed it.

In the video there is an ID at 2.02 it is noisy but you can hear it well if I can hear it anyone can lol.

Hi,

I'v'e been running the Sony XDR-F1HD with the XDR-GTK (v.03 IDE 1.5.7) together with the JB StationList. It's working nicely.
Does anyone know if this setup can do autologging, perhaps even directly to the fmlist.org?

Rete Uno is just audible on 107.8 when Future Radio fades.

I think this tropo is being better received in south-eastern England.

Good DX!

John (Come on Yahoo. Don't let me down)

Painfully weak but i can just hear Rete Uno on 107.8 when Future Radio drops back.

This tropo looks like it will be better in south-eastern parts of England.

Good DX!

John

Sorry to hear about your aunty, Tim. I hope she has a speedy recovery.

Conditions have deteriorated again. The band is flat. The peak of the reception occurred in the middle of the day, as has been typical of this recent spell of tropo.

Scatter was good again this morning to Denmark and Schleswig Holstein - just the two most regular transmitters, Heide and Flensburg. I think this spell of tropo might have kissed us goodbye now.

Cheers

John

Band 2 Sporadic E:
87.6 1215 S SR P1, Multi-tx YL, as web
*
**Band 2 Tropospheric:*
107.8 1235 SUI RSI Rete Uno, S?ntis (ar) Pops, as web. Just audible when Future Radio fades 917km

Some out-of-season Es yesterday. Well, a single out-of-season E no less. I have the video of this but the signal was trailing away once I got Bandicam recording. It wasn't strong enough for RDS but I can say without doubt this was an E and not MS.

The tropo to Switzerland was a surprise. I heard the station playing pop music, very weakly, when Norwich's Future Radio dropped out.

Good DX!

Small so far but Wrotham is up at about 44 dB (normally 27-28 dB) and Lille is stabilising and reaching RDS levels on 103.7. The London stations are also up a bit.

Maybe this will improve overnight.

Good DX.

Nick, Whitchurch, Hampshire.

Hello

As my house is very high 3 stories I have just paid an aerial installer replace my vertical folded dipole with a Horizontal 4 element beam on my chimney.

I had him point it south west because its the best direction for me at my location. However results have not been good. Signals from Sutton Coldfield 18miles to the south west are so strong that they now overload any tuner that I try. I get mixing products all down the band.

To make things worse I also have a local radio TX (Touch Fm 102.4) only half a mile away.

I guess I may improve things by pointing the beam away from Sutton Coldfield. I also wonder if I could buy notch filters to reduce the signal from my local Tx's

Have any other members had overload problems from their local Tx's and if so do you have any advice. I wonder if I can buy variable frequency notch filters for band 2?

In the meantime I have put the folded dipole in the loft so I can get something apart from Sutton Coldfield & Touch FM.

Just a quick tip Chris....I had the same issue with my 8 element beam, when I purchased a Elad S2 SDR. overload all over the bands.

I got over this issue buy purchasing a 0 to -20db variable attenour from ebay, and fitting inline to the SDR, now the S2 is as good as my old XDR, without the overload.

Something like this.....

TV Aerial Attenuator Variable 0-20Db Freeview Digital http://www.ebay.co.uk/itm/TV-Aerial-Attenuator-Variable-0-20Db-Freeview-Digital-/150673681690?pt=UK_ConElec_TVAerials_RL&hash=item2314d9ed1a

A rotator may help, but in my instance, l had one and it It made no difference, the combo of the Elad having a weak front end, and beam was just to much, even with the beam, turned around. Give the eBay att a try, for £4 quid, it's a cheap fix, for now, and it would really annoying to have a rotator fitted, only to find you still have overload Damien

34540. Re:: RE: [SkywavesDX] I should of known better!

A rotator would be helpful, as you could find the "null" to Sutton Coldfield at 90 degrees either side of the transmitter, plus you would be able to direct the aerial to any direction where a "lift" was coming from.

Cheers,

Chris.

Thanks for your advice and yes I could do with a rotator. However we are thinking of moving house next year so I do not want to spend too much.

Also the local TV aerial installer had never seen a beam for Band 2 before. He did not know which end was the front or the back!

I should have said, this (90 degree "null") would be most effective if you aerial was horizontally polarised.

Some years ago, a tunable high-Q pre-amp was available for FM DXers. It had a silly amount of gain, something like 40dB, but the Q was so sharp that it stopped any overload. This was at my Nottinghamshire location, where my regular gear would suffer slight overload when I pointed towards Sutton Coldfield or Holme Moss. If only these were made these days. The units weren't cheap and I had one on trial for review purposes. If only somebody could make and supply these now.

Thanks for all your replies. I think my best bet is to turn the antenna around by 90degrees and hope for the best. If not its back to my trusty folded dipole. On the positive side, I used to live in Sutton Coldfield just 1 mile from the transmitter. I had a huge 8 element on a rotator and suffered little overload if I did not point it at the mast. I did vey well there with my HiFi rotal tuner in the 1970's at the time, france could be heard under flat conditions. Of course the band was much emptier then with nothing in the UK higher than 97.6 if I remember correctly.

I need help with this antenna, I going to build this Körner but it is very hard to find the details about this antenne.

I know ofcourse the K6STI website but that is not what I look for.
Because there is a strange diameter for the elements and I can not buy them here in the Netherlands.

So I am looking for people who build this antenna for themself and can give me the details about length of elements, how to build the dipole, length of boom and all the other details.
Maybe you have some photos when you build this antenna when he was on the ground.

The diameter of the elements it is easy to buy is 10 mm. So anyone who build this antenna with this diameter and can give me the how to do it would be appreciate.

John-Drieborg.

Here at my location overload alley I have Winter hill 19 km to the North Holme Moss 56 km to the East Sutton Coldfield 119 km to South East Llangollen 61 km to the South all chuck 75 db + except Sutton but it does chuck 75 db when it's in the mood and the result of that is BBC R 2 on 87.7.
I do have a rotatable Triax FM 5 I also have a dipole that receives local TX's at 75 db I recently put an FM 3 vertical for Ireland using the rotator I can null these TX's down except Holme moss.

Holme Moss is the worst when beaming East I get mixing on 99.6/99.9/101.3 but that's it and I do well and use 2 Sony ST-SE311 2 Sony ST-SE520 all fitted with 110Khz filters I would suggest trying one as they virtually bomb proof.

>Some years ago, a tunable high-Q pre-amp was available for FM DXers. It had a silly amount of gain, something like 40dB, but the Q was so sharp that it stopped any overload. This was at my Nottinghamshire location, where my regular gear would suffer slight overload when I pointed towards Sutton Coldfield or Holme Moss. If only these were made these days. The units weren't cheap and I had one on trial for review purposes. If only somebody could make and supply these now.

A late reply - but have been in hospital due to a kidney stone making it's presence felt! Sorted temporaily I hope and a small op due in October. It put me right off DXing for the few days before hand too.

Anyway - re Notch filter for Band 2 - Taylor Bros do a very nice solidly built double notch filter model TBBF2 - it has a max of 28dB attenuation - effectively the stop band is around +/- 1MHz. I use it with the cheapo SDR RTL dongle. Needs a bit of patience to set it up - and is obviously no good for multiple stations. URL is http://www.taylorbros.co.uk/PDF%20PAGES%20AS%20INDEX/26-29.%20WEB.pdf http://www.taylorbros.co.uk/PDF%20PAGES%20AS%20INDEX/26-29.%20WEB.pdf They also do single channel notch filters and these look a good possibility for providing pre-selection in front of a 'better' SDR. There not 'cheopo' but the notch filter certainly allows me to use the RTL dongle over most of the band.

If you buy one of these notch filters and have an RTL dongle - you can certainly tune it in precisely!

A few rude thoughts about the after effects of general aneasthetics! I had no choice but to take out an hours downtime and miss a good part of a good Spe opening.

Mind you - hooray for finding (some time ago) that I can use the ST311 to a scan channels - as I've got two nice log files to analyse and marry up to frequencies/transmitters. Obvious strong opening into the Balkans.

Not sure if this is one station or two. The language at the beginning of the clip is 'different' to my ears. I wondered if it was Albanian to begin with, but the recording has Arabic and then an ID sounding like Nampam FM, followed by Arabic or Q'uranic singing.

Thanks if anybody can help.

There was also Arabic on 92.2. I have received Arabic sounding music
several times on 90.4 and 92.2 when the band has been open to this part
of the Balkans. I don't see anything listed on 92.2 for Albania though.

This is 93.8 and I am hearing what I presume is Greek, though it doesn't sound like Greek I have heard before. It almost sounds as if it has Spanish in it to my ears. I think I hear a NERIT ID in here too, but from the second station it sounds like there are two).

Thanks

John

34572. Balkans Log - Sittingbourne 20 Sept 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-09-21 15:29:37 UTC
From: davebunyan@...
Topic: 34572 Message: 34572

Quite a nice opening with a fair number of stations captured by the scanning set up and uniquely identifiable. Set up now consists of two ST311s - one covering 87.5 - 93.1 and the other 93.3 - 107.8 MHz - but only 30 frequencies in each group. Aerial bearing around 110 deg.

Tropo was also evident with Eins Live on 106.4 or 106.7 popping up a few times in the late evening - and plenty of semi-local from Belgium and Holland that weren't logged.

Usually when it's a romance language that sounds like some weird dialect of
Spanish and Italian and French all rolled into one but I know it isn't any
of them and I just can't identify it it turns out to be Romanian. But I
can't find a listing for Romania on 93.8.

Actually on the web I found several prospects from Romania but unless I'm missing something none of them are in the 2014 WRTH which is unusual. Anyway if you don't have another lead I would look in the direction of Romania.

That's how I hear these languages too. Greek is quite distinguishable
though. It has a kind of Spanish sound to my ears.

Interesting. Do you hear two stations too? It seems to chop over
suddenly towards the end of my recording.

Thanks

John

Hello,

It is definitely Greek, mentioning "NERIT Sport" (speaker #2),
which would be NERIT Third programme .

73!

Thank you Arvid.

I was unsure if I could hear "NERIT" in there. So it's Kerkira after
all. Interesting that when I checked their web stream it was not in //.

Best DX Arvid.

Hello John,

I am a bit more confused now, and I am pretty sure that Your observations are correct, as NERIT Sport should be via NERIT first programme. Might be some other Greek With Reference to NERIT Sports (TV channel ?)

Best dx !

Hi John.

Yes this is definitely Greek and there is an ID of 'NERIT Sports' at 1min 2 sec so it will be from Corfu.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Thanks Microcode, Arvid and Nick for your help.

Yes, that could have been a studio switch.

It really looked like we were going to have a repeat of yesterday's Es
today. The conditions gradually fizzled after I posted.

Good DX all!

John

IDing from a short clip is a lot harder than being there when it
happens. Nice detective work guys!

** Personal Skegness 'First'

Did that really happen? Not only was this an out of season opening, it wouldn't have been out of place in the middle of summer! It's the best out of season Es opening I have personally known.

It was an odd opening at the start. I first realised that Es were around when I noticed C440 on 87.6 on my display at 1356. Snippets of Italy appeard on 87.6 and then it began, gradually building and covering the

Balkan countries mostly.

34587. Yamaha TX-950 fault

Yahoo group: SkywavesDX (2014)
Date: 2014-09-21 21:23:28 UTC
From: fm104rockinstereo@...
Topic: 34587 Message: 34587

After being switched off for several weeks whilst I was away on vacation (unplugged at mains & antenna), my Yamaha TX-950 tuner seems to have developed a major fault which renders it useless for DX.

In a nutshell, it operates like there is about 20 dB of attenuation in-line.

I have checked other tuners using the same antenna & coaxial leads to eliminate anything other the tuner being at fault. I have checked & adjusted all the trim pots (VR 3-6). Further, the ceramic filters are all functioning. CSL (Computer Servo Lock - automatic bandwidth control) still works, albeit only on local strength signals.

If I had to guess, I would venture it might be an IF amplifier problem somewhere in the FM section. Putting a 19 decibel preamp in-line makes performance satisfactory for listening on the city & coastal stations. But it I wanted to listen to contemporary music, I would put on an album, right?

If anybody can help me with a service manual or other suggestions it would be most appreciated. I can't find this 'overnight deafness' symptom reported on the FMtuners Yahoo forum with this particular tuner (nor it's older sister, the TX-930). Putting the tuner into an electronics repair service is a last resort for me, since the labour / component costs might cost more than the tuner is worth (but ultimately might be necessary due to lack of time).

Thank you
Leigh

Leigh, the Tuner Information Center has a schematic for the TX-930 here:

http://fmtunerinfo.com/TX-930schematic.pdf

Maybe this will help to try and find out what's going on with it.

Good DX.

Nick, Whitchurch, Hampshire.

You can download a full service manual from
elektrotanya.com/yamaha_tx-950_tuner.pdf/download.html If you haven't used the site before - it takes a few seconds to download the manual - just below the large box you will see a line which ends in "Processing"
after a short while it will change to "Get Manual". Click on it to download.

Failing that e-mail me and I will send you a copy of mine.

I presume you've checked that the RF Attenuator function is working correctly - and hasn't failed in the attenuated position
Also that the trouble is the same on both antenna inputs.

Hope you can work your way through it logically - the TX-930 which I have is a great tuner - especially once I added a RDS decoder chip on a small circuit board to feed RDSSpy.

From: fm104rockinstereo@...
Topic: 34587 Message: 34593

Thanks Dave & Nick for your schematics/manuals. I have now downloaded & perused these files.

Good advice, Dave. RF ANT seems to be working as per usual, cutting down the signal level of local stations on the signal meter. The symptom is the same on both ANT A & B inputs unfortunately.

If it is the two MOSFETs in the front end (TOSHIBA 3SK101) then this fault is beyond my soldering / repair abilities, although these babies are cheaply available at the retail level. In the 1990s, yes I would have bothered. My sight, both long distance & close up has deteriorated in the last five years.

After some preliminary enquiries to take this in for repair would cost at least $120. Some places charge $60 to even look at it. Does anyone out there take these component tuners in for repair any more? Please let me know.

An excellent tuner which I have owned for less than a year. It is in immaculate cosmetic condition, apart from a loose rotary tuning knob (easily sorted).

It will be a real pity if I have to throw the TX-950 because the TX-930 & TX-950 are easily the best tuners I've owned. I actually took the older sister TX-930 onto vacation last week. On two nights at the beach it pulled in 744 km unusual spring tropo (high powered 100 kW stations).

Cheers
Leigh

Have you checked the antenna and feedline? They are very much more likely to go bad than a solid state tuner. Does substituting a known-good antenna and new cable change anything?

Have not been following this whole thread so if what I said was already said or irrelevant I apologize. If not, the simplest answer often turns out to be the right one.

Hi Leigh,

Getting older is certainly a curse – I guess were are of a similar age. Given that you may pay over Au$200 for a TX-950 from the USA via e-bay – it's worth persevering.

Get yourself a magnifying headband – the type which offers two magnifications plus a 10x loupe. It makes all the difference in the world! It will cost around Au$11.

For a stable VHF FM signal source buy a small wireless fm transmitter – around Au $4.69 – then wrap a wire around it to feed the signal into various bits of the front end. Can be invaluable for front end alignment.

You would have to build a 10.7MHz crystal oscillator to inject signals into various stages of the IF chain to try and determine if one of these stages has broken down – circuits are on the web – basically a single TTL chip with a 10.7MHz crystal – and possibly a 555 chip to provide FM deviation. I'm going to look into that a bit further as a little project for myself. I think you would need an AC voltmeter – or DC voltmeter with a diode in series on the AF output. There is bound to be loads of info on the web and there is also info in the service manual.

Looking at the TX-950 circuit itself – the 2nd MOSFET is the local oscillator – so as your problem is reduced sensitivity, I would not expect anything to be wrong with that one – else you'd have no signals at all.

As a preliminary you can check the voltages at various points round the front end as typical values are given on the circuit diagram. But get the magnifying headband first – so you can be precise when placing the voltage probe!

Treat it as a project – and if you are anything like me – document what you do step by step – or get confused.

Alternatively if you don't have any 'powerhouse' FM stations nearby you might go and spend a few dollars on a RTL2832-SDR dongle! But not one with an R-820T chip as they are deaf on Band 2 FM.

From: fm104rockinstereo@...
Topic: 34587 Message: 34598

I see there is a TX-950 available for the next few hours from the States which is at least $210, if I am the only bidder. The benchmark T-85 also (via Buy It Now) costs $323 from the US. (Prices including shipping).

I have owned six solid state Japanese component tuners (1990s vintage). Based on my experience with six Japanese component tuners (all 1990s vintage) them I would tend to agree with Microcode that this symptom is fairly inexplicable. None of exhibited any faults other than power supply problems.

Off the top of my head, the only thing that has changed since it was last working perfectly is new carpet in this room (tiled floor, so no carpet before) perhaps resulting in a static charge to a MOSFET. Alternatively, a lightning hit to the antenna but since my DVB STB and LED TV are plugged into the the same three-way antenna switch surely these would have suffered some damage. Just guesses!

The TX-950 was lying unplugged on top of a Marantz hi-fi amplifier so possibly some heat may have been getting in whilst I pump out some tunes on a Friday or Saturday night... but it has been unusually cold so I would think that cause may be even more unlikely!

On Monday night, I fixed the tuning knob which took all of five minutes. As per Dave's suggestions I will spend an hour checking the voltages with the multimeter as specified on the circuit diagram.

However, due to lack of time other weekend antenna projects must take precedence before the October/November tropo onslaught begins. Unfortunately, these projects involve other parties so I'm committed whether I like it or not!!! The timing could be better!

After I check the voltages (which I will do on Tuesday/Wednesday night) I really have two options:

(a) leave it until next year when I may have time;
(b) get it serviced now from an authorized Yamaha dealer (taking into account it will probably take a couple of weeks to repair) or
(c) buy a 30 dB preamp for under $60 (a 20 dB preamp makes it 'usable' for local reception but it needs more gain) so it can be used (or more likely, given away to a family member) as an entertainment tuner. Yeah, it's a waste I know, but that's life!

If I choose path (b), from the Yamaha website I have located three in the Brisbane CBD - minimum quote fee is $85.

Cheers
Leigh

'And now the good news!'

After two hours of manic behaviour, changing every trim-pot (well, apart from the IF Offset, Separation & Signal Meters) and taking at least a dozen voltage measurements (all of which were roughly on-spec) the TX-950 is now working perfectly! I guess persistance pays off. Let me name and shame the culprit:

T9 - Discriminator Balance Adjustment

The problem was CSL was NOT functional resulting in a severe lack of sensitivity, akin to placing a 20 dB attenuation pad in-line. This seems to have been primarily due to the malalignment of T9. Presumably T9 had bizarrely fallen out of alignment due to sound vibrations and/or heat, because of the tuner's placement upon the amplifier. But it's been sited there almost a year without issue, so 'go figure'?

There has been suggestions by at least one correspondent on the FM Tuner Yahoo forum that the TX-950 seems to fall out of alignment for no apparent reason so perhaps this may be a quirk? (Or I'm going nuts).

The earlier TX-930 does NOT from this particular flaw but exhibits other 'foibles' notably occasional the CSL 'misbehaviours' when in the presence of extremely strong signals which have been previously canvassed on this forum.

T9 had to be adjusted very precisely so that the CSL indicator (and accordingly stereo decoding on all locals) would appear on any weaker stations. Confusingly (to me, anyway) the CSL indicator would always appear on strongest stations even during the 'fault' which led me to erroneously conclude that CSL was functional.

If I remember correctly, adjustment of T8, the Local Oscillator Coil may have also played a role. (When you are working for two hours non-stop it becomes a blur).

I now need to change the filters (I had not done this yet, as it was quite selective in stock form on the combination antenna) and adjust VR2, the IF Offset per step 12 (on page 8 of the service manual).

Thanks to all who offered their assistance! Good karma will surely flow your way.

Good DX!
Leigh

That's great! Not something I would have thought of - but having said that I've aligned my TX-930 in the past and vaguely remember that if you turn the adjustment too far one way or the other the signal drops right off.

Now some advice on what to do after replacing the filters - and myself I favour 2 x 150 and 2 x 110 for best compromise on RDS decoding (remember I have fitted a convertor board to my TX-930).

You will find your frequency alignment will almost certainly go to pot - as you are unlikely to get dead-centre frequency filters - but the good news is that the TX-930/950 has a trimmer pot marked "IF Offset" specifically designed to compensate for this. If you search the conversations on this forum you'll find some posts - including from myself - about this. The main thing to be aware of is that each time you make an adjustment to the IF offset trimmer you have to power off and power on again for the change to be effective.I was going round in circles until I realised this - one momnet alignment almost there - next moment 100kHz off - as I turned the pot all the way to one side. Needs a bit of patience and fine tweaking to get the narrow position spot on to the 0.01MHz but again very worthwhile.

The second thing I found really worthwhile to do - is to disable the CSL circuitry 'permanently'. This is easy to do and I've actually fitted a mini toggle switch on the base of the tuner so I can enable/disable as required. I found the CSL would cut in/out on weak fluttery signals in a most annoying way. Modification involves one wire a resistor and the toggle switch. I'll need to check my notes - but I'm sure I posted details on this forum.

Hi,

PI code 508C is used by Radio Mana Mana and Radio Calibri. As you say - not listed on 89.1.

However searching on FM List for "Mana Mana" came up with a transmitter on 89.1 MHz located at "Guarcino/Frazione Campocatin". It's listed as using PI Code 50F8 and PS:RADIO___

All the other Radio Mana Mana transmitters are listed as using 508C so maybe the one on 89.1 has been changed to be consistent.

Topic: 34609 Message: 34616

Hi, also R.Milano Uno has been using this PI (508C). Late last summer R.Cusano Campus, Cusano (RM) was heard on this 89,1 but don't know does it use PI or not. PI is always PI, audio ID is a good ol'id ;)

Hannu (first snow here in Finland today, Joensuu area), "good" chilly winds today.

Well done John I heard Rete Uno via Johm radio and I think I heard SRF 3 on 105.6 as well.

Andy

From: davebunyan@...
Topic: 15224 Message: 34620

Tropo is certainly certainly trying to come through. A very weak German male voice appears to be b5 Aktuell from Wendelstein, coming and going with a weak german female voice - from Antenna Neidersahsen - Steinkimmen.

Hope it develops more during the evening. I'm making good use of the RTLK dongle with narrow bandwidth - but if signal strength go up much it will overload.

Rgds

From: fm104rockinstereo@...
Topic: 34587 Message: 34621

CSL

The biggest annoyance with the TX-930 is more the occasional 'switch-on' CSL bug when it tunes into the wrong frequency when first powering up. For example, it will lock onto 106.1 MHz (instead of actually 105.9) when tuning to 105.9 MHz, if there is a powerhouse signal on 106.1 MHz. It did this only once last week whilst on vacation. Switch it off at the mains for 10 seconds and it works OK. This symptom has also been reported with the 'gold standard' T-85 & other CSL-based tuners according to FM Tuners forum. I have not noticed this symptom yet on the TX-950 after almost a year of listening. Interesting.

IF Offset / Filter replacement

I agree with Dave that the IF Offset is tricky. I adjusted this on the TX-950 last year, as when it arrived in the post the stock filters exhibited a noticeable bias to one side. For example, to hear a signal on 97.9 MHz sans heavy splatter clearly you would need to tune 97.88 MHz. A terrific feature, so definitely worth spending half an hour or so perfecting.

Fortunately, I do have some brand new 80 kHz filters left here. I doubt I will need to use them, like Dave I will stick with the 110 kHz and 150 kHz if possible. I will also try in the wide postions (near Q69 / FI4 & Q51 FETs) a few surplus GDT (Flat Group Delay) 150 kHz / 180 kHz filters lying around as these exhibit noticeably better fidelity. I have some inside my Sherwood tuner which is coupled to RDS Spy.

Filter positions

If Dave can double check on TX-930 (not at all urgent - I will also check on my 'modded' TX-930 over the weekend - it isn't at this location at present) I believe the wide filters are FI4 (near Q69 FET) and FI7 (near Q51 transistor). IIRC, FI1 is left untouched as is only used for MW.

Vintage tuners in today's SDR world

I still prefer these bulletproof Japanese component tuners for live listening. I can't really explain this preference, but I think a big part of that enjoyment might be the ability to 'tinker'. And if very crudely maintained, they potentially last forever. If I win the lottery, I will buy a TX-1000 from Germany! She is (subjectively, of course) ranked at #2 for Yamaha's most selective tuners. TX-930/950 is #3.

No doubt Andy will solve the Sony issue in due course, it sounds almost as odd as the symptom I described here!

Leigh

34622. Re: [SkywavesDX] Re:: Yamaha TX-950 fault

Yahoo group: SkywavesDX (2014)
Date: 2014-09-23 17:51:49 UTC
From: nick gilly
Topic: 34587 Message: 34622

Glad to hear that your tuner bug has been fixed Leigh. I haven't got a set-up for an SDR as I would also need to buy a suitable PC and the listening 'shack' (well, a bunch of tuners in the corner of the living room) is cramped enough as it is! So it's 'traditional' tuners for me for the foreseeable future.

Actually, although it is only comparing two specific examples, I found my Yamaha T-2 to be just a hair more selective than my T-85. The specs agree: the T-85's alternate channel selectivity is 90 dB, the T-2 is 100 dB. So the TX-1000 might be #3 on the list ;-)

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Hi Jim,

Well, you can join the club of DX-ers that did receive this tx. Out of many UNID SNRT tx-ers from Morocco, this is undoubtedly the most frequently reported one. Although having been a UNID site for long, I haven't seen anybody that knows the location. We somehow should get an updated listing of all SNRT transmitters, since there are many unknowns.

Maybe Samir (hopefully still a member of Skywaves) can write an e-mail in Arabic and send it to SNRT?

Hi John,

some suggestions after listening to your videos uploaded on vimeo.

1356 87.7 Rai Radio1 (clear bumper between ads).
1358 89.0 Rai Radio1 (I recognize the voice of saturdays sport magazine)
1358 91.1 Rai Radio1 (connection from a football stadium)
1449 93.6 Rai Radio2 (Monte Belvedere Ts)
1450 95.8 Rai Radio3 (Monte Belvedere Ts)
1459 88.9 HRT-HR1 (Dubrovnik/Srđ (DU)) Clear ID "Hrvatski Radio Prvi Program"
1504 89.4 Radio Deejay (Muggia/Chiampore TS) Id during announcer speach
1531 91.0 (very likely) Radio 057 (Zadar/Bili brig (ZD)) Local adv nominating "Zadar" 3 times in a row

Best 73's

Franco

I don't remember, when the propagation on band 1 start from east or
south-east,
I can see many carrier on R1. The strongest is '1 tv' from Russia with
offset 8p.
May be, this transmitter is in area mountain Caucasus, because at same
time on
R2, R3, R4 I can receive stations from Armenia and Georgia. I think,
Iran is single
skip from me.

G'day Nick

I'm sure I cannot afford it but the T2 looks very interesting, nice rotary knob and analogue dial. The last analogue dial I had was the budget (low tier) Sansui T-80. Good memories, it appears on the FM Tuners web directory. The only reason I am so tempted with the TX-1000 over the T-85 is the rotary knob.

I thought buying the SDR back in March would cure me of the 'conventional tuner' addiction. Apparently not! There are worse addictions!

Good DX!
Leigh

34638. Band II Tropospheric Loggings for 23 September 2014 (completed)

Yahoo group: SkywavesDX (2014)
Date: 2014-09-24 08:43:11 UTC
From: Janpeter van Dijk
Topic: 168 Message: 34638

Hi All,

I was a bit too fast with publishing my loggings. Conditions made a return late in the evening, upgrading this day from nice to good.
Below is the completed log for yesterday.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Tuesday 23 September 2014
Band II Tropospheric Loggings:
MHz UTC ITU Program + Location km
87.70 0706 D Welle Niederrhein, Krefeld-Bockum (nrw) 167km

88.20 0758 D Bayern 2, Büttelberg (bay) 508km
88.30 1044 D SWR1 Baden-Württemberg, Raichberg (bwü) 527km
88.50 0831 G BBC Radio 2, Pontop Pike (EN-DUR) 518km
88.50 1106 F France Culture, Bourges/Neuvy (18) 548km
88.70 2213 D Bayern 2, Grünten (Allgäu) (bay) 653km

89.50 1516 D Bayern 2, Wendelstein (bay) 725km
89.90 0717 G BBC Radio 2, Wenvoe (WA-VGL) 539km
89.90 1634 D SWR1 Rheinland-Pfalz, Weinbiet (rlp) 394km

90.80 0631 D 90.8 Radio Herne, Herne (nrw) 196km
90.90 1041 F France Inter, Bar-le-Duc/Willeroncourt (55) 379km
90.90 2131 AUT Ö1, Salzburg 1/Gaisberg (ORS) (sal) 777km

91.20 0631 D Radio 91,2, Dortmund/Florianturm (nrw) 215km
91.70 0633 D Radio K.W., Moers/FMT Forststr. (nrw) 163km
91.70 0802 D MDR 1 Radio Thüringen, Sonneberg/Bleßberg (thü) 488km

92.10 0718 G BBC Radio 3, Wenvoe (WA-VGL) 539km
92.50 0632 D Radio MK, Iserlohn/Seilerberg (nrw) 236km
92.70 0634 D hr3, Hardberg (hes) 413km
92.70 1042 F France Musique, Bar-le-Duc/Willeroncourt (55) 379km

93.50 1511 D SWR1 Baden-Württemberg, Hornisgrinde/SWR (bwü) 466km

94.80 2231 AUT Ö2 - Radio Salzburg, Salzburg 1/Gaisberg (ORS) (sal) 777km

Thank you Tim. Yes, in NL we have some advantages in relation to the DX hobby. Not only there is water everywhere, the country is flat a a pancake. While being surrounded by countries that have their transmitter sites built on hills or even mountains.
Having said all that, the big disadvantage of almost any location in NL is the ridiculous band congestion.

I hope you have a good time in Eastern Europe.

73, Janpeter

102.3 1645 D BR Klassik, Wendelstein (bay) Barely audible between Lincs and an enhanced Heart (102.4) 1024km

Unidentified:
A classical music station which kept appearing on 107.8 throughout the afternoon. It wasn't DLR Kultur or Figaro.

** Personal Skegness 'First'

104.0 SWR4, Feldberg was the first German station to appear via tropo, then followed by Gottelborner Hohe and Hornisgrinde. Signals were very weak throughout this all too brief tropo.

It was a coincidence that Wendelstein suddenly appeared on 93.7 via a good meteor burst while it was being received by tropo elsewhere at that time. I guessed Bayern1S pointed to the Sudbayern service but I see this is listed as "Oberbayern", so I wonder if this is a corrupted PS.

Good DX!

Nice signal level, and an interesting catch.
The PS is not corrupt. Bayern 1 has two different levels of regionalisation and uses three combinations of PI/PS, here for example the Wendelstein tx:

Bayern_1 D311
B1_Obb__ D411 (Oberbayern = Upper Bavaria, used every 30 minutes for 3-5 minutes throughout the day)
Bayern1S D411 (S= South, there is also Bayern1N D511 from other sites at the same time, i.e. Mo, Tu, Th, Fr 1702-1755 UTC)

But PI D314 is BR Klassik, 102.3 from the same site.

73,
Günter

Thank you G?nter.

So the PS was correct after all. Now I remember, the "S" part of
Bayern1_S_ was in black text on the XDR display, confirming that this
part should have been correct.

Cheers.

John

34644. A simple question

Yahoo group: SkywavesDX (2014)
Date: 2014-09-24 11:05:15 UTC
From: Brock Whaley
Topic: 34644 Message: 34644

Please, if I may, a simple question on your fine reports. What is a PS code? I take it that it is readable on some of the better receivers. Much like an RDS ID. I am from the states, and the term and info it contains are new to me.

I am 12 miles south of Limerick. My main FM DX receiver is a fun cube dongle pro +. I am using an indoor dipole. Not much, yes, but I have received plenty of tropo and E-skip on the device. I doubt it will read "PS." However, this simple set-up gives me dependable 24/7 reception of the BBC and Classic stations from North Hessary Tor, a good 236 miles from me.

I suspect the Galtee mountains offer some sort of refraction. There are between the XMTR and my location. Of course E-Skip and high co-channel tropo will win out over my normal BBC reception.

I also use a 1956 Grundig valve radio I refurbished. The FM coverage stops well below 108 MHz, and it is not as sensitive as the dongle, but the warm audio and bass response can't be beat. Real radios glow and get warm is true in some respects.

Thanks in advance for your answer. And off topic, but some may use this as an aid for ID's during tropo, RTE will close the 252 long wave transmitter on October 27.

Hi Brock,

The "PS" is part of the RDS data signal carrier on a sub-carrier on most FM stations. The station name that appears on a car radio eg RTE 1, BBC R3 etc is the "PS". Then another part of the data signal is the PI Code. It's the PI code that is very important to DX'ers as it is decodable at a lower signal strength than the station name. Once you have PI code - a four digit/character combination you can then look it up on the web-site - FMList and it will will you what stations use that pi code. Unfortunately pi codes aren't unique, but a combination of station frequency/pi code helps narrow the choices down.

Normal radios don't display the pi code - a lot can't, and those that do you have to find out how to do it from user instructions

If you are using the Funcube Dongle plus with SDR Sharp software - it has built in RDS decoding. With a bit of sorting out you can use HDSDR software in conbination with RDSSpy software to display the PI Code, PS, rolling text and other stuff - and more importantly store to a running log.

Hope that helps answer your question - you can get quite a bit of info from www.rdspsy.com

Hi Brock,

PS is part of the data transmitted via RDS (or RDBS, as it is called in the US). It is the "Programme Service Name", sometimes abbreviated PSN. It is basically a 8-character text with the station/program name, and almost any radio with RDS will just display this information when tuned to a station.

The term "RDS ID" technically does not exist, but is sometimes used as synonym for the PS, see this video: http://www.youtube.com/watch?v=ewLRZx6Axtg.

A PI (program identifier) is transmitted as core data via RDS, but that is displayed only on a few consumer radios. It is received even on weak signals (it requires a better signal to decode the PS) and often uniquely identifies the program.

In order to see the PS with your FCD, you wil need software. A good combination is HDSDR and RDSSpy, where RDSSpy wil take care of displaying ALL the RDS data, including PS and PI. Which software are you currently using?

David,
Thank you very much. That answers my question. I do use "FM List" as a guide to station ID's and "DXmaps" to check conditions on 6 an 4 meters as well as the 60MHz and FM bands.
Kind regards,
Brock

Gunter,
Many thanks. I will look into the software. I am using the suggested support that came with the first dongle I ordered over two years ago. I will check out the software you suggest. As it is, I am able to read station names on the dongle, but a transmitter ID would be a nice asset to have during deep E-skip pile-ups.
Many thanks and good DX!
Brock

34652. Aerial Switch box for VHF with high isolation

Yahoo group: SkywavesDX (2014)
Date: 2014-09-25 14:02:13 UTC
From: davebunyan@...
Topic: 34652 Message: 34652

Having put my homebuilt aerial switch,or more correctly – patch box – through a lot of use since I built it I've decide to re-post details.

The only decent aerial switch I've come across is a "Hi-isolation Cable Switch" which is fairly cheap and has very good isolation – better than 60dB in Band 2.

The problem is - I want to switch between at least four aerials. To cut a long story short: I tried 'cheap' RF relays, singly and in series, and I tried a ceramic RF switch. The best isolation I achieved was only 40dB or so. Which is not much use when local stations are 60-70dB! The problem is stray capacitance – it only needs a pF or two to pass VHF signals very efetively.

In the end I decided to see what isolation there was between two adjacent f-sockets with no connection between them. The answer was effectively - complete isolation.

The end result is a small diecast box with five f-sockets bolted along one edge and five phono sockets bolted on the base. A thick very short wire connects a phono socket to an f-connector. One f-connector is connected to the tuner input and four aerials are connected to the remaining four. Then a short piece of shielded cable with a phono plug on one end and the other end passed through the middle phono socket and soldered internally provides the jumper lead. Total lead length including the phono plug itself is about 125 mm.

Just for completeness – sockets 1,2,4, and 5 are the inputs. Socket 3 is the output and the jumper lead is just long to plug/unplug into the outer sockets without strain. Being lazy I chopped a 5 inch length off a spare bit of audio cable which had a moulded plug on it – I don't think I need to worry about mismatches.

The result is isolation between aerials that is almost as good as that between the aerial inputs on my Sony ST-920 and as good as the isolation on the Yamaha TX-930 – when plugged into a position with a dummy load atached.

Or to put it another way – Wrotham transmitters which show 58dB with the aerial pointed straight at them are just above noise level and barely intelligble. Classic FM at 65dB and Heart on 102.8 at 70dB are very noisy mono.

With that sort of performance I'm more than happy to put up with the slight inconvenience/delay of having to physically plug/unplug. If ever it becomes necessary it would be a five minute job to replace the jumper cable if every it braeks down internally.

Please note in particular that, unlike coax sockets, the phono sockets keep a solid grip of the plug. Whereas where I have, elsewhere, to swop over coax leads I have squeeze the outside of the coax sockets with pliers from time to time to maintain a good grip.

I hope this might be of help to others who want to switch more than a couple of aerials and for what it is worth I've posted a picture to the files section – which should appear in due course.

Total build cost is under £10 as the connectors are very cheap over the internet - but it's cheaper to go into a Maplins a buy the box if you can. Box size is 111 x 60 x 27.

As another aside - I've stuck one of those large flat flexible "my dad is the best dad" type fridge magnets logos to the bottom of the box with double sided tape which is more than enough to hold it in place on the top of the stack of tuners.

Rgds

Some good Dutch tropo at the moment, but I am trying to avoid going vertical as Germany is pretty good at the moment, mainly to central areas.

If the tropo comes off as forecast then Polish DX might be possible.

Good DX!

John

Well, the charts suggested Poland but nothing from there so far. Nice to hear Salzburg on 94.8 and 99.0 anyway. 94.8 is difficult but 99.0 is mixing equal levels with Hoher Meissner at the moment.

Good DX!

John

Hi Jozsi, maybe EGY ?. Px/news bulletin oriented to international listeners. At least Ismailya mentioned there.

http://en.wikipedia.org/wiki/Isma%C3%AFlia

The interval signal would be a good item to identify for those who know and have better knowledge (about Egypt).

It would be nice to get something exotic like Poland - propagation forecast suggest it may be possible from my location. The problem is finding a clear frequency with a high power transmitter located in western Poland. At the moment 102.30 MHz is as clear as I'm likely to get - so I'll be checking back frequently.

14:48 102.3 MHZ - BR Klassiek - Wandelstein - tx id from aerial bearing
15:10 94.8 MHz Austria Program 2 - Salzberg "these boots are going to walk over you" on - .

Good DX today!

David

What is the approximate distance?

Trying to id/verify Morrocan stations does seem to be more difficult than
usual.

Hi Tim the RSL on 87.7 is most likely to be Radio Silverstone which I was receiving on and off yesterday but last night it came back and gave had a clear ID.

87.7 - Silverstone, Northamptonshire
Motor GP radio commentary
On Air From: 30-03-2014
to : 24-11-2014

Andy

Well I am speechless. I have recordings too so that's a relief. It's not easy to record and DX sometimes, especially when some of the signals are very weak and noisy, but these were quite clear on the whole and some include IDs. It's quite clear what they are anyway, though you might need headphones with one. I will post later once I have caught up with everything else. Currently about three days behind with logs.

It's just about gone now but Brno 87.6 is just about hanging on.

Cheers

John

34696. Band II Tropospheric Loggings for 27 September 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-09-28 10:27:48 UTC
From: Janpeter van Dijk
Topic: 168 Message: 34696

Hi All,

Yesterday was a great day for tropospheric Band II DX. Conditions gradually increased throughout the day and not just from one direction. Never before did I receive Switserland, Czech Republic, Austria and Poland on a single day. If I am not mistaken, I have not even had this in my days as TV DX-er.
As I type this, conditions are still going very strong.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Well I am speechless. I have recordings too so that's a relief. It's not easy to record and DX sometimes, especially when some of the signals are very weak and noisy, but these were quite clear on the whole and some include IDs. It's quite clear what they are anyway, though you might need headphones with one. I will post later once I have caught up with everything else. Currently about three days behind with logs.

It's just about gone now but Brno 87.6 is just about hanging on.

Cheers

John

Congrats on the Czech and Polish FM catches John. I knew it would only be a matter of time for you.

I had to go out early this morning, so didn't get a chance to listen. I take it the conditions have "burnt off" now, if your skies are as blue as they are here now? A quick check to the east here just now didn't even render anything from Germany, let alone anything further east.

Nick had Brocken earlier on but very weak. Nothing further than Luxy on 88.9 here, conditions just above normal.

Congrats on the Czech and Polish FM catches John. I knew it would only be a matter of time for you.

I had to go out early this morning, so didn't get a chance to listen. I take it the conditions have "burnt off" now, if your skies are as blue as they are here now? A quick check to the east here just now didn't even render anything from Germany, let alone anything further east.

Hi John (Faulkner),

I see you have been logging Graz, which is just another incredible catch. I would suggest you know go for the jackpot and try to get Hungary. You are very close!
I am glad to let these signals pass overhead of me, my local band is too crowded anyhow.

Hi Andy.

Valazské Mezirící is 1304 km / 810 miles from here.

Graz is 1261 km / 784 miles.

Valazské Mezirící is only 17 km / 11 miles from the border with
Slovakia. That was so close! Interestingly, Valazské Mezirící was one of
the strongest of the signals from the Czech republic..

I don't know if I dare hope for more of this later. Recordings and log
asap.

Good DX!

John

Hi John,
I managed to pick up Czech republic by checking which frequencies you logged that were clear here (not many!) and on 102.00 by careful listening I eventually got reception of CRo2 for a brief period when some very distinctive music was being played. It was the only long-haul DX for me.

Saturdays' reception was interesting insofar as the "local" DX from Holland/Belgium was very strong, but the usual German station in the range of 390-480km were only just noise free in mono and then there were a good number of German stations in the range 630-690 km - so a very clear case of tropo ducting. Plus, earlier in the day some stations over 900 km including on from Austria.

Certainly some good DX

Hello Janpeter.

It's credit to Nick who was tuning my XDR remotely at the time. It's probably best to let Nick describe the reception, but he was sure it was not MS or Es. It may be some kind of assisted tropo, perhaps by scatter, but this produced a PI code which I saw on my screen. 37dB was recorded.

Good DX!

John

Excellent Dave. Glad you caught this.

Holland was a pest at times here. I had to do a bit of careful slanting
of the 9.2 to remove UK and Dutch signals.

What Austrians did you receive?

John

Well, to add to this, there was MS around the time of the signal from Graz, but all very weak and choppy. The Graz signal behaved in a completely different way. It was already steady when I found it on 89.2, peaked shortly afterwards with the PI code visible for quite a while, and then gradually faded away, with slight flutter and the regular cyclic fading that typifies aircraft scatter visible on the signal trace. With any other 'normal' signal I would have sworn it was some sort of aircraft scatter.

Very odd but very interesting!

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

Hi John,

The Austrian station was O2 on 94.8 from Salzburg - at 1405UTC - just a few minutes after BR Klassiek from Wandelstein on 102.3MHz.

Again it was a case of sitting on frequency until the signal was strong enough to give a positive id against the webstream - and they were playing the old pop song "these boots are made for walking" just after the news, which was pretty distinctive.

I also noted, from my location at least, that the higher frequencies were much better. The path to Torfhaus (677km) lasted for hours at RDS strength from 18:30UTC to at least 2100UTC on 103.5 - and Antenna Niedersachsen on 106.3 from Torfhaus was noise free mono at 2200UTC when I shut down.

The other thing was - as the signal strengh weren't too high I was able to make good use of the RTL-SDR dongle as narrowing the bandwidth to 60kHZ sure helps pull out a weak signal next to a stronger one.

Rgds

David

Fantastic stuff David.

I know how useful those narrow IF bandwidths can be. Narrowing the IF down to less than 60kHz, even using AM, can be of great use at times. It's something I should play around with a bit more as it becomes possible to dig weak stations out from underneath co-channel stronger ones, depending on the width of the signals.

I am wondering if it is time to invest in an SDR myself again. I have been looking at the Elad and wonder if there is now a good reason for buying one. Something to look forward to at Christmas perhaps)if I sell some other equipment to fund one first ;O)

I just checked the band FM and there don't appear to be any tropo remnants.

Currently struggling to upload videos. I exceeded my daily Vimeo limit in no time and YouTube are muting copyrighted material. Oh what fun! I might have to just record the audio alone and send it to Box.

Cheers

John

** Personal Skegness 'First'

This was one of the most bizarre tropos I have known, as the videos should demonstrate. Instead of signals being stable, as you would expect with tropo ducting, they were up and down like yo-yos. A signal might have faded in from nothing, gone up to RDS levels, then back down into the noise in less than half a minute. Brocken and Torfhaus provided the most consistent signal strengths, but even they were subject to this choppiness.

I logged most of the German transmitters I received in this opening to give a complete picture of what happened, but I missed out some NRW transmitters which were also coming in at enhanced levels, such as Langenberg, Aachen, Teutoburger Wald, Bonn & Munster. Other regular continentals from northern France, Belgium and Holland were also up to 40dB most of the time, yet again suffering this strange fluttery effect.

Since my daily Vimeo upload is ten files and I have many more than that, I have uploaded my videos of the pick of today's DX to my YouTube channel at https://www.youtube.com/channel/UCOrAbHyPpIflDXo62HWyOiA I know there is at least one video which has had its audio muted. I hope there aren't any more. If you have any problems hearing the audio please let me know.

Good DX!

34724. Band II Tropospheric Loggings for 28 September 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-09-28 20:26:01 UTC
From: Janpeter van Dijk
Topic: 168 Message: 34724

Hi All,

Today saw a continuation of the excellent Band II tropospheric conditions. Until in the early afternoon, when all the good stuff moved away to the east.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Sunday 28 September 2014
Band II Tropospheric Loggings:

audible when Humberside dips down 1038km **
90.5 1121 CZE CRo Hradec Kr?lov?, Trutnov/Cern? hora (KR) Pops and OM,
as web 1091km **
89.2 1135 AUT Hitradio ?3, Graz 1/Sch?ckl (ste) A203. Interesting
props. Scatter like signal for two minutes. Seemingly not MS or Es.
Scatter assisted tropo? Rx tuned by Nick Gilly at the time 1261km **

** Personal Skegness 'First'

It's been another of those "Pinch me - did that really just happen?"
days. I was lucky to catch some superb ducting to the Czech republic,
Austria and Poland - a first timer here. What the reception lacked in
signal strength was more than made up for by the reception distances.
CRo Ostrava from Valassk? Mezir?c? on 99.0 became the second furthest
band 2 tropo catch I have had since living in Skegness.

Videos are available at: https://www.youtube.com/user/g1vvp As I
mentioned yesterday, YouTube may have blocked some of the audio from
these videos due to their 'copyright claims' policies. I can re-upload
elsewhere if necessary.

I was just too late to catch a nice ID from CRo Ostrava on 99.0, hitting the record button too late, but there is plenty of audio in that video. Hopefully everything is clear enough. Ii included web audio with the weaker signals. PR3 from Wroclaw on 100.2 had a painfully weak signal. If you can hear this against the recording of the web stream then you'll have no problems with any of the other recordings.

Good DX!

John Faulkner

Excellent stunning reception and video's John I watched them all only one was muted.

Anyway well done

Andy

Thanks Andy.

Yes, good old YT letting us down again. I see they have removed the muting on all my other videos. I just thought they had taken the trouble to watch some of them and realise I was not pirating pop music. Oh well, it's only one video this time.

I suspect it will be a long time before these kind of conditions grace the bands again.

Needless to say, the tropo building has been demolished. A weak Brocken was the last to leave this afternoon.

Good DX!

John

Congrats Dave for your amazing CZ dx,

before digital a guy in Dover used to log TV Nova on UHF 48, but UHF ducts easier than band 2

Excellent Dave. Glad you caught this.

Holland was a pest at times here. I had to do a bit of careful slanting of the 9.2 to remove UK and Dutch signals.

What Austrians did you receive?

John

On 28/09/2014 14:06, davebunyan@dsl.pipex.com [SkywavesDX] wrote:

Hi John,

I managed to pick up Czech republic by checking which frequencies you logged that were clear here (not many!) and on 102.00 by careful listening I eventually got reception of CRo2 for a brief period when some very distinctive music was being played. It was the only long-haul DX for me.

Saturdays' reception was interesting insofar as the "local" DX from Holland/Belgium was very strong, but the usual German station in the range of 390-480km were only just noise free in mono and then there were a good number of German stations in the range 630-690 km - so a very clear case of tropo ducting. Plus, earlier in the day some stations over 900 km including on from Austria.

Certainly some good DX

Rgds

David

I am sitting here wowing over your logs and reports and although I have been MW DXing and SWLing for grumble mumble years I have yet to copy any FM broadcast DX.

Can some kind soul please point me to some getting started type info? I realize a beam antenna and a good tuner are a normal starting point but is there any hope for somebody with a couple portable radios with built-in aerials like there is for MW? I have no idea what times of day, what seasons, what techniques etc. work for FM DXing. I have found a lot of FM DX logs on the net and some neat setups but have not found any decent "How To" info for this aspect of our wonderful hobby.

Thank you for any good advice, pointers, links etc.

you can get dx on these especially during good condx or while hilltopping

if you're computer savvy you can go the hi-tech way with a cheap
dongle + sdr software
http://www.ebay.co.uk/itm/MINI-FM-DAB-DVB-T-SDR-Dongle-STICK-RTL2832U-R820T-Antenna-for-LINUX-WIN7-VANTECH-/301094652364?pt=UK_Computing_Video_Capture_TV_Tuner_Cards&hash=item461aa3c9cc

I have a few Tecsuns. The 310ET seems especially hot on FM for such a tiny
radio. Again my question is about techniques and lore rather than equipment.

Thanks for your links though, I'm thinking about getting an SDR dongle but
I'll still have an antenna problem.

Amazing that it works so well for you, Tim, don't know how you do it - you go down a valley surrounded by trees and hear a 40W tx from 200km away, 50W from twice as far, and others! Thanks also for the link - I hadn't realised they have such a strong Chinese following. The most accessible link I can find is The Rose And Crown :c)

ha! I should probably update the link on fmlist - i added it in 2011

it really is a great spot for the south west, a nice gap in just the
right direction, its better than the roaches IMO

The maps link is correct. You see the driveway to the car park on the right which takes you to higher up to the rear of the building and where some of the DX can be heard. Even on the main road at the front of the pub you can hear some interesting DX from the south-west of England and Wales. The secret to the success of this location is partly due to the take-off in the south-westerly direction, but also because the other hills block of reduce many of the transmitters local to that area.

I don't know who owns this pub now but it always had a good foodie reputation and has even served one or two well kept (popular, i.e. non micro-brewery) real ales in the past.

I miss the Peak District.

John

You are right about there not being much in the way of "how to" articles on our hobby. I think we could do with a few written pieces on the subject.

As for portables and car radios, there is no reason why these cannot be put to good use at a home location. You will need a suitable power supply for the car radio of course. There are some very capable and inexpensive car radios which will do a very good job. Just treat them as if they were any other decent hi-fi tuner.

Some of those Tecsuns and Degens are hot DX machines too.

I will think about writing some kind of article/s about getting started, but don't let that put anybody else off writing something. I am not the best author. Different accounts and perspectives from other DXers will be very useful.

I'm an American living overseas in the eastern mediterranean now. DXing is a lot different than back home. A lot of what I hear is Arabic and I unless I can find a live feed although that is increasingly common, it's hard to ID. I'm not really interested in those stations or their content anyway. I hope to catch some Europeans and Russians on FM since I have logged a few on MW and LW recently.

Because of my schedule most of my listening is in the early evening and sometimes later. That is bad for MW and SWLing but I was hoping FM might be better during the day.

Thanks.

Hi microcode. If you are on the coast then you already have a big advantage over DXers in NW Europe as the tropo in the summer in the Eastern Med is very intense. I know a couple of DXers on this group have done DXing from Cyprus using basic equipment with excellent results. I would guess that conditions there would be best in the evenings and early mornings before the weather gets too hot.

Certainly other parts of Europe and Russia will be easily possible in the summer time Sporadic E season between May and August, with a peak in June & July.

Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

I'd just like to agree with Nick,
you should have no trouble logging dx on a portable in the east med

checkout my cyprus bandscan at fmlist.info i only used portable rx's

Well for one thing I think a good intro would best avoid getting bogged down in equipment. That's the first thing everybody seems to want to talk about because many people have bought and built very nice stations but there's really no end to the choices and antenna discussions alone will take many lifetimes.

Really what the beginner needs to know is about the propagation modes for FM, what times of day and times of year are best for DX and what other environmental/weather conditions affect success, what to listen for, what to expect to hear, how to ID stations, how to get QSLs (if broadcasters are even sending them anymore since I've been away so long). And maybe if you compare FM DXing to other more common forms of DXing like MW or SWL you can better explain how FM is different or similar to various aspects of those bands and present the knowledge from the angle of saying what will and won't be familiar.

With your success and knowledge I would think you would be a great one to write down your knowledge. If you need editing or proofreading I would be glad to help.

Hi Nick,

It's actually terribly hot and humid here most of the time so before it gets too hot is relative! Is FM DXing viable at night or is it during the daylight and twilight hours only? I have strong locals on most of the band around the clock and am not sure what to do about it. At this point a beam or any serious antenna is out of the question.

I was hoping the Russians and Asians might be using the low band segment. One of my little portables covers 64 MHz and up and the other one works from 75 MHz I believe.

> Certainly other parts of Europe and Russia will be easily possible in the

> & July.

That is very good news since the summers are not very nice here. At least I'll have something to look forward to now and with this new aspect of the hobby I'll have something to do in both seasons hopefully.

Thanks a lot for the help.

you mentioned equipment! :D
thats the only reason i replied with a list of rx's

as you've surely noticed if you live in the East Med, condx improve
in the evening and are often worse at midday

a good first step is to make a bandscan of your normal reception so
you'll recognise when something odd appears

you have an excellent rx and a great location, i don't know what more
we can tell you other than just have a go :-)

Thanks, I'm very close to Cyprus. The conditions should be similar.

A major problem for me is strong locals on virtually the whole band from
around 87 MHz clear to the end. If there is any action on the low segment
64/76 and up there may be some hope.

Good advice, thanks very much. This is something I wouldn't have thought of
because in SWLing so much comes and goes and the bands are so vast. In MW
for some reason I feel more that I have a clue where to look. On FM not so.

> you have an excellent rx and a great location, i don't know what more

Hi microcode, it's simple to get started - just buy a good FM protable in July and take it to the park or somewhere with an open aspect, to try it out. That did it for me in 1972, the band was full of Czechoslovakian tx!

Here, on the SkywavesDX web page 'search conversations' for "getting started" and some helpful ideas will come up, starting with message # 33289. I will add that a simple dipole for the band is an enormous asset; used horizontal it has deep nulls off the ends which can reveal real dx beneath many strong and weaker tx. Get it up reasonably high, even a wooden batten will do, and rotate it by hand - so simple and so much quicker than any expensive rotator.

In your part of the world you could really achieve a lot by logging tx well out of range of most members, and I do hope you can also try out the OIRT Band 66 - 74MHz by next season. I look forward to your reports

- Julian, near Manchester

"microcode" wrote:
Can some kind soul please point me to some getting started type info? I realize a beam antenna and a good tuner are a normal starting point but is there any hope for somebody with a couple portable radios with built-in aerials like there is for MW? I have no idea what times of day, what seasons, what techniques etc. work for FM DXing. I have found a lot of FM DX logs on the net and some neat setups but have not found any decent "How To" info for this aspect of our wonderful hobby.

ah in that case forget about the budget SDR route- the cheap front end
won't cope with the local txs

you will definitely get Sporadic E skip to Ukraine & Russia on the
66-74mhz range
sadly the season for E skip has just finished (may-august)

good luck

That is ok, I hate heat more than boredom and anyway I'm looking forward to winter MW DXing. I've been away from the hobby for a long time and just got two Tecuns within the last couple of months and have been very happy with what I was able to log on MW from here. I've found stations from Romania, Russia and Ukraine perfectly readable in the late evening hours.

I have found that if you are unable to log a station from where you are living you can always move halfway across the world ;-) Do that a time or two and you can probably log everything.

Thanks for the help guys. This is a great group of helpful, knowledgeable and friendly guys!

Hi Julian,

Thanks for the advice on looking over old posts. I don't have a yahoo id and tend to forget many groups are public and you can indeed see the old posts.

I realize a beam or some kind of directional antenna would be a huge help but at this point I can't swing it, pun intended.

I will be very excited to hear something on the OIRT segment of the band. Until this point it's been perfectly dead whenever I've had the radio on. I wish I could scan that section only, but I can't.

It's been another of those "Pinch me - did that really just happen?"
days. I was lucky to catch some superb ducting to the Czech
republic, Austria and Poland - a first timer here. What the
reception lacked in signal strength was more than made up for by the
reception distances. CRo Ostrava from Valasské Mezirící on 99.0
became the second furthest band 2 tropo catch I have had since
living in Skegness.

Videos are available at: https://www.youtube.com/user/g1vvp As I mentioned yesterday,
YouTube may have blocked some of the audio from these videos due to their 'copyright
claims' policies. I can re-upload elsewhere if necessary.

I was just too late to catch a nice ID from CRo Ostrava on 99.0,
hitting the record button too late, but there is plenty of audio in
that video. Hopefully everything is clear enough. Ii included web
audio with the weaker signals. PR3 from Wroclaw on 100.2 had a
painfully weak signal. If you can hear this against the recording of
the web stream then you'll have no problems with any of the other
recordings.

Good DX!

Hi Ruud.

I included 90.6 as I thought I could hear a Slavic language, perhaps Polish(?) but it is too weak and very brief - at the very beginning of the clip before the web stream comes in.

Czestochowa is a possibility at 60kW. Transmitters in the Czech Republic and Slovakia would be too low power for weak propagation like this.

John

i can't hear the station at the start but towards the end it does
sound like Polish adverts towards the end of the clip, after you flip
back from the Polish advert on the webstream

did you mute the stream or turn it down, i want to make sure i didn't
get fooled!

The audio on the XDR was muted.

I meant the audio from the Polish webpage,
trying to decide if i heard Polish adverts on your tuner or if its the
PL webpage

THIRD attempt to post. My first two bounced! I am on the Yahoo Group page this time. Grrrr!

Sorry Tim.

Yes, I always use mute on the web streams as it completely kills the audio. I think I have found out what the station is. Still awaiting confirmation. Check my YouTube page. John

Well I am getting a bit fed up with this. Yahoo won't even let me reply on the group page.

Tim .....

Take a look at the YouTube video again. I re-named it. Konrad DX in Poland also heard the same, confirming the identity of the station. Now I know what I am listening for I hear it myself too! All explained in the notes to the video (which you'll have to expand).

It's 1291 km!

Good DX!

John

Hi John,

Congratulation on all your incredible DX. While receiving PR 2 on 90.6 MHz, you may have forgotten to check for 87.5 MHz. From the same site on a completely clear frequency. Well, you have something left for next time.

73, Janpeter

Thanks Janpeter.

I checked 87.5 quite often but heard nothing. I have checked different frequencies from the same site across the band regularly and noticed wildly differing signal levels. Salzburg was another example of this where 104.6 was the easiest frequency to receive and almost noise free at times, but 99.0 was always very weak and down in the noise. 94.8 was not much better. The 9.2 _is_ performing uniformely across the band too. If you remember, this aspect of the antenna was checked with Ofcom test equipment when they visited me last year too and they were very impressed by this smoothness, not to mention being very surprised by this.

I will look for 87.5 next time - whenever that will be? The chances of that happening this Friday are slipping away with each forecast update.

Cheers

John

I hope so. These things don't just happen unfortunately. If the duct is there then we have a chance. It's taken me four years to hear Poland remember. I won't hear a thing if the path isn't open. That's the same for all of us.

It does show you the possibilities. Parts of Hungary, Slovakia and Slovenia were slightly closer that the Valasske Mezirici transmitter. Italy even closer. Don't forget I also had a 1593 km duct into north-west Poland when I lived in Sutton-in-Ashfield. On amateur radio I worked Lithuania on 2m from the Axe Edge which adds another 200-300 km (I lost the blog article would you believe) and a ham in Latvia reported hearing me at the time too! UK 2m hams have worked into Russia before now too. Look at your own duct to the Canaries from the Lleyn Peninsula. If the duct is there and that frequency is empty you are on to a winner. You only need to be in the right place at the right time.

Don't forget your North-EAST Polish catch from Sutton R Maria Suwalki 107.9

IIRC from Home, my best FM tropo is 1384km Sweden on some freq i now
forget 87.6 maybe

band 3 is an entirely different matter I've had pictures from Finland,
audio from Iceland and video carriers from Belarus

Mazurian Lakes region is very helpful to our tropo reception of
Suwalki & Belarus IMO

whats happening now guys? weather is beautiful barometer is 1020

which way should i point?

On an esoteric philosophical note (blame it on the sci fi books I read!) - if there is no one there to listen to the signal - is it really there?

And on a serious note - Friday looks promising, but the Hepburn forecast is not as good for Friday as it was 24 hours ago. I can however see the possibility of getting Spain in the morning and Scandanavia in the afternoon.

Are you a Trekkie or a Trekker David? I think I am a Trekkie, being a fan of the 60s Star Treak series more so than anything else 'Star Trek' which came out after that. I do not speak Klingon either. There are limits to my geekiness. I don't do "logic" too well either, not being a Vulcan. I am just an ordinary DXer and I cannot stand Dr Who!

I can understand the logic of the signal not being there just because nobody is listening to it. It makes more sense to me than people who log stations which aren't actually there. We all make mistakes though.

I see they have upgraded the forecast on Friday, after downgrading it yesterday. Wednesday and Thursday don't look too bad either for shorter range stuff.

Once this cold and wet snap has gone through this weekend I have heard that October is going to be a very settled month, weather-wise. Let's hope so.

Hi John, I avidly followed the original Star Trek series and was really disappointed when they discontinued the series about Earth's first starship -but wouldn't describe myself as a "Trekkie". My tastes run to the classic sci fi of "EE Doc Smith", Heinlein, Anne McCaffery and the like.

Hopefully I'll be up to monitoring Friday's potential opening properly, at present sitting down for a long time isn't a good idea - so I'll be relying on analysing the RDSLogs from the two ST311's to some extent.

I ahd one 'oddity' with tropo reception today - EDR3 from Langenberg on 95.1 was coming in at RDS levels nearly all morning but all the other frequencies were well down in strength in comparison. And it just happens that every single frequency from Langenberg happens to be clear of UK stations (or very low strength).

I have got sidetracked with this, doing ten things at once as usual, but I keep dipping into this. I am hearing some half-decent signals from a few of the regular continentals.

Signals inland are also creeping up, particularly to the south and west of England, so I maybe the continental path will open up that way too.

Good DX!

Well, more like a 1-bedroom flat as it's only a few indicators that are up a bit like Swingate, Tacolnestonand a bit of Essex. Wrotham also a bit above normal. This lift looks like it will peak tomorrow ahead of the cold front coming down from the NW.

I have now got a Kenwood L-1000T tuner which I will write a full report on in due course once I've had some more time to play with it. Good DX.

Nick, Whitchurch, Hampshire.

Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

A nice opening to Ireland not the strongest of openings but due to the vertical FM 3 it works much better than the vertical dipole and so it should which I use as a benchmark now.Kippure was here but still down on MT Leinster so it must still on low power working due to TX maintenance.

34782. Kenwood L-1000T FM tuner

Yahoo group: SkywavesDX (2014)

From: nick gilly
Topic: 34782 Message: 34782
Attachments: 1 described; binary payloads are missing from this source WARC

Hi all.

I saw one of these on eBay last week with a starting price of 99p and free shipping (despite weighing about 10 kg) so I put it in my watch list and kept an eye on it. It had some holes drilled on the top panel for ventilation purposes as apparently these tuners run hot due to a big toroidal transformer inside. It included the manual (tatty) and the all-important remote, which is needed to access most of the functions on this device. Apparently the seller had inherited it from a friend who had died recently who had bought it second-hand from a high-end audio emporium. It finished early on a Sunday morning so about 10 minutes before the end of the auction I put in a maximum bid of £101 using Gixen and was lucky enough to be the highest bidder.

It arrived here on Wednesday all intact, apart from the plug which was cracked and split exposing bare wire, so I didn't get it up & running until yesterday evening after obtaining a new plug for it. The tuner is built like a tank, and comes in what I would describe as 'graphite grey'. It has 2 aerial inputs, fixed and variable outputs (I wonder if RDS data would be accessible from one of these?), and multipath outputs for an oscilloscope. As most of the functions are on the remote the tuner is minimalist and industrial-looking with just an on/off button on the left, the central display (in a muted amber colour), and rotary tuning knob on the right with a small button for auto or manual tuning. The remote accesses the other functions such as Ant a?B, IF bandwidths (3, labelled Wide, Normal and Narrow), Mono/Stereo, Direct/Distant (like local/DX modes), presets (20), Active Reception (where the tuner decides on the bandwidth, stereo or mono depending on signal/conditions) tuning up/down and output level for the variable outputs.

So, how does it perform? Very well indeed! The selectivity in Narrow is excellent for a stock tuner, and is in the same league as the Denon TU-800L (and therefore the Onkyo T-9990 and probably similar to the KT-6040). I have noticed that compressed pop stations in Narrow sound rough with some obvious distortion, but sound fine in Wide and Normal. This is probably due to the very good selectivity, although the Denon doesn't sound as rough in Super Narrow. From what I have read, the European version (and UK, judging from the performance) has 8 ceramic filters, but I don't know the configuration used for Narrow. If all 8 are in line then this may explain the increased distortion. The L-1000T also tunes in 25 kHz steps, unlike the Denon's 50 kHz so it probably has a slight edge over the Denon for this reason. The steps increase to 50 kHz when Auto tuning or when the tuning up/down arrows are held down. The result of this is that it scans up and down the band more slowly than my other tuners. An interesting feature is that when the bandwidth is changed or the tuner stops tuning a relay clicks, which is something I've not come across before. I think that apart from the Sony XDR-F1HD this Kenwood is probably the best stock tuner I have used for DXing. It really is very good for these purposes.

Sound quality in Wide on a good broadcast is excellent with a clean, relaxed sound and good stereo imaging. The bass seems to be better than average too. I did notice whilst listening to Radio 2 earlier this evening in Wide some slight grainy harshness to vocals on some records that wasn't present on the AAC internet stream. However, there was no such

distortion on Radios 3 and 4 so I can only assume that it was at the BBC’s end, not mine. It could be that this tuner is more revealing of source material and is not as forgiving with sloppy broadcasts.

So this was definitely a lucky find at £101 as I have seen these go for several hundred Euros on eBay Germany. Perhaps some were put off by the holes in the top cabinet, but I took a chance, and it was definitely worth it! I suspect with hand-picked filters it would be even better. Good DX.

Nick, Whitchurch, Hampshire.

Kenwood L-1000T, Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, Triax FM5 horizontal beaming east.

34783. Correction: Skegness Log: 28-09-14

Yahoo group: SkywavesDX (2014)
Date: 2014-10-04 08:24:20 UTC
From: John Faulkner, Skegness
Topic: 34783 Message: 34783

Thanks to Konrad DX in Poland. A correction was issued, explaining that there was some confusion over my 90.6 recording, which contained extremely weak audio. A simple mistake, and one I might easily have done myself, was that there was some assumption, because of the PR2 logo which appeared in my video, that this was PR2 I received. PR2 is a classical music station, so my recording was not that at all. My recording still has the same audio as that of the web stream, but the web stream was in fact that of PR4. So ignore that PR2 "Dwojka" logo on the video which caused the initial confusion. I was also unaware of this.

Konrad checked with a friend who works for Polish Radio and identified the advert as one which was indeed broadcast by PR4. PR2 was broadcasting details of an upcoming sonata at that time.

So my logging is now confirmed as ...

* 90.6 0904 POL PR 4, Swierad?w-Zdr?j/G. St?g Izerski (DS) Adverts, as web stream. Thanks Konrad DX, Poland for help. 1053km ***

Swierad?w-Zdr?j is slightly closer at 1053 km, but this transmitter has a power of only 1kW. After looking at the geography around Swierad?w-Zdr?j, I see mountains and a clear take-off in this direction, which would have no doubt helped the signal along.

I give a very _*BIG*_ thank you to Konrad and his friend for their diligent work on this recording which obviously must have taken some time.

Regards.

John

I heard that on REE but I thought I read somewhere they are reconsidering it? So many stations going off the air it's hard to keep track :-(

They used to have beautiful QSL cards.

Well, logged them one last time.

The general feeling among Skywaves moderators is that Yahoo Nova is not fit for purpose and we need a new platform, so we are pleased to announce that a new Skywaves 'Bulletin Board' Forum is online and ready for your posts:
http://skywavesdx.org/ http://skywavesdx.org/
This allows us to have several Skywaves groups under one roof, managed by the same team of owners and moderators. The new forum is hosted on its own webspace and there are no adverts. It is fully searchable. All members' email addresses are hidden and there is no need to worry about spam.
You must visit the site to post but you can choose to receive email notifications of replies and new posts. We hope that most members will be willing to try out the BB Forum, but the Yahoo! Groups forums will continue to operate and you can choose to post on one or both forums. There is a forum where you can ask questions and post comments and suggestions. The BB Forum will evolve and adapt to membership needs.
My thanks go especially to the original Skywaves founder John Faulkner for his time and effort in building the new forum, and to Lynton Towler for technical assistance. Thanks also to the other members who have been testing it over the last few weeks.
From the joint-owners,
Julian Hardstone and Günter Lorenz

34797. RE: [SkywavesDX] New Skywaves Forum

Yahoo group: SkywavesDX (2014)

From: Jim Smith G0OFE
Topic: 34796 Message: 34797

Echoing Julian’s words about the effort John has put into getting this set up over the past 2 weeks or so. Should be a big improvement over the Yahoo interface.

Jim.

Unfortunately not. apart from anything else, there'd be no easy way of knowing which part of the forum the post should go!

One little tip for those who like to see the posts in chronological order regardless of sub-forum as per this group, you can view all posts by clicking on "View Active topics", which gives you the view here:

http://skywavesdx.org/search.php?search_id=active_topics

34800. Re: [SkywavesDX] New Skywaves Forum

Yahoo group: SkywavesDX (2014)
Date: 2014-10-06 17:14:10 UTC
From: John Faulkner, Skegness
Topic: 34796 Message: 34800

There are modifications for transferring Yahoo messages to phpBB but none of them are 100% successful. Yahoo and phpBB are very different platforms.

What would be useful would be members might like to re-post any important topics from the Yahoo group in the new board for future reference.

We can perform any number of mods on the new forum but board updates will probably override them and we don't want to create large amounts of extra work. Board security can also be put at risk with mods, so another thing to consider.

John

I also echo what Julian has said regarding John and Lynton hard work in getting this new forum up and running.
I have been testing over the past few weeks and have found it much better as there are different categories for different bands which does to me make things easier.

Since the group is already split into mw and fm etc I think you could get
pretty close.

Another nice to have feature would be a way to upload sound files. We
wouldn't necessarily need to archive things forever, for example it would be
nice to have a way to upload UNID sound clips until identified, etc.

One of the problems with forums is always the fact various content is hosted
in different places and it's nice to be able to wrap them together when possible.

Anyway thanks again to everyone. I signed up already.

In an ideal world, yes.

However, hosting sound clips would likely heavily impact on the loading/bandwidth use of the server main git more expensive to run.

Better to put them on the various outside portals and link to them.

Jim.

34809. Re: [SkywavesDX] New Skywaves Forum

Yahoo group: SkywavesDX (2014)
Date: 2014-10-06 18:48:00 UTC
From: John Faulkner, Skegness
Topic: 34796 Message: 34809

The phpBB platform is very versatile. There are so many things you can do which you wouldn't ever get a chance of trying with Yahoo, but then this is a simple email list and little more.

That said, no system is perfect for all needs, but phpBB should open up a whole new world of possibilities. It's quite intuitive too, plus there are those FAQs (top right of the main Board Index page) if you need any help. As Julian said, just post a question or write if there is anything else you would like to ask.

No public emails are visible on the new forum, unlike here where they ARE visible, despite all options to hide them being 'checked'.

Yes, mailing lists when done right are better than forums all things considered. But an ok forum is better than a bad mailing list (listening, yahoo?) so hopefully this works out. I don't like to be signed on around the clock to a dozen forums either. I agree with your sentiments.

I would prefer everything to be on mailing lists or usenet but then I'm surely out of style.

Agreed, phpBB is one of the better ones and it's pretty widely used. I was considering setting it up myself for another interest but I can't stand the noise and heat from any of my servers to be running all the time. Glad somebody else can! And I hope they are doing just that and did not have to pay for colo, virtual server, etc.

> That said, no system is perfect for all needs, but phpBB should open up a

PHP vulnerabilities, SQL injection and cgi bash shell attacks? ;-)
I hope they're running it in a VM.

There is a lot to be said in having an interested party running the site as opposed to what we had until now.

Many thanks, guys.

34816. HD Radio in Oslo

Yahoo group: SkywavesDX (2014)
Date: 2014-10-06 19:49:00 UTC
From: Günter Lorenz
Topic: 34816 Message: 34816

http://radiomagonline.com/digital_radio/ibiquity_norwegian_local_radio_association_test_hd_radio_in_oslo_0918/

A pretty "biased" artice on HD Radio. The author does not even bother to mention something like a frequency (what is this?). The statement "To date, over 25 million receivers have been sold and the technology is factory installed by 35 car manufacturers on over 185 different vehicle models." may be true, but is valid only for North America. I guess you can't buy a vehicle in Europe with HD -why should somebody pay for the license? Plenty of hot air, about a country which is at least as biased towards DAB.

Anyone from Oslo here to tell us a different perspective?

I assume it is 106.8 MHz, with 100 W ERP for the FM signal (0.121 kW per FMLIST). The ERP of the digital signal is usually only 1/100 of the FM signal, although higher percentages are now in use in the US.
From: http://en.wikipedia.org/wiki/HD_Radio#Bandwidth_and_power "The ratio of power of the analog signal to the digital signal is standardized at 100:1 (−20 dBc), making the digital signal 1% of the analog carrier power."

73,
Günter

I also agree 100% with J?rgen.

I am posting only very rarely on this mailinglist, but I am (correction: I was) reading some posts if the title sounded interesting for me. This just because I got all emails from the list automatically and I am looking always at all titles of incoming emails if there is something interesting for me. This is not very time consuming.

But to follow an forum on the world wide web IS very time consuming for my work-flow (by the way, Facebook would be even worse) and it needs to go actively there (e-mail arrives even if you don't think about it).

I can not spend so much time, so I will not (or extremely rarely) be there and so I will be missing also some probably very interesting things.

Thanks, J?rgen, for pointing at the hard-core-dx fm mailing list. Maybe in future I will subscribe that one?

So, I wish all of you to enjoy the new forum, to have good dx catches and I also say now "Good Bye".

You can receive email notifications on chosen topics or entire forums / sub-forums within the new phpBB forum. One click does all, so no need to refresh the page. You subscribe to the subjects which interest you and can ignore the others if that's what you desire.

You can opt to "View unanswered posts", "View active topics", "View unread posts", "View new posts" or "View your posts". Roughly the same number of clicks and far more versatile.

John

34824. Ireland: Dungarvan/Carronadavderg site

Yahoo group: SkywavesDX (2014)
Date: 2014-10-07 08:21:53 UTC
From: Günter Lorenz
Topic: 34824 Message: 34824

We have two sites in FMLIST with this name:

Dungarvan/Carronadavderg WD 255 07w44/52n04 -7.4404 52.0414 --> this has all FM frequencies assigned
http://maps.google.com/maps?output=classic&ll=52.070556,-7.734444&spn=0.03805,0.06727&t=m&hl=en

Dungarvan/Carronadavderg 2 WD 255 07w44/52n04 -7.4337 52.0351 --> no frequencies assigned.
http://maps.google.com/maps?output=classic&ll=52.064375,-7.727078&spn=0.03805,0.06727&t=m&hl=en

There is a notification regarding RTÉ 2 on 90.7, saying "07w44/52n03 correct coordinates"

Is anyone familiar with that area? Where is this site actually located? Google Maps satellite is not high-resolution, but the Streetview car was there.
It is not a minor site, ERPs are from 1 to 6 kW.

73,
Günter

34825. Ireland: KFM Kildare site

Yahoo group: SkywavesDX (2014)
Date: 2014-10-07 08:28:09 UTC
From: Günter Lorenz
Topic: 34825 Message: 34825

We do not have an exact site location for 97.3 MHz KFM Kildare in FMLIST.
Our best guess is Kildare KE 06w53/53n10 -6.5300 53.1000

A notification suggests that "kildare may actually be rossmore in co. laois south west,west of town of carlow"
Can anyone provide details about the exact location of the site?

73,
Günter

I'm with the guys who much prefer email to forums and other formats of groups. But unlike most of you guys I'm new here and beggars can't be choosers so I will give the forums a go and hope for the best.

If anyone would have taken a poll I would have come out strongly for one mailing list since I feel part of the overall problem is too many places to share info. Since they only announced the forums after they were already worked out I'm willing to give it a serious try, despite my experience with various electronic forms of forums, mailing lists etc. back to before the internet even existed. I would say my preference would be usenet and/or a good mailing list, and then web-based anything a very distant choice after that.

Please see more comments within Dennis' email below:

On Mon, Oct 06, 2014 at 09:18:39PM +0100, Dennis Smith m1dlguk@... [SkywavesDX] wrote:

> interests

I think that is the right direction. Although people are very specialized and might not be interested in many posts it's worse to have to subscribe and deal with hundreds of mailing lists and it goes without saying it's far worse having to deal with 10 forums than 1,000 mailing lists. I would really prefer many fewer, more inclusive mailing lists/groups than a multitude of specific mailing lists/groups. You can always set up a good email client to delete stuff you don't want to read, or simply ignore it yourself. That is less risky than having to find lists with hair-splitting on-topic rules.

> - ScangroupUK, originally founded on the break up of a scanning
> group. Anyone from here is welcome to join.

Thanks but I don't think yahoo is the answer. A simple, text-based (not HTML!) mailing list is so much more useful and manageable. I'm sure if the guys wanted they could find somebody to host the list(s) for free. Jurgen pointed to a gnu-mailman list manager on hardcore dx. I don't know whether that is his list but that would be one place to look. There are others.

> I will miss the group if closed and I wont go to a web forum to real the

I didn't want to be a naysayer but that is my concern also. Still, skywaves looks like such a cordial and active group that I hope it would be the exception.

I wouldn't recommend gmail but I agree that any good email client should be able to thread and offer many advantages over forums especially in timeliness of getting information in and out and in terms of organizing it to your personal preference.

Just one thing to add. Any decisions to move from Yahoo to the BB format were not taken lightly. MANY people were complaining about Yahoo and have been all year.

Skywaves looked at moving to a BB years ago but it was felt that it would not be in the group's best interest. Yahoo worked back then. Obviously it still works well for some people now, but they are in a majority.

Perhaps some of those 'naysayers' will give the BB a chance so they can enjoy the many benefits and advantages it offers. I have never seen such a level of rejection. Fine if you know about BBs, but if not why not give it a try? You might be pleasantly surprised.

I'll say one more time. No need to fix something if it isn't broken, but when something like the Yahoo group has caused so many problems for so many, you have to start weighing up the odds and make a decision. Do you stay with a sinking ship and drown? Or do you get out and save yourself? Yahoo is going downhill and I would be very surprised if the groups are still in existence in their present format, if at all, in the future.

Damned if you do and damned if you don't. That's life I guess.

J

Hello

I live in County Waterford here are the site details as I know them.
I've included the Ordnance Survey of Ireland links to each site.
The sites are marked with a red cross.

Ballintaylor Upper http://maps.osi.ie/publicviewer/#V1,618189,590760,6,0
N52° 03' 23.06"
W007° 43' 32.35
This an RTE site Radio and TV

Carrondavderg http://maps.osi.ie/publicviewer/#V1,617363,587105,6,0
N52° 01' 26.85"
W007° 44' 37.39
This is a multi user site and probably includes Today FM and Newstalk.

Faha http://maps.osi.ie/publicviewer/#V1,625752,587856,6,0
N52° 02' 31.70"
W007° 37' 29.90"
This WLR FM 95.1 MHz

Hope this helps

JJ

Gunter

I used to visit Dungarvan a lot about 10 years ago. You can see the mast from the town. Its on the side of a hill north of the town. Not ontop of the mountains. Nearest main road is the N72. Ordnance Survey Ireland | Home http://www.osi.ie Might be worth looking at Ordinance Survey of Ireland to see if its marked. The TX is low power and serves the town and the valley towards Lismore.

http://www.osi.ie

Ordnance Survey Ireland | Home http://www.osi.ie Ireland's National Mapping Agency. Explore Ireland Maps and Aerial Images using our FREE online viewer.

View on www.osi.ie http://www.osi.ie
Preview by Yahoo

I used to notice that everyone watched BBC TV from Wales on small aerials, and I used to think, thought how do they get such good reception? That was until I realised that Dungarven was used to recieve BBC TV from Wales and rebroadcast it locally.

This is not a reaction to one or two complaints with Yahoo. It has been
a long-standing problem. I would have much preferred to leave things as
they were, i.e. had Yahoo not become so problematical for so many. I am
not a dictator and have listened to a lot of views over a period of
time. I don't own Skywaves anymore I gave it to that crook Twittman in
London in 2009 because I had lost all time and inclination to deal with
the running of the group and it was not fair on other's to suffer the
fallout of all the stress I was going through at the time. We all make
mistakes. Thankfully Julian came to the rescue and the groups have been
managed faultlessly by Julian thereafter. It can be a full-time job
managing things like this and there was too much happening for one
person to deal with.

It wasn't you I was replying to there. It amazed me how quick some people are to jump on the "Oh let's start a new group. This one is no good." bandwagon. I had half expected this. I fully accept IT HAPPENS! That is life. I don't know of any SUCCESSFUL group (like Skywaves) which hasn't had this kind of problem. Fall-outs occur. It is human. But it is the way people do these things which can be the big surprise. I watch from a distance while those people show themselves to be what they are. i.e. not worth bothering with. Let them go! Their loss.

34836. Farewell and best wishes to all!

Yahoo group: SkywavesDX (2014)
Date: 2014-10-07 13:38:00 UTC
From: John Faulkner, Skegness
Topic: 34836 Message: 34836

Tis a sad day in a way. I will miss some aspects of Yahoo, but times change. Life moves on! /as somebody apparently said at some point./

Well, this really ought to be my last message on this subject. I am not a spokesman for Skywaves and it's wrong for me to keep responding to all the posts on behalf of the group. I don't have all the answers. I am trying to take everything into consideration and strike some kind of balance, but I will make this the last post before leaving this group, at least for a short time while I concentrate on the new one.

Opinions have been expressed, some of them in no uncertain terms! But generally we have had a good discussion on what we like and dislike about two different group systems. It's been interesting to learn how people feel. We know nothing is perfect. We know Yahoo has been a problem for some (a majority) and to varying degrees, but not for others (a minority).

I just had to conclude with this though. I looked at the new forum just now and I am very pleasantly surprised. I had expected the membership take-up to the new group would be slower than it has been. I have been trying to decide what might be a reasonable expectation and guess a few figures. Would we have as many as 50 members by the the end of the week? Perhaps 100 by the end of the month even? To me, that would be considered a very good start. But the way things have progressed it looks like we will have those 50 members by the end of the DAY! That's less than 24 hours after Julian made the initial announcement! We already have 35. /Note that not all members show in the member's list until their first posts are made. It's just the way the new board works due to the auto-moderation queue being effective to prevent potential spam - something which we are well on top of, incidentally. Once a newly registered member's post has been approved they they automatically move to the fully Registered User category and successive posts appear instantly./

Just for the record anyway. So this is hardly a measure of failure? Quite the opposite I think.

Now to delete the spam from my inbox which has come to me via Yahoo.

Looking forward to seeing you all (hopefully as many as possible) in the new group at some point. Please _do_ give it a try at least.

In the meantime, I wish all members of this group the very best and top DX!

John

34837. New Skywaves forum - a point missed?

Yahoo group: SkywavesDX (2014)
Date: 2014-10-07 13:50:54 UTC
From: davebunyan@...
Topic: 34837 Message: 34837

I got on OK with the old version of Yahoo Groups - then Yahoo updated it. I've got used to it now - apart from not having access to e-mail addresses (my fault probably).

BUT - if the people who give up their time to actually run a forum/bulletin board and keep it going - and who are going to be the main users are finding it difficult - and probably getting flak because of problems.... Then those of us who just use it/them should be grateful the moderators are willing to find a solution. That's the point that may be missed - it's a free service.

There is going to be a transition period - It is not hard to have both the old and the new open as separate tabs and nor is it hard to copy/paste a post onto both. Having lost a couple lengthy posts on Yahoo I've composed them in Word and then pasted to the forum.

Also - whilst it is in my mind - fmlist.org - I wouldn't get a tenth of the enjoyment from the hobby without this massive resource - again free of charge. So when it goes down late in the evening and is up and running an hour later - don't forget someone is giving up their time for free - and maybe missing some rare DX.

So to all those who have made it part of their hobby to provide these services - Thanks!

But remember (to misquote) - you can please some of the people all of the time, you can please all of the people some of the time - but you can't please all of the people all of the time.

(Now I must get round to registering..)

Rgds

Thanks for all the points of view, and I fully understand those who wish to continue only with a mailing list or reflector. I too wish that the BB Forum would allow email posts and forwarding; I normally post by email but monitor openings online.

Skywaves has had a web presence since before John discontinued the printed magazine format, and the one big strength that a website offers over a mail reflector is a 'preview' of what you're joining. The Skywaves membership has, from the start, been welcoming and helpful to anyone interested in the topics, and I would like that attitude to remain publically visible so that we can attract new members. Hard-core-dx is the exact opposite, but I know it serves its subscribers well.

Related to this visibility is the archiving of the posts, and this is assured under the new Forum. Reflectors and the usenet do not provide archiving (unless someone collects the posts on a website!). For me the principal failing of Yahoo Nova is the difficulty of retrieval of posts from more than a few days past.

I am, inevitably, subscribed to dozens of Yahoo Groups, and I agree these work happily with email posting and reading, especially for the smaller groups. I am on a few reflectors and I archive a few threads on my local machine, but I've not visited the usenet for years - I see it as antiquated and rather quaint. However I spend time every day on a couple of php forums for my other interests, and am entirely happy with the way they serve their communities. It is my intention that the BB Forum will continue to serve the dx community. Because of its origns, Skywaves has always been slightly British-centered, and I would not like to predict whether that will continue with the new forum, but there is room for regional sub-forums to develop.

For those who have the time and energy, double-posting would be a good way to keep the Skywaves community in touch and I shall try to do this whenever I have any dx news. I would hate to lose touch with any of my Skywaves friends.

- Julian

A few off-topic clarifications within:

On Tue, Oct 07, 2014 at 11:53:34PM +0100, 'Julian Hardstone' julian@... [SkywavesDX] wrote:

> Related to this visibility is the archiving of the posts, and this is assured
> under the new Forum. Reflectors and the usenet do not provide archiving

That is true, but it is easier to set up a news server than a mail server
and you can archive everything you want. If you run your own mail server or
even most mailing list servers you can also archive all you want. The only
issue is when you are depending on other people for hosting.

> not visited the usenet for years - I see it as antiquated and rather
> quaint.

No offense but that perception is simply not accurate. First and foremost,
usenet is a distributed text sharing protocol. Nobody can make usenet go
away. It's designed so there's no single point of failure, no single point
of control, etc. Google can't stop it from working, yahoo can't stop it
from working, nobody can. As long as the net is up, usenet works. That is a
huge advantage over every other system that relies on a central server and
services. Google groups can go away tomorrow and nobody would miss anything
but the spam they generate. It wouldn't stop a usenet group from running
like it always has.

Usenet is truly free in that anyone can host their own news server and peer
with other servers. You don't need anything more than an internet connection
and a PC. You don't have to sign up for anything or depend on anybody but
your ISP.

Many technical communities remain centered around usenet newsgroups.

Subject: [OT] Re: [SkywavesDX] Re: New Skywaves Forum

A few off-topic clarifications within:

> not visited the usenet for years - I see it as antiquated and rather
> quaint.

No offense but that perception is simply not accurate. First and foremost, usenet is a distributed text sharing protocol. Nobody can make usenet go away. It's designed so there's no single point of failure, no single point of control, etc. Google can't stop it from working, yahoo can't stop it from working, nobody can. As long as the net is up, usenet works. That is a huge advantage over every other system that relies on a central server and services. Google groups can go away tomorrow and nobody would miss anything but the spam they generate. It wouldn't stop a usenet group from running like it always has.

Usenet is truly free in that anyone can host their own news server and peer with other servers. You don't need anything more than an internet connection and a PC. You don't have to sign up for anything or depend on anybody but your ISP.

Many technical communities remain centered around usenet newsgroups.

Very strong here S9+ on lowered MA5B beam at 55 degrees – on the Icom 7600 display you can see the 20 kHz spread Jurgen mentions.

Conditions seem very good today – just worked 4W/G3ZEM East Timor who was strong on 21028 cw. 10m is wide open in all directions as well.

Regards

Stuart

Well done Stuart.

This might be the last season when we can enjoy the solar maximum, so best make the most of it while it lasts.
I noticed that 10 metres is wide open. Also the Upstate New York repeater on 29.620 MHz is coming in very strong, today.

73,

Chris.

34870. Irish Parishradio Collection

Yahoo group: SkywavesDX (2014)
Date: 2014-10-11 17:37:45 UTC
From: harriku@...
Topic: 34870 Message: 34870

Hi all,

I have made a web-page of my Irish Parishradio Collection. I have scanned all the paper-letters (and several
e-mails) and other material, which I have from priests and parish secretaries.

http://www.parishradio.harriku.com http://www.parishradio.harriku.com

Parishradio is a 4 Watt CB-transmitter in the chruch and it broadcasts all church-events live on 27 MHz (mainly 27.6 - 27.995 MHz). It is for old and sick local people. This is legal broadcasting in Ireland since 2006,
but F2 gave the first signals in autumn 2011.

I have now identified about 130 churches and have about 50 paper-letters back + emails. I have sent a
CD-recording to them and asked comments if that really is their church. I have not included my e-mail
although with that I'd have more replies a (letter is more beautiful than e-mail).

To start writing a paper-letter these days is "difficult" and takes time from the parish people (mainly priests),
but anyway this is not so good result as what I expected.

These churches are very difficult to identify from the Masses, but possible. Especially for the start 2 years

ago, and later, I had significant help from Paul Logan, who can copy those difficult Irish village-names incredibly well! Thanks to Paul.

F2 is about to start. Let's see how it goes this season.

I think I will scan also my letter-replies from Italian and French FM-stations from 1980-1990-centuries. Most of those stations are now closed and gives memories to many people around.

Long time ago I have done this scanning-job also to my Dutch MW-pirate collection from the end of the 70's.
Those are letters, photos and stickers from Dutch AM-pirates:

34873. Mist over England

Yahoo group: SkywavesDX (2014)
Date: 2014-10-12 08:02:19 UTC
From: julian@...
Topic: 34873 Message: 34873

There's a mist (Trübung :-) over England this morning so I was expecting some nice local tropo, but it's not there.
Propagation from the west and south is reduced, but possibly slightly lifted to the north, with just a hint of Meldrum and Black Hill
I wonder what Tim's been hearing..?
- Julian, Stockport

34874. Aerial overhaul

Yahoo group: SkywavesDX (2014)
Date: 2014-10-12 08:04:08 UTC
From: nick gilly
Topic: 34874 Message: 34874

Hi all.

It's finally happened! After a lot of delay, mainly because we discovered in the summer that we needed a new roof, I have replaced the old Triax FM5 that has been up since May 2006. It was starting to show some changes in directivity during wet weather and also, after the noise problem earlier in the year, I decided that enough was enough and the entire array needed an overhaul. I ordered the aerial, a Körner 9.2 from Antennenland, in April and bought the rotator and accessories, a Yaesu G-450C in June. The last parts to be bought were the Webro coax cable and a 12ft aluminium scaffolding pole, which only arrived on the Thursday afternoon.

So on Friday Skywaves member Jim Smith had very kindly arranged to have a day off to come up here and set up the rotator which was fiddly and required soldering the inner wires of the rotator cable to the correct holes, a little more difficult as the diagram was in black and white. He also assembled the aerial and we had a quick test connected to his Elad FDM-S2 to check it was working as expected, which, thankfully it was. We also went to Maplin to buy an F-connector plug to connect the coax to the 9.2's balun box. We still had the scaffolding up on Friday from the roofers which made it more fiddly to get the cabling in position, although it ultimately proved a Godsend.

The aerial installer came at about 2.15 pm which meant there wasn't as much time to test the aerial and rotator as we would have liked but the aerial was finished off whilst the installer took the FM5 down. When it came to lifting the 9.2 into position, Jim had to help, and this would not have been possible if the roofer's scaffolding and platform wasn't still up, which had been scheduled for removal earlier in the week! The scaffolding came down the next morning,

All was finished by about 4 pm, and since then I have been trying out the band, mostly beaming east or south as these are the most productive directions. Anything past SSW starts to get affected by the railway embankment on the west side of the road opposite the house, and beaming north the background noise level is higher so I haven't really investigated between west and north properly. Certainly beaming south I can get Caen on demand with fluttery variable signals, frequently peaking up in stereo, plus Rennes (seems down on strength compared to the first place at Lynch Hill we had here in 2005), Cherbourg (weaker than in 2005 as it has since changed from horizontal to vertical), Le Mans, Alençon, Les Platons (peaks noise-free mono every so often), Brest and even Parthenay on 87.9. I haven't heard Nantes yet which was a regular at our first place. It seems that some transmitters to the south don't make it in here as well as Lynch Hill. Last night I
heard Chartres on 89.7 beaming SSE..

Pointing east or just south of east there is a noticeable improvement on the FM5 with more consistent signals from the usuals such as Lille and Luxembourg is more often heard on 100.7, as well as Classic 21 on 87.6 from Léglise, although this is weaker than 100.7. Other RTBF sites are also noticeably better e.g. 90.5, 99.1 and 101.8. Directivity is definitely improved over the FM5. With the FM5 beaming east I had a fully-quieting mono signal from BBC Somerset on 95.5 off the back of the beam. The same arrangement on the 9.2

gives a weak and noisy signal which would be a lot easier to displace during tropo. Beaming east I can also find very sharp nulls on Rowridge (which is about 56 dB beaming at them in Narrow according to the Kenwood) where the signal becomes unstable and can even fade into the noise. The take-off to the east and NE seems a little better then Lynch Hill which is borne out by the fact that txes such as Wrotham and the BBC Hemdean relays
are more prominent beaming south than they were at the first house. So overall this is a big improvement on the previous set-up and it will be very interesting to see what I log during lift conditions. The testing period so far has been during very flat conditions.

A BIG BIG thank you to Jim Smith. Without his help this would not have been possible.

Good DX.

Nick, Whitchurch, Hampshire.

From: Brock Whaley
Topic: 34870 Message: 34887

Harri,
Thank you for your excellent site. I appreciate all the work
you have put into it. I am in Holycross, County Limerick, just 3km north of
Bruff. Here are a few observations I made this Sunday morning 12 October. I was
using a FunCubePro+ dongle and indoor dipoles.
There are some FM Broadcast band notes that may be of
interest to FM DXers.
All signals are church services and in narrow band FM unless
noted. All times GMT
27.175 Croom smack dab in CB traffic. 1030. Poor at 8 miles.
27.505 Killmallock is on at 0800 and 1030. Excellent signals
at 7 miles.
27.601 Both Bruff and Buttevant on at 1000. Full quieting
from both. Bruff is just down the road, while Buttevant is 18 miles away.
27.6185 ADARE is on this frequency. 1040. Good signals at 12
miles.
27.755 RAHEEN not on your list. Local mentions. 1015. Weak
signal at 11 miles.
106.1 Unknown service at 0940. Wide band and poor reception.
106.5 An unknown NARROW BAND service at 0900. Full quieting.
At 0930 a WIDE BAND carrier showed up on 106.5. The second station began
services at 0932. This second station is also full quieting and mentions
Limerick. The narrow band signal closed at 0932. Who else but a DXer would have
narrow band detection reception on the FM broadcast band?
Thanks again for your research.
Cheers and 73’s
Brock Whaley

<SkywavesDX@yahoogroups.co.uk> wrote:

Hi all,

I have made a
web-page of my Irish Parishradio Collection. I have scanned all the paper-letters (and
several
e-mails) and other material, which I have from priests and parish secretaries.

http://www.parishradio.harriku.com/

Parishradio is a 4
Watt CB-transmitter in the chruch and it broadcasts all church-events live on 27
MHz (mainly 27.6 - 27.995 MHz). It is for old and sick local people. This is legal
broadcasting in Ireland since 2006,
but F2 gave the first signals in autumn 2011.

I have now
identified about 130 churches and have about 50 paper-letters back + emails. I have sent a CD-recording to
them and asked comments if that really is their church. I have not included my e-mail
although with that I'd have more replies a (letter is more beautiful than e-mail).

To start writing a paper-letter these days is "difficult" and takes time from the parish people (mainly priests),
but anyway this is not so good result as what I expected.

These churches are very
difficult to identify from the Masses, but possible. Especially for
the start 2 years

ago, and later, I had
significant help from Paul Logan, who can copy those difficult Irish
village-names incredibly well! Thanks to Paul.

F2 is about to
start. Let's see how it goes this season.

I think I will scan also my letter-replies from Italian and French FM-stations from 1980-1990-centuries. Most of those stations are now closed and gives memories to many people around.

Long time ago I have done this scanning-job also to my Dutch MW-pirate collection from the end of the 70's.
Those are letters, photos and stickers from Dutch AM-pirates:

Just Googled Studio Brussels - all the links are 'down' - either I get the home page with the picture in the cemetery or a totally blank page. Not only that audiolinks to Stu Bru and VRT2 in fmlist come up with error code 401 - "resource no longer available - please remove link" but links to RTBF and independents work. Links in listenlive.eu and surfmusic.de don't work either. So something odd is happening.

Tropo is poor so I'm not getting a good signal from Egem - nowhere near good enough for RDS. We'll have to see what tomorrow brings.

Rgds

Hi folks,

Just to remind, especially those of you interested in Meteor Scatter.
David, John. Mike etc...

The Geminids meteor shower maximum is bound today and just a few days
ahead, the Orionids max. will occur.

So far, i.e. take the last two to three days, sounds like it ain't
rocking in the sky as loudly as was last year. Then again, I haven't
spent that much time by the radio.

Anyways, best of luck with the rocks, folks!

Hi Jim,

You are right, THE Geminids are in December. Thanks for mentioning the fact.

I apologize, I should have written:
e-Geminids, which are a minor one. I just did not figure out the
Greek letter "e" on this keyboard, I typed too hastily.

Silly me. Well, at least my reminder about THE Geminids was well in
advance :-)

In that case, general convention is to refer to them as the "Eta-Geminids"
Or was it the "Epsilon Geminids" i.e. just type the greek letter in full.

Jim.

Hi Gunter,

I have Yaesu G- 1000C in my remote FMDX-site and it is USB-controlled
by ARS USB made by Spanish ham (EA4TX).

Products are here: http://www.ea4tx.com/ http://www.ea4tx.com/

It was not easy to connect. I had to solder two wires from ARS USB-
connectors to Yeasu controller S/N-press-buttons - and then adjust
the right voltage-levels inside ARS USB.

It has been working very well this summer, altough we had some troubles
with USB-stability in the first summer.

ARS USB can be connected to almost any rotator and there are a lot
of intructions for the connections.
Very good fast co-operation, help and maintenance from Pablo (ea4tx)!

If you need more info of this put me mail.

Yes - alternatives include MDS (http://www.mds-ham.com/ http://www.mds-ham.com/), Winrotor (http://www.funkbox.de/ http://www.funkbox.de/) and ERC (http://easy-rotor-control.com/ http://easy-rotor-control.com/). I have all three for various Yaesu rotators and use MDS and Winrotator. ERC comes as a kit which I have not assembled yet.

All work well with the superb software pstrotator which I normally have interfaced via software to HRD V5.

As Jurgen mentioned I'm using his USB controller with AR303.

Pros:
-No noise
-Smaller place needed
-Simple to install
-Easy to use
-More precise
-Simple to make correction(if needed)
-Small place needed on display
-You can control more than one unit

Cons: nothing

Congratulation to Jurgen for this great solution !

Yes a whole host of signals on the band throughout the evening here from the north coast of Spain from Santander to La Coruña, still ongoing. Some channels such as Euskadi Irratia on 88.9 have been up to 2 bars on the L-1000T with easy stereo. SW France has also been in with Toulouse/Pic du Midi and Bayonne present, sometimes at good strength.

A nice way to break in the new aerial! :D

Good DX.

I'm a bit late on this (thanks for the tip off from Nick Gilly). Amazed to get several Spaniards on the car radio in Reading on my way home in the last hour. Of particular note: instant ONDACERO RDS on 89.2.
Will get a chance to try at home later.

Yes - alternatives include MDS (http://www.mds-ham.com/), Winrotor (http://www.funkbox.de/) and ERC (http://easy-rotor-control.com/). I have all three for various Yaesu rotators and use MDS and Winrotator. ERC comes as a kit which I have not assembled yet.

All work well with the superb software pstrotator which I normally have interfaced via software to HRD V5.

Regards

Stuart

The Yaesu G-1000DXC can be computer-controlled, but the control box costs more than the rotor (630 USD!!).
Anyone using PC-controlled antenna rotors?

73,
Günter

34937. FM Tropo Logbook - Wednesday 22/10/2014

Yahoo group: SkywavesDX (2014)
Date: 2014-10-23 18:48:53 UTC
From: Ian Kelly
Topic: 34937 Message: 34937

Here are the logs I made from last night's unexpected tropo to Spain and southern France last night. "Two bar" signals at times on 103.9 and 105.0!

I was also able to hear some Spanish stations on just the car radio in and around Reading earlier in the evening, even when I was low down in Caversham by the River Thames. Alan Pennington, also in Caversham, said he heard 105.0 on a "Walkman" and Dave Kenny from Caversham also said that Spain via tropo was a first for him there, in 30 years.

Hi All,

Some unexpected tropospheric conditions into France this evening. Nothing compared to what the UK was getting yesterday though.
The forecast bodes well for good tropo next week.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hi John (Faulkner),

Your UNID's were forwarded to me by Max van Arnhem.

> 103 4 unid Spain 0026 23-10-14
> http://youtu.be/8nkoakD1ZqI

This is very likely Aire Radio from Oviedo. A card reading type program.

> 101 2 Possibly Radio Maria? Unlisted site, Spain 0103 23-10-14
> http://youtu.be/HJCK68nKQm0

This Radio María tx is from Bilbao.

73, Janpeter

Thank you so much for your help Janpeter.

Oviedo was heard on other frequencies so 103.4 fits perfectly.

My 105.2 is esRadio from Gijon.

So 101.2 is Bilbao! Listed as closed on FM List, it looks like this one has been reactivated. Bilbao was also received elsewhere at the time.

This only leaves 93.4, which is may be one of the two listed Basque stations. Oh, and I forgot 92.2, which had football commentary.

But lots of other stations ID'd and logged. I will post the full log tomorrow.

Best DX!

John

Heard with back to back music. It's an odd format so this might give
it away, knowing the approximate reception area too.

** Personal Skegness 'First'

An evening of spectacular tropospheric DX to northern Spain and
south-west France! Definitely my best to this area so far. Furthest
distance was the La Coruna transmitter at 1363 km, not a million miles
from the Portuguese border.

There were also LOTS of Spanish stations I couldn't identify due to their brief nature. Beaming south-west in vertical polarisation produces a full band of English stations from the Midlands, so the Spanish stations often had quite a fight on their hands.

I had to be extremely careful how I rotated the antenna too as the neighbour's tree is now greatly restricting movement in that direction. After some minor damage, which has since been rectified, I managed to get the antenna vertical and discovered that this was where the action was. Surprisingly, no Spanish tropo was available when the antenna was horizontal. I wanted to flip back to horizontal later on when I discovered local outlets from Bayonne, but it was the early hours of the morning by that time and the G-5500 rotator makes quite a racket. Sound travels well at night, so I kept the antenna vertical. Horizontal to the south-west is a noisy direction for me anyway so I probably wouldn't have benefited much horizontally anyway. I still don't understand why vertical is much quieter in this direction.

Videos of many of the above catches can be seen on my YouTube page: www.youtube.com/g1vvp

105.4 Radio Voz Ferrol Ferrol/Monte As Penas 1006 km
106.8 Spanish talk, perhaps RNE Radio 5 Todo Noticias Santander Castro Urdiales/Monte Cueto 885 km

Above are, from memory, what was received here on the evening of Wednesday, 22nd October 2014. I didn't have as much time as I would have liked during this superb lift as I had some other jobs to do and Hannah needed some attention too, so I may have missed a few. The tropo was already ongoing on the drive home from work as I picked up French chansons on 105.0 in the work car park which later on transpired to be RNE 5, so I knew conditions were good. There were a lot of signals across the band, some with good stable signals for a long time, others with slow and random fading. Certainly the best of them were 2 bars in Normal b/w on the L-1000T tuner with easy stereo.

I noticed that the 9.2 aerial was nice and directional during this tropo. 87.9 was one example where beaming SW brought in Kiss FM, whilst turning to about 160 degrees brought in France Inter from Toulouse. Both were completely separated. 103.9 was very similar with either Radio Galega or Sud Radio.

An interesting property of this lift was there was (mostly) little enhancement on the closer French signals suggesting good and proper ducting.

By the morning of the 23rd there were just a handful of long-distance signals left when I got up at 6.30 am local:

87.7 Euskadi Irratia (very weak)
87.9 France Inter
90.9 Los 40s Principales
92.7 France Musique
94.4 Euskadi Irratia
100.5 France Bleu Gascogne

By about 7.10 am the Spaniards had gone leaving just Toulouse on 87.9.

Good DX.

Nick, Whitchurch, Hampshire.

From: kpc850@...
Topic: 34922 Message: 34947

On car radio, some miles inland in east County Cork in Ireland last Wednesday afternoon (22nd Oct) I got the following Spanish transmissions at RDS levels :

106.8 "R.MARCA "
106.4 "RPA FM "

87.9: was also hearing French on 87.9 in the afternoon, not good enough for RDS, but it was France Inter as same programme, but lagging its 162kHz LW by very roughly a second or so

I would have no doubt heard much more if I had time to drive to the coast, to some locations which have some terrain shielding of inland stations.

34949. (Ireland) New Spirit Radio transmitter 92.2FM

Yahoo group: SkywavesDX (2014)

A new transmitter for Christian station 'Spirit Radio' has been introduced from 'Saggart' to extend coverage West and southwest of Dublin (County Kildare etc) on 92.2MHz FM

it is not yet listed on the station's own frequencies page:
www.spiritradio.ie/on-air/where-can-i-listen
http://www.spiritradio.ie/on-air/where-can-i-listen

During early afternoon Ireland was coming up nicely later I saw Paul Logans alert so I beamed South and came across SER 100.9 which was fading in and out.
Later Spain was all over the band similar to an E's opening and most of the reception was on the vertical FM 3 but odd ones were on horizontal Euskadi Irratia 87.7 was solid with full RDS all evening.

The signals were so strong the vertical dipole was receiving them fairly good.
This is the best tropo opening from Spain here so videos will follow when I have edited them.

Andy

Niort is in here on 96.4 and 99.4, weak and with some QSB but it's definitely tropo-related. The nearer cross-Channel signals are also on the up. Signals to the north are enhancing somewhat too with e.g. BBC Leicester 104.9 and Capital 105.4 peaking in stereo.

Good DX.

Nick, Whitchurch, Hampshire.

During early afternoon Ireland was coming up nicely later I saw Paul Logans alert so I beamed South and came across SER 100.9 which was fading in and out.
Later Spain was all over the band similar to an E's opening and most of the reception was on the vertical FM 3 but odd ones were on horizontal Euskadi Irratia 87.7 was solid with full RDS all evening.

The signals were so strong the vertical dipole was receiving them fairly good.
This is the best tropo opening from Spain here so videos will follow when I have edited them.

Andy

During
early afternoon Ireland was coming up nicely later I saw Paul Logans alert so I beamed South and came across SER 100.9 which was fading in and out.
Later
Spain was all over the band similar to an E's opening and most of the reception was on the vertical FM 3 but odd ones were on horizontal Euskadi Irratia 87.7 was solid with full RDS all evening.

The
signals were so strong the vertical dipole was receiving them fairly
good.
This
is the best tropo opening from Spain here so videos will follow when I have edited them.

Subject: [SkywavesDX] Tropo central France

Some nice distances into France recently with Lyon Mont Pilat, Guéret, and Reims in. Parthenay has been in all day.

Good DX.

Nick, Whitchurch, Hampshire.

34971. Band II Tropospheric Loggings for 27 October 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-10-26 23:59:11 UTC
From: Janpeter van Dijk
Topic: 168 Message: 34971

Hi All,

The forecasted tropospheric lift has started. If the predictions are accurate, good conditions should persist the coming two days. The start today is in any case promising.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Hi,

FMLIST is stuck. At least somehow. Everything works, except when entering a logging. Then it freezes and a new login is required.
Nice conditions, so bad timing.

73, Janpeter

Some very good conditions this morning with the band absolutely packed with signals from France, Belgium and Germany. Germany is mostly WDR and HR but also Donnnersberg on 105.6.

Good DX.

Nick, Whitchurch, Hampshire.

Kenwood L-1000T, Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, horizontal Körner 9.2 beam (Antennenland version), Yaesu G-450C rotator

There were quite a lot of German signals on the band when I got home at 5.20 pm including Grünten on 106.9 and Hornisgrinde on 98.4. However since then conditions have been going downhill with most of the German DX gone. I also heard a weak France Inter on 87.9 earlier on briefly from Toulouse/Pic du Midi.

I have found that sometimes the noise floor is noticeably higher beaming east (like tonight), and the quietest direction in general is south. South is where my 'local' BBC national relay at Rowridge is as well so I have been tending to beam that way since the aerial overhaul.

Good DX.

Nick, Whitchurch, Hampshire.

Hi All,

The last couple of days gave a period with truly fantastic tropospheric Band II enhancement. Things started to develop Sunday evening and lasted non-stop until the early hours of today, Wednesday. The DX came in from multiple directions simultaneously, often with both shorter and longer distances being lifted. This made up for a very full loaded FM band, which put the Sony XDR - Körner 15.11 truly to the test. Mostly, only a 10° turn of the antenna resulted in a completely different result in terms of what could be heard, when tuning the band. Taking everything into account, this was a very seldomly occurring DX event. Accurately forecasted by Hepburn.
Below my loggings for Monday. Loggings for Tuesday will be posted shortly.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

34993. Tropo building nicely

Yahoo group: SkywavesDX (2014)
Date: 2014-10-29 20:55:00 UTC
From: nick gilly
Topic: 34993 Message: 34993

Toulouse in on 87.9, weak but clear and Niort 2 bars solid in stereo on 96.4 and 99.4, 91.1 slightly weaker.

Good DX.

Nick, Whitchurch, Hampshire.

Kenwood L-1000T, Yamaha T-2, Sony ST-SA5ES, Denon TU-800L, Kenwood KT-1100SD (modified), Yamaha T-85, Sony XDR-F1HD tuners, horizontal Körner 9.2 beam (Antennenland version), Yaesu G-450C rotator

34994. Re: [SkywavesDX] Tropo building nicely

Yahoo group: SkywavesDX (2014)

From: nick gilly
Topic: 34993 Message: 34994

France bleu Gascogne has been in on 100.5 for the last hour at least as well as Sud Radio 103.9 (weak at best) and France Musique, all from Bayonne/La Rhune. Nothing from Spain as yet.

Good DX.

Nick, Whitchurch, Hampshire.

Other txes heard in the last 110 minutes:

Clermont-Ferrand
Lyon Mont Pilat
Guéret
Ussel-Meymac

and the highlight so far: a weak France Culture on 90.5 which was peaking SSE, which I think must be the Souillac/les Bruges Pipiou tx with 200 watts at 737 km.

Good DX.

From: nick gilly
Topic: 34998 Message: 34998

Conditions have swung round this morning towards NE France, Belgium and Luxembourg e.g.

Lille (up to 4 bars)
Dudelange (up to 3 bars)
Léglise
Anderlues
Tournai
Hirson
Reims
Troyes

plus a weak Hornsigrinde heard earlier on on 98.4. Usual cross-channel signals are also up.

Good DX.

Nick, Whitchurch, Hampshire.

In Languedoc I'm getting continuous data with bursts around 2.5kHz - occasionally burst around 2.1 kHz. Some form of multi-fsk signal I guess.

Stuart

Just worked C5YK (Gambia) on 6m cw - genuine 599 in Carcassonne. F2 propagation is certainly here.

Regards

Stuart

ps

Serious question - has the owner of vhfskip died? None of my posts ever appear!

Thanks, Tim.

No sign of 39.04 here but am getting French taxis on 42.65. It's horribly distorted but I think I detect Quebecois accent. Mentions of Laval point to Quebec as well. Wonder if Paul L has heard this one?

Regards

Stuart

It's disappeared now but I'm pretty sure it was from Quebec, and not Pays de la Loire. I didn't make any recordings but I can usually differentiate between French (northern), French (midi) and quebecois accents.

Regards

Stuart

105.5 France Info multiple sites

106.3 unid with Pink Floyd track

A very nice lift into SW and central France developed on the evening of the 29th October as a warm front moved north of here introducing warm humid air from the S/SW. Conditions seemed a little elevated when I got back from work with varying and fluttery signals from the likes of Niort as well as background levels on the nearer cross-Channel signals being above normal. However, it was just before 8 pm that I noticed that Toulouse on 87.9 was starting to push through the weak fluttery signal from Parthenay, which gradually stabilised and reached fai mono levels. Shortly after this I noticed France Bleu Gascogne on 100.5 from Bayonne, also weak. I tried the usual suspect frequencies for Spain but nothing was heard, although 88.9 did yield a weak French phone-in which turned out to be Skyrock from St. Brieuc.

Signals from Niort and Bayonne steadily increased in strength (87.9 was to be occupied by Parthenay for most of the remaining period) and were later joined by other signals from more inland/central parts such as Tours, Bordeaux (89.7 which was in for quite a while), Ussel-Meymac, Lyon, Clermont-Ferrand, Argenton-sur-Creuse and Chartres. I thought Bordeaux was going to be the highlight but then at around midnight I found a weak France Culture on 90.5. Looking it up on myFM the only transmitter that fit the conditions was Souillac at 737 km and listed with just 200 watts! It got taken out by R3 shortly afterwards abut it came back a little later and was almost fully-quieting at 12.30 am. So some very good conditions indeed, and better than I was expecting.

The above log doesn't include txes that are available on demand/frequently such as Caen, Rennes, Les Platons, Laval, Alençon, Le Mans, Brest, Rouen etc.

Maybe we will get some more decent conditions over the next 24 hours before the weather deteriorates over the weekend. We can but hope.

Good DX.

Nick, Whitchurch, Hampshire.

Dear All,
not sure of the terminology for subharmonics but i assume these count
as "3rd subharmonics"

65.75 Telekanal Ukrainian TV Audio 3rd sub Hx of R9 audio
76.4 unid with very local election coverage, 3rd sub hx of R12 audio

Radio France headquarters and studios building which is located in Paris
was on fire today.
Spare studios and control centers are located in other places than this
main building

The 2 MW LW transmitter and its aerial is located near Allouis, i.e.
center part of France.

35025. Band II Tropospheric Loggings for 31 October 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-11-01 07:52:17 UTC
From: Janpeter van Dijk
Topic: 168 Message: 35025

Hi All,

Yesterday saw again very intens tropospheric Band II conditions. The signal strength of stations from Belgium, France and Germany was enormous.
It is incredible that the Sony XDR is able to take all those signals, without getting overloaded.
A lot was received on the vertical antenna. I was very pleased with Radio 700 on 87.45 MHz.

Best regards,
Janpeter van Dijk, Zoetermeer, The Netherlands.

Friday 31 October 2014

Excellent logs Janpeter! I was right on the edge of it yesterday evening with a weak signal from WDR 4 on 100.5 from Teutoburger Wald and hints of Steinkimmen on 91.1.

One question which occurs to me about Radio 700 - how many tuners are going to be able to tune down to 87.45 MHz to hear them properly? They are limiting their options a bit! I wonder what power they run, as they aren't on FMLIST.

Good DX.

Nick, Whitchurch, Hampshire.

Their 87.45 tx is considered to be a STL, not for the public. They have heavily objected against publishing any details.
Honi soit qui mal y pense!

Hi Günter,

Why would they object against publicity? This isn't an illegal transmitter, is it?

Hi Nick,

Thank you for your kind words. I am sending them in return for all your nice loggings of the last weeks. And congratulations for now having a rotator!

You will probably have seen Günters e-mail on Radio 700. So it is not a regular broadcasting transmitter. I would suggest that you use the 'show all' option in MyFM. Then you will also see closed, inactive, temporary and hidden stations. Radio 700 is one of the hidden ones.

73, Janpeter

Onderwerp: Re: [SkywavesDX] Band II Tropospheric Loggings for 31 October 2014

Excellent logs Janpeter! I was right on the edge of it yesterday evening with a weak signal from WDR 4 on 100.5 from Teutoburger Wald and hints of Steinkimmen on 91.1.

One question which occurs to me about Radio 700 - how many tuners are going to be able to tune down to 87.45 MHz to hear them properly? They are limiting their options a bit! I wonder what power they run, as they aren't on FMLIST.

Good DX.

Nick, Whitchurch, Hampshire.

Maybe not. I was just not aware of its existence until a couple of weeks ago. Yesterday was the first time I tried to get it. It was actually quite strong, but conditions for that skip distance were also very good. I will check this QRG more regularly from now on.

> adjacent channels are also reduced, and weak ones end up in noise.

Yes, 100% spot on. THE big disadvantage of using this tuner. And I wonder if something could be done about this. With the Konrad / Guillaume software a lot of functionality has been added to the standard features. So maybe it is possible to add a control function, to manually adjust the attenuation.

Hi Tim,

Yes, I did tune it on the XDR. It was a rather strong signal on my vertical antenna. So it should be able to get out into the UK, if conditions are right. Maybe we should put up a contest, which UK DXer will be the first to receive it?

Hi Jürgen,

What you write is all very interesting. In view of this, how would you classify this SDR radio: http://www.sdrplay.com/

I am seriously considering buying it, because the 8 MHz bandwidth is very tempting. But I do have a very full local dial, with some very strong signals in almost all directions. So I would hate to spend € 220 on a piece of equipment that is useless for my location.

Hi Janpeter,

> Maybe not. I was just not aware of its existence until a couple of weeks ago.

That's the advantage of SDR radios.
I saw it in the spectrum and got curious what it was.

When I posted it here some years ago, a person of R700 did reply.

To be fair to them, don't make much publicity about it when they don't want that. Just enjoy this unique frequency. Otherwise they might move elsewhere and you loose it.

> Yes, 100% spot on. THE big disadvantage of using this tuner. And I wonder if
> something could be done about this. With the Konrad / Guillaume software a lot

> possible to add a control function, to manually adjust the attenuation.

Software can't do that. It's the dynamic range of the analog-digital converter.
If a signal exceeds the limits you need to reduce the input level.

Perseus does not have that automatic function, its dynamic range is a bit larger. But if a signal exceeds that, the ADC starts clipping and the entire FM band becomes useless, not just the adjacent channels. Then you need to turn on the attenuator manually, which also lowers all weak ones.

In my case I can get Wrotham / Tacolneston / Holme Moss daily, while my local Bremerhaven tx 5 x 25kW are just below the max limits. I would have been lost if they use 100kW or more.
The only solution is to get a SDR with a 16 bit (or more) ADC
Perseus uses a 14 bit ADC

So XDR is a good compromise for all levels

Hi Nick,

Congratulations on your all of these great loggings from France. You got France much better than we did here.
Regarding the France Culture logging on 90.5 MHz. Could this not have been Chambéry? This site is not very far away from Lyon, which you also had.

Just a thought.

A very nice lift into SW and central France developed on the evening of the 29th October as a warm front moved north of here introducing warm humid air from the S/SW. Conditions seemed a little elevated when I got back from work with varying and fluttery signals from the likes of Niort as well as background levels on the nearer cross-Channel signals being above normal. However, it was just before 8 pm that I noticed that Toulouse on 87.9 was starting to push through the weak fluttery signal from Parthenay, which gradually stabilised and reached fai mono levels. Shortly after this I noticed France Bleu Gascogne on 100.5 from Bayonne, also weak. I tried the usual suspect frequencies for Spain but nothing was heard, although 88.9 did yield a weak French phone-in which turned out to be Skyrock from St. Brieuc.

Signals from Niort and Bayonne steadily increased in strength (87.9 was to be occupied by Parthenay for most of the remaining period) and were later joined by other signals from more inland/central parts such as Tours, Bordeaux (89.7 which was in for quite a while), Ussel-Meymac, Lyon, Clermont-Ferrand, Argenton-sur-Creuse and Chartres. I thought Bordeaux was going to be the highlight but then at around midnight I found a weak France Culture on 90.5. Looking it up on myFM the only transmitter that fit the conditions was Souillac at 737 km and listed with just 200 watts! It got taken out by R3 shortly afterwards abut it came back a little later and was almost fully-quieting at 12.30 am. So some very good conditions indeed, and better than I was expecting.

The above log doesn't include txes that are available on demand/frequently such as Caen, Rennes, Les Platons, Laval, Alençon, Le Mans, Brest, Rouen etc.

Maybe we will get some more decent conditions over the next 24 hours before the weather deteriorates over the weekend. We can but hope.

Good DX.

Thanks very much Janpeter, and yes you are right, it was very likely to be Chambéry on 90.5. I meant to post that on here (I did on the new forum) but forgot to update. It was only after seeing that Chambéry was SE of Lyon that I realised it was the likely site. For some reason I thought it was further north towards Switzerland. Nevertheless some very nice conditions into central and SW France. I hope we don't have to wait too long until the next good tropo lift.

Congratulations from me on the excellent logs into Germany on Friday evening also. Some amazing DAB catches into the Netherlands.

Good DX.

Hi Nick,

Congratulations on your all of these great loggings from France. You got France much better than we did here.
Regarding the France Culture logging on 90.5 MHz. Could this not have been Chambéry? This site is not very far away from Lyon, which you also had.

Just a thought.

73, Janpeter

Topic: 35051 Message: 35051

Here is a clip of France Musique on 89.9 from Rennes, distance 330 km, recorded late yesterday evening:

https://app.box.com/s/33nk1ts7d43negefb3ue

As
you can hear there are random fluctuations in signal strength, which don't sound like aircraft scatter but almost remind me of the type of fading that happens with E-skip (there is a slight amount of aircraft reflection briefly around 45-55 seconds). It's obviously tropospheric, but what sort of scatter produces reception like this? Is this pure troposcatter? It is very different from the choppy and fluttery reception I tend to get from transmitters with paths mostly over land such as Lille or Tournai.

Thanks for any help on this.

Good DX.

Nick, Whitchurch, Hampshire.

>Sounds like AS.
I agree.

>You have cycles in between, so 2 paths are changing lengths.
>Unfortunately you don't hear the peak levels (audio does not reveal those).
>Thus better plot the s-meter over time, that makes it much better visible.

Yes, and if your tuner is equipped with multipath output for an oscilloscope, you can see how the “modulation line” turns into a moving wave as the lengths of the two paths change over time, producing frequency dependent additions and subtractions of the signal.

Peter

Thanks Jurgen and Peter. It was the random-sounding element of the fading that got me curious as it sounded different to the norm.

Three of my tuners have oscilloscope outputs but I don't have an oscilloscope...

Hi Nick,

I know a number of other people have suggested this is aircraft scatter, but to me it sounds like regular troposcatter. I find that aircraft scatter has large and sudden changes in signal strength, and the reception typically lasts around a minute or less. Your clip has fairly consistent reception for around five minutes, and given how far an aircraft travels in five minutes I don’t see that it could produce reception this consistent.

Here is an aircraft scatter recording I made a while back: http://youtu.be/WiNAnPiDWwU

Here is a troposcatter recording I made a while back: http://youtu.be/n64CeEI4pzA

I’d be interested to hear some more thoughts on yours and my clips.

Regards,

Martin

Hi Martin. I am inclined to agree, especially after reading the Wikipedia article on the subject:

http://en.wikipedia.org/wiki/Tropospheric_scatter[

That article also says that up to 99.98% efficiency can be achieved using TS, which suggests that it is there all the time.

As for my recording, I could have filled up an entire CD (80 minutes) of 89.9 behaving like that. So I think this was troposcatter, not aircraft scatter. I can't see aircraft supporting reflections constantly, particularly at that time of night, plus the fading sounds random. During the day, the effects of AS are more obvious, including interruptions from co-channel Wenvoe.

Good DX.

Sorry, I meant to comment on your videos Martin (doing several things at once here). The first one is definitely aircraft scatter. The second one almost sounds to me like a tropo duct is trying to form as the signal is stable for several minutes. Was this the early stages of a tropo lift?

As for my recording, I could have filled up an entire CD (80 minutes) of 89.9 behaving like that. So I think this was troposcatter, not aircraft scatter. I can't see aircraft supporting reflections constantly, particularly at that time of night, plus the fading sounds
random. During the day, the effects of AS are more obvious, including interruptions from co-channel Wenvoe.

Good DX.

Nick, Whitchurch, Hampshire.

Hi Nick,

I know a number of other people have suggested this is aircraft scatter, but to me it sounds like regular troposcatter. I find that aircraft scatter has large and sudden changes in signal strength, and the reception typically lasts around a minute or less. Your clip has fairly consistent reception for around five minutes, and given how far an aircraft

travels in five minutes I don’t see that it could produce reception this consistent.

Here is an aircraft scatter recording I made a while back: http://youtu.be/WiNAnPiDWwU
Here is a troposcatter recording I made a while back: http://youtu.be/n64CeEI4pzA

I’d be interested to hear some more thoughts on yours and my clips.

Regards,
Martin

Here is a clip of France Musique on 89.9 from Rennes, distance 330 km, recorded late yesterday evening:

https://app.box.com/s/33nk1ts7d43negefb3ue

As
you can hear there are random fluctuations in signal strength, which
don't sound like aircraft scatter but almost remind me of the type of
fading that happens with E-skip (there is a slight amount of aircraft
reflection briefly around 45-55 seconds). It's obviously tropospheric,
but what sort of scatter produces reception like this? Is this pure
troposcatter? It is very different from the choppy and fluttery
reception I tend to get from transmitters with paths mostly over land
such as Lille or Tournai.

Thanks for any help on this.

Good DX.

Nick, Whitchurch, Hampshire.

Brock,
Your indoor diplole (and any other FM DX aerial you have) , what difference does it make to signal strength of North Hessary Tor if you flip between horizontal and vertical polarisation ?

35071. Re: [SkywavesDX] Re:: A simple question

Nothing special. I have four simple 1/2 wire dipoles. One is cut for 29 MHz,10 meter amateur AM, Horizontal towards the U.S.
One is cut for 120 MHz, vertical. I have good reception from both the Limerick and Cork ATIS transmitters.
One is cut for 88 MHz horizontal and is aimed almost due east for E-skip.
The dipole for 92.5 is really more of a "V" shape, with the focus of the "V" towards the BBC transmitter. This works best for reliable reception. I did of course experiment, I found the horizontal polarization gave stronger signals from the target.

I have a pre-amp salvaged out of a NIKKAI indoor television antenna. It is broad banded without tuning and seems to cover 25 MHz up through UHF. It does add quite a bit of noise but has a gain control, and has helped on weak signals.

I am from the states, and DXed TV quite a bit in the analog days. I grew up in Tampa Bay with almost daily tropo, and spent many years in Hawaii. No local DX there, but channel 1 New Zealand on a converted battery set, and my best TV DX ever, KGO-TV on American Band III channel 7 from San Francisco during the yearly west coast/Hawaii tropo opening in July of 1984. The FM band was full of California stations for three days! This was on rabbit ears so you just never know...
73's and good DX,
Brock

35072. The unmentionable German station on 87.45

Yahoo group: SkywavesDX (2014)
Date: 2014-11-08 10:39:26 UTC
From: John Faulkner, Skegness
Topic: 35072 Message: 35072

I am pleased to report that the "Radio Seven Hundred" link has been received here several times this morning via meteor scatter.

I only checked the frequency when I realised that German scatter was good. The Langenberg transmitter has been coming in at 30dB this morning (and can often do better than this when conditions are better, producing RDS). So I checked 87.45. It is possible I *might* be hearing something down in the noise when the 9.2 antenna is vertical, but this is a long way from certain. I soon realised I was receiving this station when I heard a one second meteor burst of a German song which was in // with heir web stream. There were more pings, further confirming this.

So can I receive this station on general scatter? Well, if all things are equal, and considering the dB differences between 100kW and 60 watts, you see that this is theoretically possible, but I think Kenwick Top would be the place to check this as I have too much noise here.

I will attempt to get a video recording of the meteor scatter shortly.

Good DX!

John

He is in NO35ci if you have access to a grid map. He is north of where Mongolia and Kazakhstan meet, to give you an idea of longitude.

Depends on what sort of antenna you are running. I have a Windom dipole up and I would regard that as fairly run-of-the-mill on 10m under current conditions.

Jim.

Barnaul taxi shouldn’t bloody be there. Bloody intruders x-(

Tim, look out for UA0 or RA0, they are further East. China should be audible too, perhaps JA during the next week or two, though that path gets more difficult the nearer to the solstice we get.

From: Tim Bucknall
Topic: 35072 Message: 35080

Thanks Jim,
very useful callsign tips

I send all my taxi logs to intruder alert fwiw

35081. German Nacht Services

Yahoo group: SkywavesDX (2014)
Date: 2014-11-08 12:16:43 UTC
From: John Faulkner, Skegness
Topic: 35081 Message: 35081

Can somebody tell me if Antenne MV and Antenne Niedersachsen share any overnight programming? The usual m3u stream from Antenne Niedersachsen was down overnight.

Thanks

John

Difficult one to answer Tim. I had to detune to 87.46 because of interference from my computer on 87.45, so the audio I had was slightly distorted. Once I have finished my overnight meteor scatter recording I will switch off the main PC and record on the laptop. I didn't want to have to re-load hours of overnight streams as this takes forever. I have no doubt that this station will be regularly available via MS.

I'm quite sure the audio will be of the usual 'quieter' German standard.

John

Still going through my overnight meteor scatter for 103.8 and I have a recording of the weather jingle from Antenne MV, so it *is* Helpterburg's Antenne MV I am receiving and not Antenne Niedersachsen.

Still curious if they carry the same overnight service though.

John

35084. Radio 700 via general scatter?

Yahoo group: SkywavesDX (2014)
Date: 2014-11-08 16:44:30 UTC
From: John Faulkner, Skegness
Topic: 35084 Message: 35084

http://youtu.be/jf3xafi1UyM

This is not a "headphone job", it's a "sub-bass job". I'm sure this will be challenged but I am sure I can hear the sub-bass from Radio 700 when I boost the sub-50Hz frequencies on my audio system.

I was hoping to catch meteor scatter from Radio 700, but it seems it is just about audible via general scatter, be it aircraft scatter or troposcatter. See what you think towards the end of the recording. You can hear me switching in the audio from the web stream via the Windows sound card control panel. I also switch to 101.3 to catch Langenberg, which is still coming through on the vertical 9.2. This has been a good day for scatter too.his, but

I don't expect everybody will hear this, especially if you can't boost sub-bass frequencies, but I welcome your comments.

John

I'm not even going to attempt it on these speakers but considering
your location ,
its well within the 800km scatter limit (its 642 from Congleton)

factor in the empty channel..

I have no difficulty accepting your claim

John, at TOTH, go 87.449 usb mode and during the nx bulletin
listen for squelch!, splat! squelch! pppffft!

-use the IC-7000 it would confirm that the signal is on 87.45

My computer is tied up for an hour (recording MW and also looking at MS
on 108.0 where I think I just heard Love FM on MS) but I will see if I
can route the 9.2 to the IC7000 for the toh. This would probably be
better around sunrise when the scatter improves.

and the fact that this is vertical, which is a quieter polarization for
me. Don't vertical signals travel further anyway? (Don't quote me on that)
>
> >
> > I have no difficulty accepting your claim
>
It needs to be more concrete than this but I have been watching the
87.45 noise floor change with each fade-in of Langenberg elsewhere. It's
definitely there, but when you look at the dB range between 100,000
watts to 60 watts you see this should be possible and we now know this
transmitter can get out thanks to the recent tropo reports. Without some
kind of enhancement you are looking at 'trace level' and not much more.

Hmm. In the time it's taken me to type this email the top of the hour
has crept up. 9.2 > IC7000 and nothing - no news on the hour, just
continuing pops.

John

35093. Re: [SkywavesDX] What sort of scatter is this?

Yahoo group: SkywavesDX (2014)
Date: 2014-11-10 06:48:55 UTC
From: Martin Payne
Topic: 35051 Message: 35093

Hi Nick,

As far as I can remember, conditions were fairly normal when I made that recording. Holme Moss is frequently audible here in South London, and often rises up out of the noise like this and then fades back out.

I note that Holme Moss is mainly received here via troposcatter, whereas Tacolneston is mainly received by aircraft scatter. Oxford is received via troposcatter with additional peaks from aircraft scatter. Rowridge comes in via troposcatter too, and the audio has a slightly odd quality to it where there is fast fading on the signal in addition to a much slower fading. I've noticed the same thing when I've received Wrotham whilst in Dorset, so maybe there is something specific about that path.

It's strange how there is a fair amount of information on the different types of tropospheric propagation modes and how they work, but there aren't many good descriptions of how the audio might sound!

Regards,

Martin

Sorry, I meant to comment on your videos Martin (doing several things at once here). The first one is definitely aircraft scatter. The second one almost sounds to me like a tropo duct is trying to form as the signal is stable for several minutes. Was this the early stages of a tropo lift?

Good DX.

Nick, Whitchurch, Hampshire.

Hi Martin. I am inclined to agree, especially after reading the Wikipedia article on the subject:

http://en.wikipedia.org/wiki/Tropospheric_scatter[

That article also says that up to 99.98% efficiency can be achieved using TS, which suggests that it is there all the time.

As for my recording, I could have filled up an entire CD (80 minutes) of 89.9 behaving like that. So I think this was troposcatter, not aircraft scatter. I can't see aircraft supporting reflections constantly, particularly at that time of night, plus the fading sounds random. During the day, the effects of AS are more obvious, including interruptions from co-channel Wenvoe.

Good DX.

Hi Nick,

I know a number of other people have suggested this is aircraft scatter, but to me it sounds like regular troposcatter. I find that aircraft scatter has large and sudden changes in signal strength, and the reception typically lasts around a minute or less. Your clip has fairly consistent reception for around five minutes, and given how far an aircraft travels in five minutes I don’t see that it could produce reception this consistent.

Here is an aircraft scatter recording I made a while back: http://youtu.be/WiNAnPiDWwU

Here is a troposcatter recording I made a while back: http://youtu.be/n64CeEI4pzA

I’d be interested to hear some more thoughts on yours and my clips.

Regards,

Martin

Here is a clip of France Musique on 89.9 from Rennes, distance 330 km, recorded late yesterday evening:

https://app.box.com/s/33nk1ts7d43negefb3ue

As you can hear there are random fluctuations in signal strength, which don't sound like aircraft scatter but almost remind me of the type of fading that happens with E-skip (there is a slight amount of aircraft reflection briefly around 45-55 seconds). It's obviously tropospheric, but what sort of scatter produces reception like this? Is this pure troposcatter? It is very different from the choppy and fluttery reception I tend to get from transmitters with paths mostly over land such as Lille or Tournai.

Thanks for any help on this.

Good DX.

Nick, Whitchurch, Hampshire.

Topic: 35094 Message: 35094

http://youtu.be/NRTxl3Xe4JM

Grabbed this overnight. This includes a nice burst of a female presenter at the end of the video.

60 watts @ 519 km.

Hopefully, when scatter improves, I might be lucky enough to get a decent recording of this station via scatter. There's no doubt in my mind that this is definitely what I am hearing on 87.45, but it's (understandably) extremely weak and right down into the noise.

Good DX!

John

35101. Anniversary celebrations

Yahoo group: SkywavesDX (2014)
Date: 2014-11-11 23:20:19 UTC
From: julian@...
Topic: 35101 Message: 35101

Today, 11th of November, has seen the annual act of remembrance for the loss and suffering caused by the First World War. This was widely observed in the UK and, I'm sure, throughout Europe, Austrasia and elsewhere, on the 96th anniversary of the Armistice.

Nearly five generations after the event, the facts are beginning to be blurred, and the British public seem to be remembering the day as the centenary of the outbreak of war (which was 28 July 1914) and have been mourning the needless deaths of 888,246 servicemen (ten times as many soldiers died in total throughout Europe). The media have recalled tragic tales of for example young men who died in forced labour during the construction of the Thailand-Burma Railway, and of other anachronisms.

Nevertheless, the sentiments are genuine and heartfelt, and if the sentiments are the same throughout the continent then we can rejoice in a new-found unity of purpose

- Julian

Here in Germany WW2 overshadows WW1. Only because it was 100 years ago when WW1 started, it came back into the foreground this year.
I only learned about remembering WW1 when I travelled in Belgium.

11.Nov is a holiday in Belgium.

I just heard the death rate was 250 soldiers per hour. Hard to believe.

November is a strange month of events: (joy and horror side by side)

11-Nov the carnival seasons starts at 11:11 (and ends in Febuary)

9-Nov:
- Berlin wall opened in 1989
- Reichskristallnacht took place in 1938
http://en.wikipedia.org/wiki/Kristallnacht

Like in the United Kingdom, Australia observes a one minute silence in the morning http://www.awm.gov.au/commemoration/remembrance/ of 11 November. The dismantling of the Berlin Wall's 25th anniversary also received a lot of print/electronic & broadcast media attention in this country. Both are extremely important events.

My own personal view is that it's crucial that as individual human beings we continue to respectfully remember and as accurately as possible (especially with the aid of professionally trained historians & anthropologists) analyse these important (and often horrifyingly traumatic) events.

Cheers

Leigh

35104. Elad FDM-S2 Vs Sony XDR-F1HD - Initial Comparison

Yahoo group: SkywavesDX (2014)
Date: 2014-11-13 10:24:14 UTC
From: John Faulkner, Skegness
Topic: 35104 Message: 35104

To begin with, I must stress that these are only my initial findings. I don't want to make a big issue of anything until I am certain I have everything set correctly.

After comparing the Elad FDM-S2 with the Sony XDR-F1HD, the first words which come to mind are "very disappointed". The most striking thing is the lack of sensitivity of the S2. I already understood that the S2 had less gain than the XDR and that I might need a pre-amp to boost signals, but why so? The difference in gain is so striking that I wouldn't be surprised to learn that my S2 is not aligned correctly, such is the difference.

To demonstrate this, here is a recording I made a few minutes ago of Antenne Niedersachsen on 105.7. See if you can tell the difference. No prizes for guessing which receiver is which.

https://app.box.com/s/sg4kpsa4v0cpy34kjjbc

Another annoying thing is the popping sound I get whenever I set the bandwidth to 3 MHz or higher. I guess it isn't a CPU issue. Even at maximum 6 MHz bandwidth my computer is able to handle the pressure and only uses 4% of its CPU resources. Maybe the problem is the soundcard or some other device in the computer. What though?

Another thing I have noticed is that when the bandwidth is set to 3 MHz or 6 MHz, the S2 loses the ability to decode RDS. Otherwise, at 1.5 MHz bandwidth and lower, RDS data decodes satisfactorily, but it's still not as sentitive as the XDR, and we know how insensitive the XDR is regarding RDS.

There are other minor issues, no doubt due to me not having set the software correctly, and speaking of software, the basics are simple enough, but the various settings available are quite mind-boggling. There's a lot to learn and this SDR can obviously do a lot, but I am not sure it's going to be the answer to our DX dreams without the sensitivity and RDS issues being resolved.

Before I post my findings to the Elad group I will post this information to our Yahoo and BB forums. My hope is that these problems are simply because there is something I haven't set correctly.

John

Thanks John, for taking the time to experiment and publish your findings regarding the Elad Vs the Sony.
It would appear that the Sony wins hands-down, when comparing to the Elad, under marginal (eg real DX) conditions. It just goes to show that SDR receivers don't quite cut the mustard yet.
The Sony XDR-F1HD lives to fight another day!

Hi Chris.

Yes, the XDR wins hands down, at least 'barefoot'.

But ... I have just been chatting to Jim Smith in the chat, and we went through a few things. The first was to check for overload. Beaming at Belmont I get -49dB (S9 +40). This is not strong enough to desensitise the S2. There's no overload, considering the multiple services coming from this transmitter. I checked elsewhere, in and out of the band, but not a single sign of any overload or de-sensing.

Next was to insert the Fringe 20dB masthead pre-amp - at the rx end of the coax for now. If I recall correctly, this pre-amp has S/N 20/1.8 dB. Suddenly, DX started appearing everywhere, and without obvious overload. I rotated to Steinkimmen and heard a signal which rivalled that of the XDR earlier. Other transmitters were heard well, including Brocken, Rangstrup and even a smidgin of Inselberg.

Next, the RDS, which saw no improvement. Switching software to SDR Console solved that. The RDS 'seems' to be as good as the XDR software, though I haven't done any serious comparison of this. This should improve when the audio is piped into RDS Spy, however.

So that appears to be the main issues dealt with. Furthermore, I am not losing RDS when switching to 6 MHz bandwidth in Console.

The frequent popping sound when in 3 MHz+ bandwidth remains, but that is probably a hardware issue within the computer.

So, this has solved most of the problems and I suppose I now need to get the mast down and install the pre-amp by the antenna.

John

Hi John,

Thanks again for your continued efforts regarding the Elad. It makes very interesting reading.
You are in a lucky location, in that no overload of the tuner occurs (even when using a pre-amp). I don't believe I would be so lucky, living only 15 miles line-of-sight from Belmont. At least Belmont doesn't TX at 250kW x 4, as does the likes of Holme Moss.

Good luck with installing the pre-amp at the masthead. At Band II there won't be much loss in the co-ax, so you could mount the pre-amp at the base of the mast, where you could gain easy access to it, without too much fuss. Also remember, the Fringe pre-amp may not extend down to include OIRT frequencies.

John, Chris, group --

good afternoon!

John: thank you again for sharing your experience of S2 and XDR.

Do you guys happen to know about similar comparisons between Sony XDR and FunDonglePro+? FDP+ includes several filters, but I haven't read anything specifically to the 88-108MHz segment.

A number of DXers are also using the now popular RTL SDR for several bands and modes (including TV DX), but I believe RTLs cannot handle busy bands with several strong signals as gracefully as desktop and Silicon Labs portable receivers.

(AirSpy is the new kid in the block. A review has been published two days ago on YouTube. Gorgeous 9MHz capture, much better noise floor and bit depth).

Thank you!

Well, I am pleased to report some more good news after doing a few more comparisons. Looking at the RDS capabilities between the S2 and XDR, using the supplied S2 software (which is really _very_ good btw) I can report that they are now either equal in sensitivity or that the S2 has the edge. I am quite sure the latter is true after comparing various signals on the band. But when I run the S2 through RDS Console v2.3, the RDS is clearly quicker to form and at a lower threshold. Better still, I understand that RDS Spy can be run with the S2 software (it can't with SDR Console at the moment, sadly) and this is supposed to lower the RDS threshold further still! So excellent news.

For the above comparisons I had the pre-amp inline with the antenna on the S2 but not inline when running into the XDR. In the past when I have used the pre-amp inline to the XDR it showed no benefits in improving the RDS performance. Interesting that there is a very obvious improvement when the pre-amp with the S2. Why would this be?

Here's another interesting thing. I also installed the S2 on my crappy old Celeron laptop, and here it is able to run flat out at 6 MHz without buckling! Now THAT surprised me. Running additional software, such as Bandicam, just made the audio stutter very badly. I think my desktop just got a stage nearer undergoing a full format and reinstallation.

As you know, my laptop is much quieter and so I have been able to see low level traces which are just that bit too low for audio, but I am sure I could see traces 'of Remda on 107.6 and possibly Berlin on 107.5. Kreuzberg Rhon and Heidelstein have been received almost noise free at times this afternoon. This is with teh S2 and pre-amp, using the S2 software.

I still prefer the nice clean (though far from hi-fi) and relatively noiseless audio of the XDR. That soft mute really knocks out the stereo hiss and greatly reduces background mush in the absence of a signal. I wish that facility was available on the S2 or SDR Console software as it can be hugely beneficial at times (that could be a hint to the designers!).

So, after spending a good part of the day playing with the S2, making comparisons and receiving help from several very kind people, I have been able to get this unit performing superbly. But you might want to consider these two points if you are thinking about buying an S2: Consider you may need to have a good quality pre-amp (providing you are not in a super-strong signal area) while also being aware that the S2 represents a very different way of playing radio.

John

Hi Tim I received Skyline FM 87.7 on Sunday afternoon with RDS and the PS:ELE FM but listening to Caroline jingles they announced themselves as Skyline FM.
I wonder if they have got the RDS kit off someone and not changed the PS.

I don't know if this is the same Skyline that operates from the West Midlands if it is they are running a lot of power.

Andy

35123. Destiny 105.1 FM East Oxford

Yahoo group: SkywavesDX (2014)
Date: 2014-11-14 22:00:14 UTC
From: nick gilly
Topic: 35123 Message: 35123

I have heard weak soft pops on 105.1 here beaming north and tonight have matched it up to Destiny FM's webstream. This frequency is listed as OX105 and is CLOSED according to FMLIST, so this information needs updating. It is a community station serving east Oxford according to their website. There is no information about the location of the TX or power used unfortunately.

Good DX.

Nick, Whitchurch, Hampshire.

had the rx 87.7 on since 7, nowt 'ere
been following the welsh rally, its been a useful exercise
surprised to get Kimnel parc (rhyl) as when travelling to wales - one
goes over a "hump" just inside wales then reception changes completely

so surprised this path is open for a 25w

can perhaps now be a little more confident about my tentative
reception of Conway and whatever the Llandudno tx on 90.6 is called

nice, it was never that strong here.

the following were on on the 15th:

Deeside - distinctive carrier wobble
chirk castle- slightly LF of nominal frq

Clocaenog forest
Dyfnant forest - one of these last 2 was slightly HF of nominal

35141. Low VHF list

Yahoo group: SkywavesDX (2014)
Date: 2014-11-17 20:18:41 UTC
From: Paul Logan
Topic: 35141 Message: 35141

Hi all,

the following is a list of Low VHF signals heard here over the last couple of years. It's warts and all, with lots of UNID's and info missing (I have a LOT of recordings to go through one of these days) I'm posting this info now so that it will be of use to others while we have some conditions left.

It would be great if others could post similar.

Additions and corrections welcome.

In any case, enjoy.

35146. Christmas FM goes live on November 29th fr om Dublin It’ll be on nine FM frequencies

Yahoo group: SkywavesDX (2014)
Date: 2014-11-18 17:15:52 UTC
From: Brock Whaley
Topic: 35146 Message: 35146

Christmas FM goes live on November 29th from Dublin Festive charity station Christmas FM is getting ready tolaunch on November 29th at midday for another month-long broadcast. The station, which raised over €80k last year for the AWAREcharity, is this year hoping to raise money for Age Action. Centra are tosponsor the station for the second year in a row. Christmas FM is once again based in Ballsbridge Hotel inDublin, had a number of volunteer presenters and could be heard on FM in mostmajor towns and cities around Ireland. It’ll be on nine FM frequencies, along with the online andsmartphone feeds. Christmas FM operates on FM annually using a 30-day temporaryradio licence issued by the Broadcasting Authority of Ireland. During the30-day FM licence, Christmas FM operates a live programme schedule from 7am tomidnight each day. Christmas FM Frequencies from November 29th: Dublin – 94.3 FM Kildare – 88.1 FM North Wicklow – 99.5 FM Cork City – 106.7 FM Galway City – 89.5 FM Limerick City – 105.5 FM South East – 103.8 FM North East – 101.6 FM North Midlands – 99.4 FM(via Brock Whaley Limerick)

Hi Nick, folks,

I would say, this MS season, the peak season
lasting from August to February, has
been disappointing so far. Almost very
disappointing. I just wouldn't know what is wrong
with the rocks. Maybe the skies got annoyed by
the Philae lander intruding the P67? Or the
mankind just scared the rocks away, with the ESA mission?

BTW: The Philae also carries some finnish
engineering. The instruments gathering data of
humidity and water are made in Finland.

I have some, more comprehensive MS related stuff
coming up, after I upload one particular audio clip.

73, ilkka

Hi Tim, folks,

Tim, you wrote:
<<<<meteors have caused e skip!>>>>

-
LAST AUTUMN and winter, I purposely did some,
time consuming "on-line-research", as to
correlation between different propagation modes:
MS, Es and tropo. Now I am referring merely to band 2, CCIR-FM reception.

-
Es+MS:
One thing I am by now sure of is, double skips
Es->MS are a fact. I have noticed, a few of you
fellow DXers also support this theory, at least
one active Finnish, and one active Swedish DXer.
I myself have some MS catches in the 2.800 to
3.300 km region by distance, and that distant MS
bursts can not be explained by anything else but a double hop: Es + MS.

On few occasions, the current DXmaps loggings and
the presence of Es layer have comfortably fit
this theory. What I have noticed is, the Es skip
proceeding the MS skip, likely is in the region
of say 1.700 to 2.000 km, and the factual MS skip
i.e. the second hop is something around 1.200 to 1.500 km.

-
MS AND TROPO:
What I believe to have noticed is, very high
meteor activity momentarily creates tropo-like
conditions. As far as I can remember, it was the
Orionids last year which especially proved the
tendency for momentary tropo layer formation.

Very high rate, peaks of multiple small particles
burning up in the atmosphere, seemed to cause
tropo conditions lasting for some 60 to 120 seconds max.

-
MS AND Es:
"Meteors have caused e skip", Tim wrote. A year
ago, when I was very active on MS monitoring,
what I believe to have noticed is as follows.

Es conditions up to 50 MHz and beyond just about
to be forming, go hand in hand with low-power MS
skips. That is to say, the Es layer is too weak
to carry signals by itself, yet the MS enhance
the conditions. A year ago autumn and winter, I
had these some MS catches in the range 30 to 200
watts transmitters, and practically by every
low-power MS catch there was "almost Es
conditions" present. The low-power MS bursts
actually sounded very Es-like, yet there was no
evidence of factual, concrete Es conditions: for
instance no Es loggings beyond 50 MHz..

-
LAST AUTUMN and winter, I intenionally saved some
samples of mixed-mode MS propagation.
Unfortunately, I can not hereby present those
samples to you, as the clips are buried in my
hard-drive and C-cassette piles. "Do it right now
or you'll never get it done", I would say.

Instead, I am enclosing a sample of just a back
few days, November 16th. I hope Günter does not mind my using his platform.

http://www.fmlist.org/fm_media_show.php?id=6800263&media=sound&itu=S

The clip is on 92.4 MHz. There was a massive MS
burst lasting for 3 to 4 minutes, bringing in RBB
Kulturradio Berlin 1.300 km away [on the clip,
the violin concierto]. In the aftermath of the
burst, Stockholm Sweden transmitter 600 km away
popped in. There was absolutely no tropo
conditions around, I bet the Sweden-QSO was
momentary tropo layer created by the MS.

35154. Skegness Leonids Log: 2014

Yahoo group: SkywavesDX (2014)
Date: 2014-11-21 14:18:09 UTC
From: John Faulkner, Skegness
Topic: 35154 Message: 35154

The Leonids were disappointing this year and didn't really get started until the 18th. But thanks to the amazing RDS capabilities of the Elad SW2 software I managed to decode an enormous quantity of RDS. DXers report that the RDS of the SW2 software can be improved upon by feeding the audio into RDS Spy via VAC, but no prizes for guessing that it didn't work for me. A friend also tried to configure this for me via TeamViewer but also failed, perhaps because of the usual problem of my non-standard soundcard, a Midiman "Delta 66". I will look at this again at some point, but I am enormously impressed with the S2 by itself on band 2 so far. SDR Console adds a new dimension to this too with its Data Analyser, which shows the pings and bursts in a JPG, so you know exactly where to look on the recordings, saving hours of real-time playback. The RDS performance on Console is also superior in some respects. Using the right combination of SW2 and Console has opened up meteor scatter DXing to new levels. Even low powered signals are producing RDS.

For the rest of my logs and comments, please visit the BB version of Skywaves at: http://skywavesdx.org/

I will collect videos along the way and post to my YouTube page at: https://www.youtube.com/user/g1vvp

Good DX!

John

Date: 2014-11-21 19:11:13 UTC
From: John Faulkner, Skegness
Topic: 35155 Message: 35155

Recorded this morning via meteor scatter on 90.4:

https://app.box.com/s/iinqouvadbzqvbb3uros

"Rock Channel Kult Klassiker".

Could this be Bayern 1? There is a 500 watt transmitter in Passau listed, but also, could anybody else also be carrying this on a common overnight programme?

Thanks.

John

"Kult-Klassiker" is a label used by MDR Jump - 90.4 Leipzig, 100 kW.

73,
Günter

Thank you Nick, Hannu and Franco.

There was a burst of Italian DX overnight at this time. Probably my Radio Capital on 88.6 was also Castel San Pietro. Other Italian stations were ID'd by PI codes but the sites are too many to be certain.

Very many thanks and good DX!

John

35165. FMLIST UK question

Yahoo group: SkywavesDX (2014)
Date: 2014-11-22 17:06:31 UTC
From: Günter Lorenz
Topic: 35165 Message: 35165

FMLIST has BBC Radio Wales from Merthyr Tydfil on 96.1, but OFCOM has it on 103.7 in all their current online files.
Anyone in the area able to hear the signal?

73,
Günter

Don't worry Nick. I wasn't sure if it was Spanish, Italian or Slavic from what I could hear, but I didn't recognise the ID as that of Radio Monte Carlo. Now I can hear it clearly!

35203. WDR4 Night Service IDs

Yahoo group: SkywavesDX (2014)
Date: 2014-11-30 15:02:27 UTC
From: John Faulkner, Skegness
Topic: 35203 Message: 35203

Thought I'd ask this, though I know it's probably a long shot.

At 0305 this morning I have "WDR 4" IDs on 90.7, 91.3 and 91.4. Is it possible to know which stations these IDs might belong to? I guess 90.7 is obvious, i.e. Munster, but who would carry these IDs on 91.3 and 91.4?

Thanks

John

35204. Re: [SkywavesDX] WDR4 Night Service IDs

From: nick gilly
Topic: 35203 Message: 35204

Were these meteor scatter or tropo John? I think WDR 4 is carried overnight by stations that have a light pop format so 91.3 might be Bayern 1 from München-Ismaning or NDR 1 Welle Nord from Kronshagen (Kiel). 91.4 could be Bayern 1 from Büttelberg or even SWR 4 Rheinland-Pfalz from Mainz-Kastel.
Certainly in the past WDR 4 and these sorts of stations have all had shared overnight programming when I have received them via tropo in the past.
 Good DX.

Nick, Whitchurch, Hampshire.

Subject: [SkywavesDX] WDR4 Night Service IDs

  Thought I'd ask this, though I know it's probably a long shot.

At 0305 this morning I have "WDR 4" IDs on 90.7, 91.3 and 91.4. Is it
possible to know which stations these IDs might belong to? I guess 90.7
is obvious, i.e. Munster, but who would carry these IDs on 91.3 and 91.4?

Thanks

John

Thank you Nick and Peter.

No disrespect Nick but I am going with Peter on this as I am sure he knows which network carries which at night. I used to have a website bookmarked which listed who carries which networks at night but that's long gone. I cannot always tell from the websites, even when using translation.

Yes, these were received via meteor scatter this morning. My antenna was east at the time but that is irrelevant with MS as signals can arrive well off-beam.

Many thanks.

John

5kw IIRC
nice catch!
94.3 is unusable here- i recently found out (courtesy of fmlists
amazing new functions) that Haslingden is line of sight for me! so no
wonder i can't shift it!

Andy,As far as I can tell, they are using the 1 kw transmitters set aside for RSL's. Cork 106.7, Galway 89.5, and Limerick 105.5 are all being heard here. The signal strength of Cork and Galway leads to me believe that 1 kw is about right. I know these three frequencies at least have been used for limited license stations.73'sBrock

hello!

That’s not really true about Sweden.

A study about the future for broadcast in Sweden was presented this Monday. You can say it’s in favour for the DAB lobby organisation. No other distribution formats have been subjects for inquiries, nor DRM+ , DVB-T2 Light or several other formats.

The commercial radio wants to switch over to DAB+ as soon as possible but not without help from SR. Why? Then want to distribute more channels. Today only two major actors are controlling the commercial radio: MTG (Modern Time Group) and SBS Media.

Even if the channels have different names the music is almost the same.

Some experts says DAB+ is not the right format. It’s an old format with worse sound quality than FM.

The study isn’t really independent since Teracom has economical interests in switch over to DAB+.

But the demand among common people for DAB is colder than cold.

SR began with DAB for the first time in 1995. It was a failure. In 2004 the minister of culture Leif Pagrotsky decided to switch off the DAB-net due to hight costs and few listeners. DAB was only kept as experimental transmissions over Stockholm, Göteborg, Malmö and Luleå.

And it’s an environmental issue also when at least 20 million receivers will be subject for recycling.

The study says 2022 will be a appropriate date for switch over. Now the government have to take the decision, maybe springtime 2015.

But I think spring 2015 is too early.

/Chris

Onderwerp: [ICDX-TVFM] RIP Rijn Muntjewerff

Gentleman,

I'm not sure if this has been reported here or is known to the folk downunder, but Rijn Muntjewerff has passed away aged 81 years of age. This was posted in Dx Antwerp by Marc Vissers.

You will have to translate it in Dutch - English but it basically says he passed away on 27 November and will be cremated at Purmerend, just outside of Amsterdam December 3.

RIP to Rijn. A fine dxer.

73

From: Günter Lorenz
Topic: 35221 Message: 35225

WorldDMB is doing a great job as a lobby organization. Don't expect them to praise FM.
Every AM tower blasting is a secure step on the career
ladder. FM has another lobby: The listeners (=citizens, =consumers).
What the DAB lobby doesn't tell is that the FM "switch off" is valid only for the public broadcaster, and the big commercial guns.
Naerradio in NOR and S will most likely remain on FM (Christian please correct me). They can't afford the Rohde&Schwarz et.al. gear / Teracom/Norkring sites. OTOH, low-cost, open source DAB solutions are available, as we can see in Zurich and Geneva, and will turn up sooner or later. DRM+ is not dead either. The game is open.
DAB is dangerous for smaller radio stations in the same way as DVB-T for smaller TV stations: No problem for public broadcasters and for the big guns. But any smaller player will a) not be able to provide more than one service, and b) will have to compete at equal ground with the others, losing all advantages he had from having his own, distinct frequency on the dial. With DAB, all your competition is only one click away, with the same reception conditions. On the other hand, DAB offers space for real new services. Why don't we have a nationwide Jazz radio in Germany? (no FM frequencies available). Why don't we have the main program of all EU countries public broadcaster all over Europe (no FM frequencies available, old-fashioned license systems)?
Also, I'm curious about Switzerland: If they switch off all FM, and I am as tourist travelling by car to Switzerland, I cannot get any radio anymore. How will I be warned of ghost drivers, or of problems in tunnels? Will I be obliged to have DAB (including "radio check" at the border, having to buy a compulsory DAB+ receiver, like the motorway toll) in my car?
I've got one more ... there is a current advertising campaign in Germany for digital radio. The slogan is "because I want it". This is what little children tell you in the Lego shop, when they don't have any better arguments. I want summer, now! Why? Because I want it!
But let them switch off FM - the DXers future is bright. Imagine FM-DXing on an empty dial in the heart of Europe! Long live double-hop!

73,
Günter

Well, närradio (community radio) has the possibilty to maybe use DRM+.

But I think the money will decide which format Sweden will adept.

Anyway there is a strong favour for this obsolete format DAB+.

What I've understand EBU hasn't declared DAB+ as the only broadcasting format.

One argument I've heard is that we must switch over to DAB+ because our neighbour countries have DAB+, to be compatible with their standard.

Such an argument feels a bit "thin".

In the case Norway they are saying the goal at least 50% of the listeners has turned over to digital radio = DAB+ is achived. True and not true.
Not only DAB+ is declared as digital radio but also internet radio and radio through cellphone network are bunched into digital radio.

Some say DAB means "Dead And Buried"...
In France, DAB+ for public service has been stopped by the government due to too high costs. Commercial networks show no interest and continue sending FM.

In India, when issuing several hundred new radio station licenses, all were on FM.

In Sweden, the main network operator Teracom is planning to update the FM transmitter network. Why do this if you intend to shut down FM?

>Not only DAB+ is declared as digital radio but also internet radio and radio through cellphone >network are bunched into digital radio.

That’s how they play around with figures in order to claim DAB usage that actually doesn’t exist.

In the UK, an entire book has been written about the methods and statements made by DAB lobbyists, Dab Digital Radio: Licensed to Fail
http://www.amazon.com/Dab-Digital-Radio-Licensed-Fail/dp/095649630X

http://www.amazon.com/Dab-Digital-Radio-Licensed-Fail/dp/095649630X

While working for Sony Ericsson and being responsible for their broadcast media roadmap, I often got some odd statements from DAB lobbyists, including downright lies! Like “40 countries will convert fully to DAB within 2 years” (statement made more than 6 years ago…), or “We can prohibit implementation of FM in your mobile phones if you don’t support DAB” (said by a Norwegian lobbyist at NRK).

In many ways web radio is the bigger threat to DAB than FM. Consequently, I have seen one DAB lobbyist actually suggested prohibiting the use of web radio in the UK.

Sometimes it is interesting to see the digital radio lobbyists fighting among themselves, some favor DAB/DAB+, others favor DRM+, again others favor HD radio and in Japan ISDB-T, none of which can ever gain the worldwide acceptance that FM has.

FM is in no need of replacement.

Also, DAB/DAB+ is not likely to be supported in mobile/cellular phones because of:
No customer or network operator requests
The royalties involved per sold unit, while FM is for free
The much higher current consumption compared to FM
DAB/DAB+ is no worldwide standard and never will be
DAB/DAB+ is not included in any mobile platform connectivity chip (for the reasons above), so some extra chip + software integration would be needed = longer project time and more resources needed along with higher costs…
The inferior DAB/DAB+ sound quality, which is obvious when using good earphones
The irritating DAB weak signal behavior (intermittent sound etc), especially in mobile situations
The difficulty of combining FM and DAB antenna solutions in a mobile device

There is a need for information free from lobbyism:

35235. DABLIST updates wanted

Yahoo group: SkywavesDX (2014)
Date: 2014-12-03 17:17:20 UTC
From: Günter Lorenz
Topic: 35235 Message: 35235

The NOXON DAB Stick and similar devices based on the RTL2832 chip can be used to document what is on the air in DAB. While the original NOXON stick automatically writes a file when used with the Fraunhofer software, there is a nice alternative software: DAB-Player, a powerful freeware created by Andreas Gsinn from Bavaria. One of the greatest features is the display of SNR on a specific channel, very useful to find optimum antenna directon or when hunting for DX signals. Also this software can export MUX configuration data, and I'd be happy to get such data files for as many MUXes as possible. Here is a small document how to export the data, including download links for the software:

http://www.fmlist.org/ How-to-export-DAB-FIC-Multiplex-Configuration.pdf

Thanks in advance!

73,
Günter

35236. Voice of Africa Radio.

Yahoo group: SkywavesDX (2014)

Topic: 35236 Message: 35236

Hi list,

For about a week now I've been unable to hear Voice of Africa Radio on 94.0. It comes from East London and puts out a pretty good signal (although the audio quality is terrible). At the moment I'm getting nothing, not even a blank carrier.

Is anyone else able to hear it? Have they gone off air? I did check their web site (http://www.voiceofafricaradio.com/) and they are still streaming…

Regards,

Martin

Thanks for this assessment of the state of DAB in Europe Peter. There is far too much propaganda and spin put out by DAB lobbyists as you say, and I regularly come across it on the Digital Spy forum but there's a few of us on there who are trying to put them straight. It's a real shame that Grant Goddard has finished posting on his blog as he was the 'go-to' source if you wanted to find out what was really happening behind the scenes. The public need an easily-accessed unbiased source of information free from vested interests. There was a study from a University in Sweden that concluded that to match or beat FM audio quality using DAB+ (AAC+ codec) the bit-rate needs to be between about 160-192 kb/s as a minimum:
http://www.radiojackie.com/im/paq.pdf
So If the decision is made to do a full switchover of the BBC national stations in the UK from FM to DAB (which mostly use 128 kb/s in the original MP2 codec) then the only way to receive them in equivalent quality after switchover would mean accessing them via the internet, which is not free at the point of use. Now how could that be a benefit to the consumer? I could imagine it may well form the basis of a judicial review...But hopefully with any luck it won't happen.

If I'm reading the translation right then the article in Swedish on your last link titled Danmark inför beslut om att behålla FM-radion is suggesting that Denmark is abandoning plans to switch off FM. Is that correct? Good DX.

Nick, Whitchurch, Hampshire.

| |

While working for Sony Ericsson and being responsible for their broadcastmedia roadmap, I often got some odd statements from DAB lobbyists, including downright lies! Like “40 countries will convert fully to DAB within 2years” (statement made more than 6 years ago…), or “We can prohibitimplementation of FM in your mobile phones if you don’t support DAB” (said bya Norwegian lobbyist at NRK).
In many ways web radio is the bigger threat to DAB than FM. Consequently, Ihave seen one DAB lobbyist actually suggested prohibiting the use of web radioin the UK.
Sometimes it is interesting to see the digital radio lobbyists fightingamong themselves, some favor DAB/DAB+, others favor DRM+, again others favor HDradio and in Japan ISDB-T, none of which can ever gain the worldwide acceptancethat FM has.
FM is in no need of replacement.

Also, DAB/DAB+ is not likely to be supported in mobile/cellular phonesbecause of:No customer or network operator requestsThe royalties involved per sold unit, while FMis for freeThe much higher current consumption compared toFMDAB/DAB+ is no worldwide standard and neverwill beDAB/DAB+ is not included in any mobile platformconnectivity chip (for the reasons above), so some extra chip + softwareintegration would be needed = longer project time and more resources neededalong with higher costs… The inferior DAB/DAB+ sound quality, which isobvious when using good earphonesThe irritating DAB weak signal behavior(intermittent sound etc), especially in mobile situationsThe difficulty of combining FM and DAB antennasolutions in a mobile device There is a need for information free from lobbyism: http://digitalradioinsider.blogspot.se/http://grantgoddardradioblog.blogspot.se/http://www.grantgoddard.co.uk/articles.htmhttps://translate.google.com/translate?sl=sv&tl=en&js=y&prev=_t&hl=en&ie=UTF-8&u=http%3A%2F%2Fdigitalradion.blogspot.se%2F&edit-text=&act=url

NO - That is not correct, FM is to shut down in 2019 here in Denmark. If 50% of the listners is listning via digital Radio (DAB/DAB+/Internet a.o.) in medio 2018 - Same way as in Norway. That is stated in the new Media law from this year 2014. And the non-commercial radiostations will have to transmit only on the Internet. If the test transmissions tells the Politicians it is the right way to transmit non-commercial Radio.
more here in danish:
http://www.kulturstyrelsen.dk/medier/radio1/digital-radio/justeret-koereplan-for-digital-radio/

And just today the DAB 3 regional network has been send out for applications, only If there are more than 16 qualified bidders in a region, the Radio and Television Board will carry out an assessment of the bidders based on their attractiveness.
Read more about it here in english:
http://www.kulturstyrelsen.dk/fileadmin/user_upload/dokumenter/KS/medier/radio/Digital_radio/Udbud_DAB-blok_3/English_summary.pdf

Hi Peter,

This is what the danish politicians has agreed, and it is in the new danish media law from this year. End date for FM is 2019 here. Change from DAB to DAB+ is planned in 2015.

It is not like Sweden where the politicians hasn't decided an end date - There is Talk about 2022/2024 but it is not decided yet.

And don't forget that 21 stations has got an National License for DAB+ in Sweden a couple of month ago.

I just feel sorry for them, fooled by lobbyists, as they waste money on inferior technology, and try to dictate people into doing the same. If this comes true, radio as medium will suffer greatly. We will see what happens if they run out of money.

> And don't forget that 21 stations has got an National License for DAB+ in Sweden a couple of month ago.

...which says nothing about receiver sales or number of listeners, if you go by what takes place in other countries.
Do not let them include web radio or radio on mobile phones listeners etc as they add up the "DAB listeners".

35263. Airspy feedback

Yahoo group: SkywavesDX (2014)
Date: 2014-12-06 17:29:41 UTC
From: sdrsharp
Topic: 35263 Message: 35263

Hi,

Did someone test an Airspy on real world DX conditions? Any feedback is welcome :-)
Thank you.

Youssef

35264. 36.57 is Russian Military

35289. Hitradio ID on 100.2 via MS

Yahoo group: SkywavesDX (2014)
Date: 2014-12-10 12:19:30 UTC
From: John Faulkner, Skegness
Topic: 35289 Message: 35289

https://app.box.com/s/nf9d4w5pedz16rn254dw

I recorded a "Hitradio" ID on 100.2 this morning via meteor scatter. There isn't much to go on, but I thought one of our German members might recognise the speaker or the accent, as happened with my low power Austrian catch on 103.0. It struck me as unusual that the speaker sounded very laid back considering this was a "Hitradio" station. Then I looked on the FM List and I can only see one "Hitradio" station listed. It's in Austria and uses just 10 watts. Unless there are other German language stations which use this "Hitradio" slogan on the frequency, either in Germany or Switzerland, etc. then I wonder if I actually have the 10 watt station in Austria. Hoping somebody can help.

Thank you.

John

To me it sounds like the start is the last part of "Sachsens" and then
"Hitradio" - And that would be Energy Sachsen from Dresden with 5 kW.

Hello Niels.

Thank you for this. I have just discovered, thanks to very kind help from G?nter, that this is a jingle from Antenne Bayern. They have adopted the "Hitradio" slogan at some point and you can just hear the end of the word "Bayern's" before "Hitradio". So not the 10 watts Austrian as would have been nice, but the much more powerful Gelbelsee transmitter.

Thanks Niels.

John

Hi Paul,

I guess you may have to keep using an external antenna.

I had a similar issue with my Roberts Stream 83i (DAB/DAB+/FM/Internet) radio. It appeared to be "deaf" on FM, until I connected an external antenna. The device was picking up its own radiated RF interference. This wasn't interference from its Switch-mode PSU, but from the receiver itself.

Cheers,

Chris. Lincoln, UK. 2E0NDT

HI All,
the MUF briefly reached 39.06 for a few minutes at 1532utc producing
some very weak and noisy Police traffic

some fast morse ID's from utility companies on 37.46,37.7 & 37.62

on 32.18 there was a 2nd SS stn (om) with CTCSS of 141.3hz @ 1500utc

I think the following wavebuoys may be from the irish sea:
29.985, 29.950, 29.890, is this supported or contradicted by anyone
elses loggings?

From: ilkka suni
Topic: 35321 Message: 35322

Hi Jürgen, folks,

AS IT APPEARS, the Geminids maximum this year
happened roughly from 00hrs UTC to 02hrs UTC, on
Sunday 14th December. The Sodankylä observatory radar
http://www.sgo.fi/Data/RealTime/meteorRadar.php
echo count peaked as high as 500!
I am not quite sure whether the count is strictly equivalent to ZHR.

As you all know, the Geminids favours especially
visual observation up here in Northern Europe.
.

I HAVE A FEW OF these "graveyard" frequencies,
like 102.3 MHz, with a wide range of reasonably
powered transmitters from east to west, and
roughly around 03 to 06hrs UTC the frequency went nothing but berserk:
already on December the 13th.
By the human ear, it was practically impossible
to keep up with the pings, the rate was so dense.
.

LUCKY ENOUGH, in my location there was neither
tropo nor aurora blocking the band, and I could
do some rewarding digging on the upper end FM
frequencies, the frequencies which usuallly are
blocked by ground-wave and common tropo signals.

For instance, I managed to make some catches even
on 107.8 MHz, In my location, in the summertime
the upper end of the band is jammed all day all
night, even when utilizing 50...80 kHz IF filters.

Anyway, the high MS season still lasts for a
couple of months more, so keep your gear tuned, folks!

Hi All,
Lots of the usual US East Coast Activity over the last few days 30-34Mhz.

However, new for me yesterday, some sort of utility company on 33.48 Mhz with a fast CW ID of what sounded like KES912 or KEU912. Mentioned 'Amber Ridge' shut down and road closures.

Also today, 32.075Mhz some sort of Airport dispatcher with 'engine start and aircraft cleared'. Any info on where this may be from ?

Regards

33.48 = Ulster County NY

32mhz is Military IIRC, Paul Logan will know

Here's an ID I recorded this morning. It sounds like the German language but I cannot be certain. I am sure they are saying "Radio Holiday" but I don't see anything listed. Does anybody know more?

Thanks

John

It appears to be a station in the Südtirol region of Italy John but curiously neither their website nor FMLIST has them listed on 104.2:

Holiday empfangen - Radio Holiday
| |
| | | | | | | |
| Holiday empfangen - Radio HolidayRadio Holiday: einfach mehr Hits! |

Cheers John and Nick from windy Espoo,

Could also be Ö3 from Austria,..or from Italy this R.Holiday from Bolzano (Brunico in german). Normally on in Italian Alps mountains and valleys 104.2 are Tele R.Vinschgau and R.Tirol..but I remember BZ province to be a real nightmare to follow when edited this to European FM Handbook in the 90's and beginning of 20's. Lists are always abit behind from the real live world..

Thank you Nick and Hannu.

I don't see an Ö3 on 104.2. As for Radio Holiday. Nothing? Well. Another surprise if so. This was the only station coming in via meteor scatter at this moment.

I will listen to Radio Holiday and see if I hear any matching jingles.

Thanks

John

Yes. 100% the same female speaker on the web stream, so it IS Radio Holiday from the Italian Tirol region. Just need to try to find out the transsmitter if possible.

Hello Alessandro.

I stayed in this area a few years ago. Such a fascinating place and amazing scenery. I stayed in Ortisei Sankt Ulrich. The hotel owner told me there was a local language, spoken in two or three villages called "Ladin", though I have probably forgotten the exact detail.

Regarding the translation notes, thank you for the clarification. This is quite confusing for us when there are two or more spellings for each town and village.

Here is a montage recording of my recorded ID, against an online ID I recorded from the station's web stream. It's not exactly the same jingle I heard during the early hours of this morning, but it's the same YL voice.

https://app.box.com/s/l8xuyp5ba7potdxhal3u

Thank you and best DX!

John

Mount Carmel is a town in the Southern part of Illinois. Seeing as you had a variety of Illinois stations, look for a town in that area. Mount Carmel Road would literally be just that, the road to Mount Carmel. Check for stations located on the highways radiating from that town.

Hi Tim,

If the call starts with a Z, could it be either of these two?

50043.2 ZL1VHF Auckland RF73MB 15 Omni A1 24 1114
50044 ZS6TWB Polokwame KG46RC 30 5/8 Vert Omni A1 24 1114

I believe ZS is South Africa.

73,

Chris 2E0NDT

Hi Stuart,

According to G3USF's Worldwide List Of 50MHz Beacons

Updated 16 December 2014

50044 ZS6TWB Polokwame KG46RC 30 5/8 Vert Omni A1 24 1114

Last report from it November 2014

So it should be QRG

73

Chris

this is interesting, the RDR is vastly more sensitive than the R9500
(which can't get the beacon) but the freq is off on 6m

the RDR is better at rejecting noise

35404. 96.1 Irish station on meteor scatter

Yahoo group: SkywavesDX (2014)
Date: 2014-12-22 18:38:20 UTC
From: John Faulkner, Skegness
Topic: 35404 Message: 35404

Does anybody know who this partial ID belongs to?

https://app.box.com/s/yatln5hsduzpa4wyg0e1

Recorded at 0800 this morning. Unfortunately, I am unable to listen to web streams at the moment due to problems with my soundcard and computer following a re-installation of Windows 7 and contracting a virus. I don't think Midwest Radio has a working web stream at the moment either.

Thanks

John

35405. 97.1 Irish station on meteor scatter

Yahoo group: SkywavesDX (2014)
Date: 2014-12-22 18:58:03 UTC
From: John Faulkner, Skegness
Topic: 35405 Message: 35405

Another one.

https://app.box.com/s/d55z06s7y27s47pn7ij5

I have had another go at getting VLC and Winamp working but I have failed. Otherwise I would have been able to record the top of the hour IDs to compare.

Hoping somebody can help.

Thanks again.

John

You're were right about the backmasking Hannu. I reversed the recording in WaveLab and clearly hear "We have taken over your planet. Resisting is futile you puny earthling, but are happy to confirm your reception of the planet Zob. Our engineer is most impressed".

Your links have no audio on my computer. My Elad has audio. I can record audio (with some difficulty) in WaveLab, but nothing 'audio' online works. YouTube, etc. It's just another one of those 'That's impossible! It could only happemn to John Faulkner" moments. I do have a cure though. A large hammer, raised to a great height and lowered at speed on to my computer. Then I will never have problems with that sound card ever again!

I have found Midwest Radio on my Roberts internet radio and so I will listen to that on the hour. I didn't realise to begin with that those two IDs are probably the same, which probably /would/ point to Midwest Radio. Quite unusual to say I was beaming north-east this morning. But that's meteor scatter for you.

Let's see if I can break anything else.

John

No IDs of this sort at the top of this hour on Midwest Radio, but I will keep listening. I suspect it has to be this station.

By the way Hannu, regarding "pretty or die..", this is "radio.ie", a web address. I presume this is what you were referring to.

Cheers

John

35410. Re: [SkywavesDX] 96.1 Irish station on meteor scatter

Yahoo group: SkywavesDX (2014)
Date: 2014-12-23 00:07:36 UTC
From: John Faulkner, Skegness
Topic: 35404 Message: 35410

I caught the top of the hour ID from Midwest Radio at midnight. The ID
is the same one as on my recording.

So that's 96.1 Kiltimagh with 5kW and 97.1 Achill Island/Minaun Heights
with 1.5kW.

What other mode of propagation could allow reception of these two?
You've just got to love meteor scatter.

John

You're absolutely right, John. Thanks to MS, I have caught numerous
stations, i.e. transmitters, which I believe would not be possible via Es.

MS takes time and effort, yet it's worth the pursue. And, I have
notived, those strictly stuck with Es and tropo, and not being
familiar with MS let alone quick live stream comparision, sometimes
find it hard to believe what can be achieved via MS.

Anyways, John, folks. Let your Christmas keep going merry. New Year
is going to be rocky for sure, there's the Quadrantids meteor shower
getting by, with lots of prominent pings.

73, ilkka

Hi All,
Just thought I'd share this video with you of the difference between the Elad fdm-s2 and RDS spy data conversion.
Sadly I was unable to add audio, but if watch the video you will see that RDS spy is the narrow winner.

http://youtu.be/HEjng4QBd50

Happy Christmas

From: Brock Whaley
Topic: 35424 Message: 35424

Merry Christmas and good DX to you all!Brock WhaleyCo. LimerickIreland
The Queen has broadcast her Christmasmessage every year except 1969, because of a surfeit of coverage of Charles’sinvestiture as Prince of Wales that year. In 1957 she agreed to it beingtelevised live. Freak atmospheric conditions caused US police radiotransmissions to interfere with the broadcast and at one point some listenersheard an officer say: “Joe, I’m gonna grab a quick coffee.”The 3pm time slot was chosen in the 1930’sas the best for reaching most of the empire by short waves from transmitters inBritain.

That is very impressive Damien. There's no real comparison in terms of speed.

After a lot of experimentation over the last few weeks I have to conclude that my Delta 66 sound card and VAC just don't see eye to eye. Yet another computer re-installation had been done over the last couple of days and I have discovered that there is also a problem with the Realtek HD sound card on my motherboard. I need to get this one fixed asap and kick out the (twelve year old) Delta 66 as it has caused me so many problems over the years. I hope to get the Realtek card working soon.

Cheers!

John

35430. Mystery German PI Code

Yahoo group: SkywavesDX (2014)
Date: 2014-12-26 16:57:12 UTC
From: John Faulkner, Skegness
Topic: 35430 Message: 35430

Received by meteor scatter this morning.

http://youtu.be/5Hkf0OyLiz8

There isn't a PI code DD8A listed, but I wondered if this was a change in PI or, more likely, a local opt-out PI code?

I note that a Radio 21 Süd in Göttingen Bovenden has a PI code of D38A which is very close. Perhaps it's this?

Thanks

35431. Re: [SkywavesDX] Mystery German PI Code

Thanks to Rinardo Poeta for looking at my video recording on YouTube.

It looks like DD8A is a new (or regional??) PI code. Rinardo identified a commercial for "Intersport Schwager", a sports shop situated in Holzminden in the locality of this transmitter. This does seem to be Radio 21 /Süd/ in Göttingen Bovenden, listed with only 1kW!

Thanks Peter.

Commercials were being aired at the time so that could explain it.

Our Classic FM network do the same thing. C2A1 is the national PI code
for Classic CM but I noticed this changed to C6A1 during local adverts
recently.

35437. Goodbye Megane. Hello Picasso! But what is the radio?

Yahoo group: SkywavesDX (2014)
Date: 2014-12-27 23:33:32 UTC
From: John Faulkner, Skegness
Topic: 35437 Message: 35437

For some time now I have been aware of the ever increasing amounts of rust on the chassis of my nine year old Renault Megane. More recently I have been aware of a metallic creaking in the driver's side foot well. This has gradually deteriorated into a hole and the general condition of the car is not good and is approaching that 'beyond economical repair' point. A lot of work needs doing to the steering and the suspension, plus various other parts on the car I suspect the sea is to blame for the corrosion, but I am not in a position to waste money on a car which has now seen better days. It has served me well, however, and has been almost faultless until now. I have had this from new and have put 140,000 miles on the clock. The engine still purrs along nicely. So, reluctantly, I have decided to say goodbye to what has become something of a trusty and reliable friend. (Do people in other European countries attached to their cars?)

We will probably be changing the car soon and have decided on a possible model, but silly me did not try out any of the radios first. Well, it's not the most important part of the car, is it. Is it? OK, that was a little short-sighted on my part. As I DXer I should have taken the radio for a test drive first and then looked at the car.

So, I wondered if anybody knows anything about the radio in a Citroen C4 Grand Picasso. A search on Ebay suggests that the radio used in recent models of the Grand Picasso include a "96646223XT", a "96599994" and variants of an RD4XXXX. I have tried Googling for these numbers, also using "Pioneer" and "Blaupunkt" in the searches, but nothing conclusive comes up.

More to the point, does anybody have any idea if Citroen car radios have the same kind of adaptive IF filtering as those with SHARX and Digiceiver, etc? The problem is, the radio is concealed and the controls are on a large touch screen. There is no visible sign of a radio anywhere!

Thanks if anybody can help.

John

35440. Mystery Language via MS on 97.1

Yahoo group: SkywavesDX (2014)

From: John Faulkner, Skegness
Topic: 35440 Message: 35440

http://youtu.be/ln4SmfQYMdo

Here's a blast of meteor scatter I recorded this morning. You will see SR P3 dominates but there is a brief spurt of an unrecognised language towards the end of the recording when the PI F202 briefly takes over. It's not French. It sounds more like a Balkan language to me and definitely not Norwegian. Or could it be Sami?

Thanks

John

Hello John.

It’s definitely not samic language. In my ears it sounds like polish but I may be wrong.

/Chris

Thank you Christian.

So moving back to the Balkan area perhaps? F would fit with Bosnia, but there is nothing listed at all.

Thanks.

Vlad - is short name from Vladislav, not from Vladimir :)

At 00:03 I hear "... trebunish(?) ale ...". "Ale" means "but" in Polish,
Czech and Slovak languages. Ending "ish" very typical for Polish.

Most likely Polish.

Thank you all.

Since the PI prefix for Poland is a very strict 3 and this is an F, I have to cast a doubt on Poland, but I think the best ting would be to assign this one permanently to the "unid" folder. It's a pity there isn't any more of this to go on.

Meteor scatter /conditions/ are not as clear cut as with other modes, but the stations coming in at the time were from either Sweden or Norway.

A mystery! But thank you all for listening.

Cheers

John

:) I missed that one Tim.

I haven't identified a Polish station on 103.2 so far, but there are four good possibilities on the frequency.

You should be seeing RDS from several of the bursts on that file. What software are you using to decode?

Ah - I thought I had posted this here.

https://www.dropbox.com/s/9kc9g66szei6l20/2014_12_14_08_57_28_FDMSW1_Rec_RF_042.zip?dl=0

This is the file we were referring to. It's a minute long recording,
taken from my Elad FDM-S2 on December 14th at 0857 in the morning. This
recording features a good, long duration meteor burst with RDS from
several European stations. Anybody using RDS Spy with the S2 might be
able to decode more RDS than I did.

If you don't own an Elad FDM-S2, you can use SDR Console or HDSDR to
decode this recording. No doubt other software can handle this too.

John

I just had a message from a Rinardo Poeta via my YouTube page and he says he can hear a mention of the composer Gershwin. He also added that he checked the podcast at the same time and can hear exactly the same OM speech as in my recording. So it is NRK P2 from Nordhue.

This means that my initial search for F202 did not reveal the Nordhue transmitter, so I presume some kind of glitch in the search. This does happen on rare occasions.

Thanks again everybody.

John

Another slightly disjointed message on my part but I think you get the idea. The podcast was that of NRK P2.

Maybe it's three stations?

E203 (music) + Poland (at 00:03-00:04, without RDS) + F202 (at 00:07-00:08)

At 00:03-00:04 in record when I hear Slavic language PI not changed. I hear various male voices in record - all of them are present in podcast?

Yes that is what I was thinking Vladimir. There are 3 stations in total, one with pop/rock and 2 talkers, one between 0:03 and 0:04 and briefly around 0:05 (the one that sounds Polish) and what is probably Norwegian mixing/xfading with it (particularly around 0:06-0:07 secs).
 Good DX.

35464. French tropo improving

Yahoo group: SkywavesDX (2014)
Date: 2014-12-30 10:56:54 UTC
From: nick gilly
Topic: 35464 Message: 35464

The tropo to France is improving today with 2 bar/RDS signals from Cherbourg and 2-3 bar/RDS signals from Caen. Other txes such as Les Platons, Laval, Alençon, Le Mans, Brest and Rennes are also improving.

I also heard what sounded like a pirate on 91.8 playing hard house/similar but can only hear it beaming south. Anything past about 150 degrees and BBC Radio 3 from Hastings controls the channel, right the way round to NE, so I'm not sure if this is actually a London pirate or something from the south coast. Good DX.

Nick, Whitchurch, Hampshire.

From: Brock Whaley
Topic: 35465 Message: 35465

RTÉ also attempted to put a stop to stations using illegal frequencies by putting out jamming signals.There was cause for concern as the frequencies being used and the jamming signals impacted on phone lines, as well as frequencies used by hospitals and airports.

Hi all,

I'm quite sure it's Slovenian, and after the word "radio" he doesn't say "crne gore", but I'm not able to understand it and I've no time for listening to the 3 listed stations (Radio 1, Radio Capris and Primorski Val) to look for the adv as tomorrow morning I'll drive to Munich; maybe when I will be back.

Thank you for listening again Alessandro. Very kind of you to offer to listen to the three listed stations. I will try to do this myself though I too will have a lack of time tomorrow, so it might have to wait for a while.

Thanks again and h Have a safe journey.

John

Only very weak so far but definitely France Inter. Culture from Parthenay is also about as well.

Signals from Brest have been very strong. Good DX.

Nick, Whitchurch, Hampshire.

"ah but how does that help me?" i hear you ask!
well Rowridge is 92.900 so if you hear a 3khz het you can confirm that
you're hearing Pontop Pike against Rowridge or vice versa

when i last measured Idle it was 92.898, so i imagine the twin hets
will make it almost unlistenable in fringe areas!

Thanks Andy. There's been a few more in since then:
90.4 France Inter Clermont-Ferrand95.7 France Culture Toulouse Pic du Midi
96.9 RNE Nacional Lierganes98.4 France Culture Clermont-Ferrand
99.3 unid, very weak Spanish talk99.4 unid with music e.g. folk and similar, weak99.8 France Inter Lyon Mont Pilat
103.9 SER Aviles, Aviles in parallel with web stream
Fingers crossed this tropo is still with us by daylight.

Good DX.

...to everybody!

As you all probably know, the Quadrantids meteor shower is active and getting closer to the presumed maximum of January 3rd. Should quarantee pretty reasonable ping rate, though right now running quite low around here.

Don't damage your precious ears with the fireworks, neither your eyes, folks.

73, ilkka

John,

I'm not sure if I have followed this thread properly and if the 103.2mhz Polish was still unid, but I played the file and get a PI code 3401, so PR Radio Opole.

I must say that is an amazing recording. I have no joy with MS at all. Do you use SDR Data file Analyser to pick the bursts out of your recordings or some other method ? The Analyser is good, but runs very, very slowly on my computer.

Simon
